

Contents

Introduction	1
--------------------	---

Part I	Entropies for Finite Quantum Systems
---------------	---

1. Fundamental Concepts	15
2. Postulates for Entropy and Relative Entropy	37
3. Convex Trace Functions	47

Part II	Entropies for General Quantum Systems
----------------	--

4. Modular Theory and Auxiliaries	67
5. Relative Entropy of States of Operator Algebras	77
6. From Relative Entropy to Entropy	101
7. Functionals of Entropy Type	113

Part III	Channeling Transformation and Coarse Graining
-----------------	--

8. Channels and Their Transpose	137
9. Sufficient Channels and Measurements	151
10. Dynamical Entropy	173
11. Stationary Processes	195

Part IV	Perturbation Theory
----------------	----------------------------

12. Perturbation of States	211
13. Variational Expression of Perturbational Limits	227

Part V Miscellanea

14. Central Limit and Quasifree Reduction	247
15. Thermodynamics of Quantum Spin Systems	265
16. Entropic Uncertainty Relations	279
17. Temperley-Lieb Algebras and Index	291
18. Optical Communication Processes	303
Bibliography	315
Subject Index	333
