Section I Basic Anatomy, Physiology and Biomechanics

1.	Physiology and Pathophysiology of Tissues and Healing	
1.1	Connective Tissue	1
1.1.1	Composition of the connective tissue	1
1.1.2	Dense and loose connective tissue	1
	Macroscopic level	1
	Microscopic level	1
1.1.3	Cells	2
1.1.4	Layer and compartment models	3
1.1.5	Function	3
1.1.6	Dysfunction	3
1.1.7	Healing process	4
1.2	Wound Healing	4
1.2.1	Phases of wound healing	4
	1. Inflammatory phase	4
	2. Debridement phase	4
	3. Repair phase	5
	4. Maturation phase	5
1.2.2	Wound classification	6
1.2.3	Wound closure	6
	Primary closure	6
	Healing by second intention	6
	Delayed primary closure (third intention healing)	7
	Delayed secondary closure	7
1.2.4	Methods for wound closure	7
1.2.5	Factors which may inhibit healing	8
1.2.6	Management of wound healing	8
	Control of exuberant granulation tissue	8
	Hydrosurgical lavage	8
	Wound dressings and external support	9
	bandaging, splinting & casting – indications & techniques	9
	Antimicrobial treatment of wounds	9
	Anti-inflammatory drugs	10
1.2.7	Skin grafting	10
1.3	Bones	11
1.3.1	Function of bone	11
1.3.2	Bone structure and components	11
	Macroscopic features of bone ^[2]	11
	Microscopic features of bone	12
	Blood supply of bone	12
	Nerve supply of bone	12
1.3.3	Physiology of bone	12
1.3.4	Pathophysiology of bone injury	13
1.3.5	Bone response to immobilization	13
1.3.6	Bone healing	14
1.4	Muscles	14
1.4.1	Overview	14
1.4.2	Muscle structure and function	14
	Morphology	14
	Muscle physiology	17
	Energy provision for muscular functions	19
1.4.3	Muscle fiber types	20
	Recognition and properties	20
	Muscle fiber type recruitment	21

	Muscle fiber composition	21
	Significance to performance	21
	Control and regulation	21
1.4.4	Muscle injuries	22
	Muscle response to trauma and disease	22
	Muscular causes of poor performance	23
1.5	Tendons and Ligaments	24
1.5.1	Introduction	24
1.5.2	Structure of tendons and ligaments	24
	Hierarchical structure	24
	Myotendinous junction and osteotendinous junction	24
	Extracellular matrix of tendon	25
	Cellular composition	25
	Vascular and neural components	26
	Nerve supply	27
1.5.3	Functional characteristics of tendons	27
	Mechanical properties of functionally distinct tendons	27
	Micromechanical properties of functionally distinct tendons	27
	Fascicular specialisations	27
	Interfascicular matrix (IFM) specialisations	27
	Fibrillar specialisations	28
1.5.4	Tendon physiology	28
	Development of functionally distinct tendons	28
	Ageing of functionally distinct tendons	28
	Ageing effects on whole tendon	28
	Ageing effects on tendon subunits	29
	Ageing effects on tendon cells	29
	Influence of loading/exercise	29
1.5.5	Pathophysiology	30
	Types of tendon injury	30
	Terminology for tendon injury	30
	Subcutaneous injury	30
	Percutaneous injury	30
	Healing mechanisms	30
	Phases of healing	31
	Consequences of injury	32
1.5.6	Prevention strategies	32
1.6	Joints	32
1.6.1	Joint development and classification	32
	Embryonic joint development	32
	Classification of joints	32
1.6.2	Joint structure	33
	Articular cartilage	33
	Subchondral bone	33
	Joint capsule	33
	Synovial fluid	33
	Other joint components	33
1.6.3	Physiology of joints	34
	Tissue homeostasis	34
	Joint lubrication	34
	Joint biomechanics	34
	Pain perception	35
1.6.4	Joint pathophysiology and response to tissue injury	35
	Joint response to injury	35
	Joint response to immobilization	35
	Commonly recognized conditions of the equine joint	35
	Clinical manifestations of joint disease	36
	Imaging diagnostics	36

3.3.4	Functional aspects of the cervical region.....	96
	Cervical vertebral structures	97
3.3.5	Cervical vertebrae.....	97
3.3.6	Cervical articulations.....	98
3.3.7	Nuchal ligament	98
3.3.8	Cervical musculature.....	98
	Topographic-based muscle function.....	98
	Morphologic-based muscle function	100
3.3.9	Cervical biomechanics.....	101
	Cervical kinematics	101
	Cervical kinematics during locomotion	101
	Biomechanical effects of ridden exercise on the cervical region.....	101
3.4	Thoracolumbar Region.....	102
3.4.1	Introduction.....	102
3.4.2	Clinical relevance to sports medicine and rehabilitation	102
3.4.3	Regional and topographic anatomy.....	102
	Osseous landmarks of the thoracolumbar region ..	102
	Soft tissues of the thoracolumbar region.....	102
3.4.4	Functional aspects of the thoracolumbar region	103
3.4.5	Thoracolumbar vertebrae	105
	Spinous processes.....	106
	Transverse processes	107
3.4.6	Thoracolumbar articulations	107
	Articular process joints.....	107
	Intervertebral disk	107
	Costal articulations.....	107
	Intertransverse joints	107
3.4.7	Spinal ligaments.....	107
3.4.8	Thoracolumbar musculature	107
	Topographic-based trunk muscle functions	108
	Morphologic-based epaxial muscle functions	108
3.4.9	Thoracolumbar vertebral biomechanics	108
	Functional thoracolumbar regions	109
	Effect of different gaits on thoracolumbar kinematics.....	109
3.5	Sacropelvic Region.....	109
3.5.1	Introduction.....	109
3.5.2	Clinical relevance to sports medicine and rehabilitation	109
3.5.3	Regional and topographic anatomy.....	109
	Osseous landmarks of the sacropelvic region.....	109
	Soft tissues of the sacropelvic region	110
3.5.4	Functional aspects of the sacropelvic region	110
3.5.5	Pelvis.....	110
3.5.6	Sacrum.....	111
3.5.7	Caudal vertebrae (tail)	111
3.5.8	Sacroiliac articulation.....	111
3.5.9	Sacroiliac and pelvic ligaments.....	112
	Sacroiliac ligaments.....	112
	Sacrosciatic ligament	112
3.5.10	Sacropelvic musculature	112
	Topographic-based muscle function.....	113
	Morphologic-based muscle function	113
	Articular-based muscle function	113
3.5.11	Sacropelvic biomechanics	114
	Pelvic deformation (in vitro)	114
	Induced sacroiliac joint movements (in vitro)	114
	Sacropelvic kinematics during locomotion	114
3.6	References.....	115

4. Anatomical Survey of the Musculoskeletal System

4.1	Skeleton.....	117
4.1.1	Thoracic limb.....	117
4.1.2	Pelvic limb	118
4.1.3	Equine skeleton.....	118
4.2	Extrinsic Muscles of Thoracic Limb.....	119
4.3	Muscles of the Thoracic Limb.....	124
4.4	Muscles of the Pelvic Limb.....	144
4.5	Muscles of the Vertebral Column.....	167

5. Myofascial Kinetic Lines

5.1	Introduction.....	177
5.2	Line Function.....	178
5.3	Line Anatomy.....	178
	Superficial Dorsal Line.....	178
	Superficial Ventral Line.....	178
	Deep Dorsal Line	179
	Deep Ventral Line	180
	Lateral Line.....	181
	Functional Line	181
	Spiral Line.....	183
	Front Limb Lines.....	183
5.4	Clinical Implications.....	183
	Superficial Dorsal Line.....	183
	Superficial Ventral Line.....	183
	Deep Dorsal Line	183
	Deep Ventral Line	183
	Lateral Line.....	184
	Functional Line	184
	Spiral Line.....	184
	Front Limb Lines.....	184
	Front Limb Retraction Line	184
	Front Limb Protraction Line	184
5.5	Treating the Lines in Horses.....	184
5.6	References.....	185

6. Locomotion

6.1	Gaits.....	187
6.1.1	Walk	187
6.1.2	Trot.....	187
6.1.3	Lateral movements	188
	Leg yield	188
	Shoulder-in	188
	Travers.....	189
	Renvers.....	189
	Half pass.....	189
6.1.4	Modifications of trot-type gaits.....	189
	Piaffe and passage.....	189
	Pace.....	190
	Tölt	190
6.1.5	Canter	190
	Counter-canter.....	190
	Lope.....	190
	Canter pirouette.....	190
	Roll-back turn	190
	Flying changes or canter changes.....	190
6.1.6	Gallop.....	190
	Sliding stop.....	190

6.1.7	Working, medium, collected and extended gaits	190
	On the bit.....	190
	Collection	190
	Extension	191
	Transitions	191
	Circles versus straight lines.....	191
6.2	Lameness	191
6.2.1	What is lameness?	191
6.2.2	Classification of lameness:.....	191
6.2.3	How to assess gait.....	191
	Assessment in hand.....	191
	Assessment moving in circles.....	191
6.2.4	Grading lameness	192
	Why grade lameness?	192
	How accurate is lameness grading?.....	192
	Which lameness scale to use?	192
6.2.5	Basic characteristics of lameness.....	193
	Unilateral forelimb lameness	193
	Bilateral forelimb lameness.....	193
	Unilateral hindlimb lameness.....	194
	Bilateral hindlimb lameness	195
	Ipsilateral forelimb lameness and hindlimb lameness	195
	Contralateral forelimb and hindlimb lameness.....	195
6.2.6	Adaptation strategies to lameness	195
6.2.7	Other alterations of gait: Limb placement and stability; hyperflexion, abduction	196
6.2.8	Differentiation between lameness and neurological gait abnormalities	196
6.2.9	Lameness examination overview	196
	Posture	196
	Muscle development, symmetry and tone	197
	Inspection, palpation	197
	Flexion tests	197
	Assessment on the lunge (or in circles in hand) on soft and firm surfaces	197
	Ridden exercise	197
	Effect of footing on lameness	198
6.2.10	Diagnostic anaesthesia.....	198
6.2.11	The whole picture.....	198
6.3	Gait Analysis Systems.....	198
6.3.1	Introduction: A bit of history	198
6.3.2	The need for quantitative gait analysis	199
	The limitations of visual gait assessment:.....	199
6.3.3	Measuring techniques for objective gait assessment	199
	Kinetics.....	199
	Kinematics	200
	Electromyography	201
6.3.4	Clinical applications	202
	Using upper body movement symmetry to quantify lameness	202
	Lungeing sound horses.....	203
	Lungeing of lame horses.....	203
	Diagnostic analgesia	203
	Compensatory lameness (withers).....	204
	Lameness exam under the saddle.....	204
6.3.5	Currently available and validated systems for quantitative lameness assessment based on upper-body movement symmetry	205
6.4	References.....	209
6.4.1	Section Lameness (6.2)	209
6.4.2	Section Gait Analysis Systems (6.3)	209

7. Conformation

7.1	What is Conformation?	213
7.2	Conformation, Posture or Position?	213
7.3	Assessment of Conformation	214
7.3.1	Practical tips for clinical assessment of conformation	214
	The plumb line method	214
7.4	Conformation and Genetics	215
7.4.1	Conformation is breeding selection	215
7.4.2	Muscle mass and myostatin gene regulation	215
7.4.3	Heritability of performance traits	215
7.4.4	Conformation and back function – recent findings in Icelandic horses	215
7.4.5	A mutation that governs gait through neural networks.....	215
7.5	How Does Conformation Affect Performance and Orthopedic Disease?.....	216
7.5.1	Conformation and performance	216
7.5.2	Conformation and lameness.....	216
	Body size, head, neck and movement.....	216
	Limb conformation.....	216
	The hock	217
7.5.3	Severe conformational disease – “skeletal atavism” in Shetland Ponies.....	217
7.6	References.....	218

8. Exercise Physiology

8.1	Muscle Physiology and Energy Production	221
8.1.1	Muscular response to exercise.....	221
	Aerobic exercise	221
	Anaerobic exercise	221
8.1.2	Muscular response to training.....	222
	Overview	222
	Some preliminary concepts and principles	222
	Muscular adaptations to training	223
	Implications of muscle response to exercise	224
	Designing training programs.....	224
	Ergogenic aids, overtraining and detraining.....	226
8.2	The Respiratory System.....	226
8.2.1	Basic concepts	226
8.2.2	The structure and function of equine airways	227
	Anatomy of the respiratory tree.....	227
	Mechanics of breathing	227
8.2.3	Response of the respiratory system to exercise .	228
	Adaptation of ventilation to exercise.....	228
	Work of breathing during exercise	228
8.2.4	Response of the respiratory system to training .	228
8.3	The Cardiovascular System	229
8.3.1	The structure and function of equine cardiovascular system	229
	The heart and the box heart model.....	229
	Heart size	229
	The spleen’s role in cardiovascular function	230
	The systemic and pulmonary circulation.....	230
8.3.2	Control of cardiac function: the autonomic system	230

8.3.3 Electrophysiology of the equine athlete's heart 230
Electrical conduction pathway 230
Waveform components 230
Analyzing the ECG..... 231
Exercising ECG..... 231

8.4 Thermoregulation..... 231

8.4.1 Basic concepts 231

8.4.2 Factors that determine a horse's ability to thermoregulate..... 231

8.4.3 Control of body temperature 232

8.4.4 Thermoregulation during exercise 232
Thermoregulation during exercise – cold..... 232
Thermoregulation during exercise – heat..... 232

8.4.5 Assessing thermal environmental conditions..... 232

8.4.6 Climate mitigation – heat 234

8.4.7 Assessing hyperthermia 235
Signs of heat exhaustion..... 235
Signs of heat stroke..... 236
Anhidrosis..... 236

8.4.8 Managing exercise-induced hyperthermia – cooling 236

8.5 References..... 237

8.5.1 Section Muscle Physiology and Energy Production (8.1) 237

8.5.2 Section The Respiratory System (8.2)..... 238

8.5.3 Section The Cardiovascular System (8.3) 238

8.5.4 Section Thermoregulation (8.4)..... 239

Section II
Pain - Pathophysiology and Management

9. Pain – Pathophysiology and Assessment

9.1 Introduction and Definitions..... 241

9.2 Classification of Pain..... 241

9.2.1 Duration..... 241

9.2.2 Localization 241

9.2.3 Inciting cause 241

9.2.4 Intensity..... 241

9.3 Pain Pathophysiology..... 241

9.4 Pain Assessment..... 243

9.5 References..... 246

10. Pain – Management

10.1 Multimodal Pain Management..... 247

10.2 Pharmacological Management of Pain and Inflammation 247

10.2.1 General pharmacological management of pain and inflammation 247
Non-steroidal anti-inflammatory drugs (NSAIDs) ... 247
Steroidal anti-inflammatory drugs (corticosteroids) 247
Opioids 247
Alpha-2 (α-2) adrenoreceptor agonists 248
Local anesthetics..... 248
Anticonvulsants 248
Anti-depressants..... 248
Muscle relaxants..... 248
Bisphosphonates 248

Phytotherapeutics..... 248
Epoxide hydrolase inhibitor..... 248

10.2.2 Pharmacological management of joint disease... 249
Systemic medication..... 249
Intra-articular medication 250

10.3 Nonpharmacological Management of Pain and Inflammation 251

10.4 References..... 252

10.4.1 Sections Multimodal Pain Management (10.1), General Pharmacological Management of Pain and Inflammation (10.2.1) 252

10.4.2 Section Pharmacological Management of Joint Disease (10.2.2) 253

10.4.3 Section Nonpharmacological Management of Pain and Inflammation (10.3) 254

Section III
Patient Assessment

11. Patient Examination in the Context of Rehabilitation

11.1 Basics 255

11.2 Medical History 255

11.3 Physical Examination 255

11.4 Body Condition Scoring 255
Body condition scale/score..... 255

11.5 Cardiovascular Evaluation 258

11.5.1 Introduction..... 258

11.5.2 Blood pressure 258
Technological advancements in cardiovascular assessment..... 258

11.5.3 Cardiovascular parameters and PWA evaluation 258
Evaluating blood pressure and pulse wave analysis 259

11.5.4 Systemic vascular resistance (SVR) – endothelial function 259

11.6 Functional Assessment..... 261

11.6.1 Functional diagnosis 261

11.6.2 Observation 261
Static observation..... 261
Dynamic observation 261

11.6.3 Palpation..... 262
Soft tissue palpation 262
Palpation of bony structures..... 262

11.6.4 Movement tests/ROM evaluation 263
Palpation of passive physiological ROM of limbs and limb joints 263
Limb ROM related to function 263
Baited stretches and reflex responses to palpatory pressure 263

11.6.5 Functional muscle assessment 264

11.6.6 Simplifying functional assessment 264
Example 1 264
Example 2 264

11.7 Orthopedic Examination 265

11.7.1 Basics 265

11.7.2 Conditions for conducting an orthopedic examination 265

11.7.3 Static examination 265

11.7.4	Hands on examination	265	12.2.3	Principles of image acquisition	283
	Examination of the forelimb:	265	12.2.4	Principles of interpretation.....	284
	Examination of the hindlimb	266	12.2.5	Clinical application and use in rehabilitation.....	284
	Examination of the neck	266	12.2.6	Limitations.....	285
	Examination of the back	267	12.3	Nuclear Scintigraphy.....	285
	Examination of the pelvis.....	267	12.3.1	Basic principles of nuclear scintigraphy	285
11.7.5	Dynamic examination	268			285
11.8	Neurologic Examination.....	268	12.3.2	Principles of interpretation.....	285
11.8.1	Deficit types	268	12.3.3	Clinical application and use in rehabilitation.....	285
	Most common.....	268	12.3.4	Limitations.....	286
	Uncommon	268	12.4	Magnetic Resonance Imaging (MRI).....	287
11.8.2	Grades of neurologic deficits	268	12.4.1	Basic principles of MRI	287
11.8.3	Recognizing neurologic gait deficits	268	12.4.2	Principles of interpretation.....	287
	Ataxia – subtle signs.....	268	12.4.3	Clinical application and use in rehabilitation.....	287
	Ataxia – obvious signs	268	12.4.4	Limitations.....	288
	Paresis (weakness) – subtle signs	268	12.5	Computed Tomography (CT).....	289
	Paresis (weakness) – obvious signs	268	12.5.1	Basic principles of CT.....	289
	Hypermetria	268	12.5.2	Principles of interpretation.....	289
	Spasticity	268	12.5.3	Clinical application and use in rehabilitation.....	289
11.8.4	Gait analysis for the neurological exam (including special tests).....	268	12.5.4	Limitations.....	291
	Standard tests	268	12.5.5	CT vs MRI – which modality to choose?.....	291
	Special tests	268	12.6	Ultrasound Tissue Characterization	292
11.8.5	Upper motor neuron (UMN) versus lower motor neuron (LMN) deficits	270	12.6.1	Ultrasound tissue characterization (UTC) vs. standard ultrasonography	292
11.8.6	Localization of the lesion	270	12.6.2	Basic principles of ultrasound tissue characterization (UTC)	292
11.9	Follow-Up Examinations	271	12.6.3	Principles of image acquisition	292
11.9.1	Initial Assessment.....	271	12.6.4	Principles of interpretation.....	293
11.9.2	Follow-up (repeat of initial assessment).....	271	12.6.5	Clinical application and use in rehabilitation.....	294
11.10	Objective Outcome Measures	272		Rehabilitation.....	294
11.10.1	Basics	272		Injury prediction	295
	Why use objective outcome measures?	272	12.6.6	Limitations.....	295
	What is an objective outcome measure?	272	12.7	Elastography	295
11.10.2	Outcome measures.....	272	12.7.1	Basic principles of elastography	295
	Pain.....	272	12.7.2	Principles of image acquisition	295
	Swelling	274	12.7.3	Principles of interpretation.....	296
	Joint range of motion	275	12.7.4	Clinical application and use in rehabilitation.....	296
	Muscle function	277	12.7.5	Limitations.....	296
	Tape measure	277	12.8	Thermography	296
	Physical activity	278	12.8.1	Basic principles	296
	Posture and conformation	278		Basics	296
11.10.3	Take home message.....	278		Advantages	296
11.11	References.....	279		Sensitivity.....	297
11.11.1	Sections Basics, Medical History, Physical History, Physical Examination, Body Condition Scoring (11.1-4)	279		Emissivity.....	297
11.11.2	Section Cardiovascular Evaluation (11.5)	279		Influence of hair and coat	297
11.11.3	Sections Functional Assessment, Orthopedic Examination, Neurologic Examination (11.6-9) ...	279		Color palettes	298
11.11.4	Section Objective Outcome Measures (11.10)....	279		Equipment	298
12.	Diagnostic Imaging		12.8.2	Patient assessment.....	299
12.1	Radiography.....	281	12.8.3	Principles of image acquisition	299
12.1.1	Radiographic views – comprehensive examination.....	281		Exam area.....	299
12.1.2	Principles of interpretation.....	282		Patient preparation	299
12.1.3	Clinical application and use in rehabilitation.....	282		Thermographic examination protocol	300
12.1.4	Limitations.....	282		Video thermography	301
12.2	Diagnostic Ultrasonography.....	283	12.8.4	Principles of interpretation.....	301
12.2.1	Basic principles of ultrasonography.....	283		Hot spots	302
12.2.2	Instrumentation	283		Cold spots.....	302
			12.8.5	Clinical applications and use in rehabilitation.....	303
			12.8.6	Limitations.....	307
			12.9	References	307

12.9.1	Sections Radiography (12.1), Diagnostic Ultrasonography (12.2), Nuclear Scintigraphy (12.3), Magnetic Resonance Imaging (MRI) (12.4), Computed Tomography (12.5).....	307
12.9.2	Sections Ultrasound Tissue Characterization (12.6), Elastography (12.7).....	307
12.9.3	Section Thermography (12.8).....	308

13. Poor Performance

13.1	Musculoskeletal Causes of Poor Performance ...	309
13.1.1	Primary lameness (may only be apparent under specific conditions)	309
13.1.2	Primary thoracolumbosacral pain	309
13.1.3	Primary cervicothoracic pain	309
13.1.4	Tack-related pain	309
13.1.5	Problems associated with the rider	310
13.1.6	Reasons why horse may be presented for poor performance.....	310
13.1.7	History	311
13.1.8	Clinical assessment	311
13.1.9	The ridden horse pain ethogram	315
13.1.10	Communication with the rider.....	316
13.1.11	When it may be necessary to change the rider ...	316
13.1.12	“Diagnostic” use of systemic analgesic medication – uses and limitations	316
13.1.13	So-called “diagnostic medication”	317

15.4.5 Noseband.....	360
15.4.6 Cavesson noseband	361
15.4.7 Flash noseband	361
15.4.8 Crank noseband	362
15.4.9 Drop noseband	362
15.4.10 Grackle noseband	362
15.5 References.....	363

16. Rider and Horse Interaction

16.1 Introduction.....	365
16.2 Rider Posture.....	365
16.3 The Rider.....	365
16.3.1 The rider's pelvis	365
Male vs. female pelvis.....	365
16.3.2 The rider's trunk.....	366
The rider, saddle, horse relationship	366
16.4 Rider Kinematics in Relation to the Horse's Back Motion.....	366
16.4.1 General characteristics of skilled riders	366
16.4.2 Walk	366
Characteristics of walk	366
16.4.3 Trot.....	366
Characteristics of trot.....	366
Rider seating styles at trot.....	366
Sitting and rising trot	367
Rising trot	367
Two-point trot	367
16.4.4 Canter	367
Characteristics of the canter	367
Rider kinematics at sitting canter	368
Two-point canter	368
16.4.5 The gallop	368
Jockey seat	368
16.5 How the Rider Affects the Horse.....	368
16.5.1 Influence of the rider's aids.....	368
16.5.2 Influence of the rider's weight.....	368
How much weight can a horse carry.....	368
16.6 Rider-Saddle Interaction	369
16.6.1 How the rider is affected by the upper side of the saddle	371
16.6.2 Stirrup length and stirrups	371
16.7 Lateral Balance and Position	372
16.7.1 Asymmetry due to the horse	372
16.7.2 Asymmetry due to the saddle	372
16.7.3 Asymmetry due to the rider.....	372
16.7.4 How saddle slip affects the rider	372
16.7.5 Distinguishing the cause of saddle slip	373
16.7.6 Rider effects on asymmetry associated with turns and circles	373
16.7.7 Rider effects on lameness	374
16.8 Off-Horse Training	374
16.9 References.....	374

17. Asymmetry and Laterality in the Horse

17.1 Introduction.....	377
17.1.1 Definitions and basic concepts	377
Asymmetry	377
Laterality.....	378
Causes and development of asymmetry and laterality	378
17.2 Manifestations.....	379
Correlation with breed, sex and age	379
17.2.1 Morphological.....	379
Feet	379
Other morphological asymmetries	379
17.2.2 Motor	380

17.2.3	Weight bearing distribution	381
17.2.4	Sensory.....	381
	Visual.....	382

24. Myofascial Treatments

24.1	Basics	465
24.2	Biological Effects.....	466
24.3	Indications	466
24.4	Contraindications and Precautions	466
24.5	Techniques and Clinical Application.....	467
24.5.1	Animal fascial manipulation	467
	Treatment protocol	468
24.6	References.....	470

25. Passive Range of Motion and Stretching Exercises

25.1	Basics	473
25.1.1	Definitions	473
	ROM exercises	473
	Passive joint ROM	473
	Passive muscle ROM	473
	Passive stretching	473
25.1.2	Types of stretching techniques	474
	Passive stretching	474
	Sustained stretching	474
	Eccentric training (loading)	474
	Dynamic stretching	475
	Active stretching	475
	Active-assisted stretching	475
	Induced spinal reflexes	475
25.2	Biological Effects	475
25.2.1	Passive ROM exercises	475
25.2.2	Stretching	475
25.3	Indications	475
25.4	Contraindications and Precautions	476
25.5	Clinical Applications	476
25.5.1	Clinical application of passive ROM exercises	476
	Progression	477
25.5.2	Clinical application of passive stretching	477
	Progression	478
25.6	References	478

26. Joint Mobilization

26.1	Basics	479
26.1.1	Definition	479
26.1.2	Basic principles	479
26.1.3	Types of joint mobilization	479
26.1.4	The concave-convex rule	480
26.1.5	Grades of joint mobilization	480
26.1.6	Joint end feel	480
26.2	Biological Effects	481
26.3	Mobilization in Assessment	481
26.3.1	Mobilization for assessment	481
26.3.2	Reassessment	481
26.4	Mobilization as Treatment	481
26.4.1	Direction	482
26.4.2	Selection of grade	482
26.4.3	Dosage	482
26.4.4	Progression	482
26.4.5	Integration	482
	General tips for mobilization	482
26.5	Indications	482
26.6	Contraindications and Precautions	483
26.7	Clinical Applications	483
26.8	References	484

27. Chiropractic

27.1	Basics	487
27.1.1	Definitions	487

27.2	Biological Effects	488
27.2.1	Biomechanical effects	488
27.2.2	Mechanoreceptor effects	488
27.2.3	Nociceptive effects	488
27.3	Indications	489
27.4	Contraindications and Precautions	489
27.4.1	Complications or adverse effects	489
27.5	Chiropractic Techniques	489
27.6	Clinical Application	490
27.6.1	Vertebral segment mobilization	490
27.6.2	Dosage	491
27.6.3	Post-treatment management	491
27.6.4	Adjunct recommendations and prognosis	492
27.7	Summary	492
27.8	References	492

28. Osteopathy

28.1	Basics	493
28.1.1	Definitions	493
28.1.2	History	493
28.1.3	Principles of osteopathy	493
28.1.4	Physiological basis of osteopathy	493
28.2	Biological Effects	493
28.3	Indications	495
28.4	Contraindications and Precautions	495
28.5	Treatment Techniques and Clinical Application	495
28.5.1	Soft tissue techniques: cross fibre and longitudinal stretch	495
	Overview	495
	Technique	495
	Application	495
28.5.2	Inhibitory techniques	496
	Overview	496
	Technique	496
	Application	496
28.5.3	Articulation techniques	497
	Overview	497
	Technique	497
	Application	497
28.5.4	Myofascial Release techniques	498
	Overview	498
	Technique	498
	Application	498
28.5.5	Indirect techniques (functional technique, sustained positional release)	499
	Overview	499
	Technique	499
	Application	499
28.5.6	High velocity thrust (HVT) or high velocity low amplitude (HVLA) thrust	499
	Overview	499
	Technique	500
	Application	500
28.5.7	Craniosacral techniques	500
	Overview	500
	Technique	501
	Application	501

Therapeutic Exercises

29. Active Therapeutic Exercises

29.1 Basics 505

29.2 Biological Effects..... 505

29.3 Indications..... 505

29.4 Contraindications and Precautions 505

29.5 Types of Active Therapeutic Exercises and Clinical Application 505

29.5.1 Core exercises..... 505

29.5.2 Dynamic mobilization exercises (baited stretches)..... 506

 Clinical application..... 507

29.5.3 Core strengthening exercises..... 507

 Clinical application..... 507

29.5.4 Balancing exercises 508

 Clinical application..... 509

29.6 Exercises During Locomotion..... 510

29.6.1 Effects of different gaits and speeds 510

 Walk mechanics..... 510

 Trot mechanics 510

 Canter and gallop mechanics..... 510

 Transitions 510

 Clinical application..... 510

29.6.2 Lungeing 511

 Clinical application..... 511

29.6.3 Gradients 511

 Clinical application..... 511

29.6.4 Jumping..... 512

29.6.5 Pole work..... 512

 Clinical application..... 512

29.6.6 Rider..... 512

 Clinical application..... 513

29.7 Conclusion..... 513

29.8 References..... 513

30. Proprioceptive Exercises

30.1 Basics 515

30.1.1 Introduction..... 515

30.1.2 Pathophysiology 515

30.2 Biological Effects..... 515

30.3 Indications..... 515

30.4 Contraindications and Precautions 515

30.5 Types of Proprioceptive Training and Clinical Application..... 516

30.5.1 Proprioceptive balance pads 516

 Clinical application..... 517

30.5.2 Tactile stimulation..... 517

 Clinical application..... 518

Section VIII Electrophysical Treatment Modalities

36. Laser Therapy

36.1	Basics	561
36.1.1	Introduction.....	561
36.1.2	Laser classification	561
36.1.3	Propagation of laser radiation through tissues ...	562
	Light absorption.....	563
36.1.4	General information about laser emission and treatment parameters.....	564
	Pulsed vs. continuous laser	564
	Treatment parameter considerations.....	564
36.2	Biological Effects.....	565
36.2.1	Interactions between laser radiation and tissue	565
	Photochemical interactions	565
	Photothermal interaction	566
	Photomechanical interaction	566
	Summarizing.....	566
36.2.2	Therapeutic effects	566
	Anti-inflammatory effect	566
	Anti-edema effect	567
	Analgesic effect	567
	Stimulation of tissue repair.....	567
36.3	Indications.....	568
36.4	Contraindications and Precautions	568
36.5	Clinical Application	569
36.5.1	Patient preparation	569
36.5.2	Method of application	569
	On-contact vs. off-contact	569
	Point-to-point vs. scanning technique.....	569
36.5.3	Suggested treatment protocols.....	570
	General therapeutic dosage.....	570
	Calculation of dosage for therapy	571
	Frequency of treatment	571
	Multimodal approach.....	571
	Regulations.....	572
36.6	References.....	573

37. Therapeutic Ultrasound

37.1	Introduction.....	575
37.2	Basics	575
37.2.1	Definitions	575
37.3	Types of Ultrasound	576
37.3.1	Low intensity pulsed US	576
37.3.2	Low frequency US.....	576
37.4	Biological Effects.....	577
37.4.1	Mechanical effects of ultrasound.....	577
37.5	Indications.....	578
37.5.1	Soft tissue healing.....	578
37.6	Contraindications and Precautions.....	578

37.7	Clinical Application	578
37.7.1	Coupling media	578
37.7.2	Patient preparation	578
37.7.3	Methods of application	578
37.7.4	Treatment parameters	578
37.7.5	Treatment considerations.....	579
37.7.6	Sample interventions.....	579
	Tissue case 1	579
	Tissue case 2	579
37.7.7	Application sequence.....	580

38. Extracorporeal Shock Wave Therapy

38.1	Basics	583
38.1.1	History	583
38.1.2	Definitions	583
	Acoustic impedance	583
	Energy flux density.....	583
	Focal size	583
38.1.3	Types of generators.....	585
38.2	Biological Effects.....	586
38.2.1	Effects on bone healing	586
38.2.2	Effects on soft tissue healing	586
38.2.3	Effects on pain modulation.....	587
38.3	Indications	587
38.4	Contraindications and Precautions	587
38.5	Clinical Applications.....	588
38.5.1	Patient preparation	588
38.5.2	Optimizing treatment delivery.....	588
38.5.3	Treatment protocols.....	588
38.5.4	ESWT and biological therapies	589
38.6	References.....	589

39. Electrical Stimulation

39.1	Basics	591
39.1.1	Definition and main therapeutic modalities	591
39.1.2	General parameters	591
	Type of current and polarity	591
	Waveform.....	591
	Frequency.....	591
	Intensity or amplitude.....	591
	Pulse duration or width	591
39.1.3	Chronaxie and rheobase.....	592
39.1.4	Equipment	593
	Units	593
	Electrodes.....	593
39.2	Biological Effects.....	594
39.3	Contraindications and Precautions	594
39.4	Transcutaneous Electrical Stimulation (TENS)	594
39.4.1	General concepts	594
39.4.2	Modalities of TENS and parameters.....	594
	High frequency, low intensity TENS or conventional TENS	594
	Low frequency, high intensity TENS or acupuncture-like TENS	595
	Burst mode TENS.....	595
	Modulated TENS	595
39.4.3	Indications and potential uses	595

39.4.4	Practical application and treatment.....	596
	Skin preparation and electrode placement	596
	Intensity or amplitude.....	596
	Duration and frequency of treatments.....	597

39.5	Neuromuscular Electrical Stimulation (NMES)	597
39.5.1	General concepts	597
39.5.2	Parameters	597
	Types of currents used in NMES	598
	Pulse width or duration.....	598
	Frequency.....	598
	Duty cycle (ON and OFF time) and ramp.....	598
39.5.3	Effects of NMES	598
39.5.4	Indications and potential uses	599
39.5.5	Practical application and treatment.....	599
	Skin preparation and electrode placement	599
	Intensity or amplitude.....	599
	Duration and frequency of treatments.....	600
	Denervated muscles	600
