

Contents

1. Introduction 1

- A. The Hemoglobins in Human Biology and Genetics – An Overview 1
- B. Historical Foundations of Human Hemoglobin Genetics 4
 - 1. Early Genetic Studies of Sickle Cell Anemia and Thalassemia 5
 - 2. Abnormal Hemoglobins as Molecular Diseases 7
 - 3. The Genetic Basis of the Thalassemias 12
 - 4. Discoveries of Additional Globin Genes and Linkage Relationships 13
 - 5. Methodological Advances in Hemoglobin Research 15

2. The Human Hemoglobins 19

- A. Hemoglobin Structure and Function 19
 - 1. The Structure of the Hemoglobin Molecule and Its Subunits 19
 - 2. Hemoglobin Function and Its Control 26
- B. The Normal Human Hemoglobins and Their Globin Subunits 29
 - 1. The Globin Polypeptide Chains 29
 - 2. The Normal Human Hemoglobins 33
 - 3. The Hemoglobins in Gestation and Development 35

3. The Human Globin Genes 37

- A. DNA Structure and Function 37
- B. Recent Methodologic Advances in the Study of Genes and Their Structure 40
- C. Globin Gene Localization and Organization 48
 - 1. The Chromosomal Location of the Globin Genes 48
 - 2. The Linear Arrangement of the Globin Genes in the Chromosomes 50
 - a) The β -Gene Cluster 50
 - b) The α -Gene Cluster 53

- D. The Structure of the Globin Genes 53
 - 1. Globin Gene Organization: Coding and Intervening Sequences 53
 - 2. Flanking Regions of the Globin Genes and Their Role in Gene Transcription 58
 - 3. The DNA Sequences of the Globin Genes 59
 - a) The α -Gene Family 59
 - b) The β -Gene Family 62
- E. The Evolution of the Globin Genes 66

4. *Hemoglobin Synthesis and Globin Gene Expression* 73

- A. Hemoglobin Synthesis and Its Regulation 73
 - 1. Transcription of the Globin Genes 74
 - a) The Composition and Structure of Nuclear Chromatin 74
 - b) Properties of Transcriptionally Active Chromatin 75
 - c) Chromosomal Proteins and Gene Transcription 77
 - d) Regulation of Gene Transcription 78
 - e) Synthesis of the Primary Gene Transcript 79
 - f) Processing of the mRNA Precursor 79
 - i) The Splicing Reaction 80
 - ii) The 5'-terminal Cap 82
 - iii) Polyadenylation of the mRNA Precursor 84
 - g) Structure and Properties of the Human Globin mRNA's 84
 - 2. Globin Translation and Its Regulation 86
 - a) Translation Initiation 89
 - b) Polypeptide Chain Elongation and Termination 90
 - c) Heme Synthesis and Its Regulation 91
 - d) Regulation of Globin Chain Translation and the Role of Heme 93
 - e) Coordination of the Synthesis of the α - and non- α -Globin Chains 95
- B. Regulation of the Expression of the Normal Globin Genes 97
 - 1. The α -Globin Gene Group 97
 - 2. Expression of the β - and δ -Globin Genes 99
 - 3. Gene Switching and Its Regulation 102
 - a) Globin Gene Switching in Embryonic and Fetal Development 102
 - b) γ -Globin Gene Expression in the Older Child and Adult 108
 - c) Elevated Levels of Hb F in Post-Infancy Development 110
 - d) Genetic Factors in Hb F Expression 112

5. *The Globin Gene Mutations – A. Mechanisms and Classification* 115

- A. Mechanisms of Globin Gene Mutation 116
 - 1. Single Base Changes (“Point Mutations”) 116
 - 2. Genetic Recombination 117
 - 3. Nucleotide Deletions and Insertions 121
- B. Classification of the Globin Gene Mutations 124
 - 1. Mutations Associated with Globin Structural Abnormalities 124
 - a) Single Point Mutations which Produce Amino Acid Substitutions 124
 - b) Double Point Mutations 128
 - c) Point Mutations Causing Premature Translation Termination 130
 - d) Point Mutations Producing Extended Globin Chains 131
 - e) Deletion and Insertion Mutants 132
 - f) Frame Shift Mutants 133
 - g) Fusion–Gene Mutants 134
 - h) Complex Globin Gene Mutations 141
 - 2. The Thalassemia Mutations 142
 - a) Gene–Deletion Thalassemia Mutations 143
 - i) α –Globin Gene Deletions 143
 - ii) α –Globin Gene Deletions in Association with α Chain Structural Mutants 145
 - iii) Deletions Involving the β –Globin Gene Complex 146
 - b) The “Non–Deletion” Thalassemia Mutations 149
 - i) Mutations Affecting Globin Gene Transcription 150
 - ii) Base Substitution Involving the Translation Initiation Codon 151
 - iii) Mutations Producing Premature Termination Codons 151
 - iv) Splice Junction Mutations 154
 - v) Mutations Producing Abnormal Splicing Sites 155
 - vi) Polyadenylation/Transcription–Termination Signal Mutations 157
 - 3. Hereditary Persistence of Fetal Hemoglobin (HPFH) Mutations 158
 - 4. Globin Gene Somatic Mutations 160

6. *The Globin Gene Mutations – B. Their Phenotypes and Clinical Expression* 163

- A. Sick Cell Disease 163
 - 1. Pathogenesis 163
 - 2. Hematological and Clinical Features 168
 - 3. The Sick Cell Disease Syndromes 169
 - 4. Heterozygous Hb S (Sick Cell Trait) 172
 - 5. Hb F and Sick Hemoglobin Expression 173
 - 6. Other Genetic Abnormalities that Affect the Expression of Sick Cell Disease 174
- B. Intracellular Hemoglobin Crystallization: Hb C 175
- C. Erythrocytosis: Abnormal Hemoglobins with Increased Oxygen Affinity 175
- D. Congenital Cyanosis 181
 - 1. Abnormal Hemoglobins with Low Oxygen Affinity 181
 - 2. The Hb M Variants 182
- E. Hemolytic Anemia (“Congenital Heinz–Body Anemia”): The Unstable Hemoglobins 186
- F. The Thalassemias 191
 - 1. Pathogenesis 191
 - 2. The Phenotypes of the Thalassemia Syndromes 193
 - a) The α -Thalassemia Syndromes 193
 - b) Structural Hemoglobin Variants with α -Thalassemia-like Expression 199
 - c) The β Thalassemia Syndromes 201
 - d) Structural Hemoglobin Variants that are Expressed as β Thalassemia 204
 - e) α Thalassemia/ β Thalassemia Syndromes 205
 - f) The δ Thalassemias 206
 - g) Thalassemia/Abnormal Hemoglobin Syndromes 206
- G. The Syndromes of Hereditary Persistence of Fetal Hemoglobin 209
 - 1. The Phenotypes of the HPFH Syndromes 209
 - 2. Hereditary Persistence of Fetal Hemoglobin in Combination with Thalassemia or Structural Hemoglobin Variants 212
 - 3. Chromosomal Abnormalities Associated with a Prolongation or Delay of Hemoglobin Switching 213
- H. Precocious Synthesis of Adult Hemoglobin 213

**7. *The Genetics of the Human Globin Gene Loci:
Formal Genetics and Gene Linkage* 215**

- A. The Formal Genetics of the Human Hemoglobin System 215
 - 1. The β -Globin Locus 216
 - 2. The δ -Globin Locus 218
 - 3. The γ -Globin Loci 220
 - 4. The ϵ -Globin Locus 221
 - 5. The α -Globin Loci 221
 - 6. The ζ -Globin Locus 223
- B. New Globin-Gene Mutations 224
- C. Acquired (Non-genetic) Thalassemias 226
- D. Linkage Relationships Involving Polymorphic Sites in the Regions of the Globin Genes 227
 - 1. Restriction Fragment Length Polymorphisms (RFLPs) in the β -Globin Gene Cluster 228
 - 2. Linkage Relationships of β -Globin Gene Restriction Fragment Length Polymorphisms 230
 - 3. Polymorphisms Within the β -Globin Gene 232
 - 4. Haplotype Associations with β Thalassemia 233

**8. *The Geographic Distribution
of Globin Gene Variation* 237**

- A. Distribution of the Hemoglobin Variants and Thalassemias 237
- B. The Malaria Hypothesis 239
 - 1. Geographic and Epidemiologic Evidence in Support of the Malaria Hypothesis 240
 - 2. Experimental Evidence Related to Malarial Parasite Infectivity 243
- C. Molecular Approaches to the Study of Genetic Diversity of the Globin Gene Alleles 245
 - 1. Origins of the β^E -Globin Gene 245
 - 2. The Origins of the β^S -Globin Gene 247
 - 3. Other Globin Mutations Associated with Multiple Haplotypes 249

**9. *Laboratory Identification, Screening, Education,
and Counseling for Abnormal Hemoglobins
and Thalassemias* 251**

- A. The Laboratory Identification of Abnormal Hemoglobins and Thalassemias 251

1. Blood Count Measurements 251
 2. Electrophoretic Methods 252
 - a) Hemoglobin Electrophoresis at Alkaline pH 252
 - b) Citrate Agar Gel Electrophoresis 253
 - c) Globin Chain Electrophoresis 255
 - d) Measurement of the Electrophoretic Mobility of Hemoglobins and Globin Chains 255
 - e) Isoelectric Focusing 255
 3. Other Methods for Abnormal Hemoglobin Characterization 257
 - a) Tests for Sickle Hemoglobin 257
 - b) Testing for Hemoglobin Functional Abnormalities and Instability 258
 4. The Quantitative Estimation of Hemoglobins 258
 5. Structural Characterization of Abnormal Hemoglobins 260
 - B. Screening for Abnormal Hemoglobins and Thalassemias 260
 1. Screening to Determine the Variety and Frequency of Abnormal Globin Genes 261
 2. Newborn Screening 262
 3. Screening for Abnormal Hemoglobins Prior to Surgery or Childbirth 263
 4. Screening of Volunteer Adults 263
 - a) Approaches to Education and Screening 263
 - b) Genetic Counseling 266
 - C. Antenatal Diagnosis 267
 1. Diagnostic Methods Utilizing Fetal Blood 268
 - a) Fetal Blood Sampling 268
 - b) Analysis of Fetal Blood 269
 2. Methods Which Utilize Fetal DNA 271
 - a) Fetal DNA Sampling 271
 - b) Fetal DNA Analysis 271
 3. The Impact of Programs for Antenatal Diagnosis 276
- 10. *Approaches to the Treatment of the Hemoglobin Disorders* 277**
- A. Current Forms of Treatment for Patients with Hemoglobin Disorders 277
 1. Transfusion Therapy 277
 2. Other Therapy for the Management of Patients with Sickle Cell Disease and Thalassemia 279
 - B. New Directions in Therapy 280
 1. Anti-sickling Therapy 280

2. Bone Marrow Transplantation 283
3. Chemotherapy for the Stimulation of Fetal Hemoglobin Synthesis 284
4. Gene Therapy 287
