Introduction 1

Theoretical Foundation 7

1 Hamiltonian Operator and Eigenvalue Equations 9

 1.1 Hamiltonian operator 9

 1.1.1 Extended Breit Hamiltonian operator 9

 1.1.2 Generalized Hamiltonian operator 12

 1.2 Eigenvalue equations 16

Basic Theoretical Formulation 19

2 Angular Functions: Coupling of Angular Momenta 21

 2.1 One-electron functions 21

 2.2 SL-functions 24

 2.3 JM_J - and FM_F -functions 28

 2.4 Selection of functions 32

3 Tensor-Operator Formulation 35

 3.1 Tensor operators 35

 3.2 Wigner-Eckart theorem 36

 3.3 Reduced matrix elements 37

 3.4 Matrix elements 42

Application of the Basic Formulation 45

4	Transformation of Operators to Tensor Form	47
4.1	Basic operators	47
4.1.1	Operators $s^{(1)}$, $\mathbf{L}^{(1)}$ and $C^{(k)}$	47
4.1.2	Other common operators	53
4.2	Transformation rules	54
4.3	Application	62
4.4	Summary	62
5	Matrix Elements	69
5.1	General formulation	69
5.2	General expressions	71
5.2.1	SM_SLM_L -coupling	71
5.2.2	JM_J -coupling	72
5.2.3	FM_F -coupling	74
5.3	Examples for specific interactions	75
6	Summary of Theoretical Results	79
6.1	Electronic energy	81
6.2	Mass variation	82
6.3	Specific mass effect	83
6.4	One-electron Darwin correction	84
6.5	Two-electron Darwin correction	85
6.6	Electron spin-spin contact interaction	86
6.7	Orbit-orbit interaction	87
6.8	Spin-orbit coupling	89
6.9	Spin-spin dipole interaction	92
6.10	Magnetic dipole and Fermi contact interactions	93
6.11	Electric quadrupole coupling	95
6.12	Magnetic octupole coupling	96
6.13	Zeeman effect (low field)	97
6.14	Zeeman effect (high field)	103
6.15	Zeeman effect (very high field)	104
6.16	Stark effect	104
6.17	Nuclear-mass dependent orbit-orbit interaction	106
6.18	Nuclear-mass dependent spin-orbit coupling (electron spin)	107
6.19	Nuclear-mass dependent spin-orbit coupling (nuclear spin)	108
	Implementation	111

7	Practical Details.....	113
7.1	Selection of configurations.....	114
7.2	Determination of radial functions.....	114
7.3	Selection rules.....	115
7.4	Mass corrections.....	119
8	Numerical Examples.....	121
8.1	Accurate energies.....	121
8.2	SLJ energy levels.....	122
8.3	Hyperfine-structure splittings.....	126
8.4	Nuclear-mass dependent corrections.....	129
	Bibliography.....	131
	References.....	131
	Reference texts.....	134
	Data sources.....	135
	Units and Constants.....	137
	Constants.....	137
	Units.....	138
	Notation and Symbols.....	139
