|------------------------------------------------------------------------|-----------|
| <b>1. General Description of Electron Systems</b>                      | <b>1</b>  |
| 1.1 Classification of Electron Systems                                 | 1         |
| 1.2 Low-Dimensional Electron Systems                                   | 5         |
| 1.2.1 Two-Dimensional Electron Systems                                 | 5         |
| 1.2.2 One-Dimensional Electron Systems                                 | 10        |
| 1.3 Characteristic Lengths                                             | 13        |
| 1.4 Fermi Liquid Theory                                                | 15        |
| 1.5 Tight Binding, Anderson and Hubbard Models                         | 18        |
| <b>2. Dielectric Function</b>                                          | <b>21</b> |
| 2.1 RPA Dielectric Function                                            | 21        |
| 2.2 Beyond the RPA                                                     | 27        |
| 2.2.1 Monte Carlo Calculations                                         | 27        |
| 2.2.2 Hubbard's Attempt                                                | 29        |
| 2.2.3 Phenomenological Consideration of $\epsilon(\mathbf{q}, \omega)$ | 30        |
| 2.2.4 Self-Consistent Approach                                         | 31        |
| 2.2.5 Excess Energy                                                    | 35        |
| 2.3 Plasmon Dispersion                                                 | 36        |
| <b>3. One-Component Plasmas at High Temperatures</b>                   | <b>43</b> |
| 3.1 $\epsilon$ and $\Gamma$ Series                                     | 43        |
| 3.2 Quantum Effects at High Temperatures                               | 50        |
| 3.3 Short-Distance Correlations                                        | 54        |
| <b>4. Low Temperature Plasmas</b>                                      | <b>57</b> |
| 4.1 Asymptotic Correlations                                            | 57        |
| 4.1.1 Long-Distance Correlations and the Effect<br>of Impurities       | 57        |
| 4.1.2 Ladder Diagram Contribution                                      | 59        |
| 4.2 Correlation Energy in Three Dimensions                             | 62        |
| 4.2.1 Ideal Gas Contribution                                           | 63        |
| 4.2.2 First-Order Exchange Contribution                                | 64        |
| 4.2.3 Ring Diagram Contribution                                        | 64        |
| 4.2.4 Direct Calculation of the Ring Energy                            | 66        |
| 4.2.5 Second-Order Exchange Contribution                               | 67        |
| 4.2.6 Correlation Energy                                               | 68        |
| 4.3 Correlation Energy of 2D Electrons                                 | 69        |

|                                                              |            |
|--------------------------------------------------------------|------------|
| <b>5. Electron-Hole Liquids</b>                              | <b>73</b>  |
| 5.1 Excitons                                                 | 73         |
| 5.2 Phase Diagram                                            | 80         |
| 5.3 2D Electron-Hole Plasma                                  | 84         |
| <b>6. Correlation in a Magnetic Field</b>                    | <b>91</b>  |
| 6.1 Spatial Correlation in a Magnetic Field                  | 91         |
| 6.2 Magnetic Response in Three Dimensions                    | 97         |
| 6.2.1 Exchange Effect at High Temperatures                   | 97         |
| 6.2.2 Ideal Electron Gas at Low Temperatures                 | 99         |
| 6.2.3 Exchange Effects at Low Temperatures                   | 100        |
| 6.2.4 Correlation Effects                                    | 102        |
| 6.2.5 Local Field Correction                                 | 108        |
| 6.3 Effective $g$ -Factor in Si Inversion Layers             | 109        |
| 6.4 Coulomb Effects on 2D de Haas-van Alphen Oscillations    | 114        |
| 6.4.1 Chemical Potential                                     | 114        |
| 6.4.2 Exchange Effect                                        | 116        |
| 6.4.3 Correlation Contribution                               | 118        |
| 6.4.4 de Haas-van Alphen Oscillations                        | 119        |
| 6.5 Field Induced SDW States of 1D Conductors                | 123        |
| <b>7. Electronic Specific Heat</b>                           | <b>129</b> |
| 7.1 Correlation Effects                                      | 129        |
| 7.1.1 Lidiard Approximation                                  | 129        |
| 7.1.2 Exchange and Correlation Effects                       | 131        |
| 7.1.3 Specific Heat of 2D Electrons                          | 135        |
| 7.2 Magnetothermal Effect in Two Dimensions                  | 137        |
| 7.3 Heavy Fermions                                           | 142        |
| <b>8. Magnetoconductivity in Two Dimensions</b>              | <b>151</b> |
| 8.1 Magnetoconductivity of 2D Electrons                      | 151        |
| 8.2 Memory Function Formalism                                | 159        |
| 8.3 Anomalous Cyclotron Resonance                            | 163        |
| <b>9. Localization</b>                                       | <b>171</b> |
| 9.1 Anderson Localization and Scaling                        | 171        |
| 9.2 Weak Localization                                        | 176        |
| 9.2.1 Interference Effect                                    | 176        |
| 9.2.2 Magnetic Field Effects                                 | 180        |
| 9.3 Interaction Effect                                       | 185        |
| <b>10. Hopping, Percolation and Conductance Fluctuations</b> | <b>193</b> |
| 10.1 Hopping and Percolation                                 | 193        |
| 10.2 Universal Conductance Fluctuations in 1D Systems        | 203        |
| 10.3 Conductance of TTF/TCNQ                                 | 210        |

|                                                                        |     |
