Long Papers

Radiological Background

G.S. LODWICK, Pictorial Information Systems and Radiology Improving the Quality of Communications	1
1. Introduction	1
2. Radiology information management and costs	5
3. File management	7
4. Communications problems with referring physicians	10
5. How can we improve communications in Radiology?	11
6. Advantages of PACS	19
7. Conclusions	24
References	25

S. NUDELMAN, Image Acquisition Devices and Their Application to Diagnostic Medicine	29
Introduction	29
Devices and applications	31
1. Light and photoelectronic imaging devices	31
a. Types	31
b. Applications	39
2. X-ray imaging devices and systems for radiology	46
a. Shadowgraphs	46
b. Device structures	48
c. Subtraction imaging	56
References	98

Information System Aspects

A.R. BAKKER, Integrated Hospital Information Systems	105
1. On data in a hospital and their use	106
2. The concept HIS and its position in the hospital	108
3. Integration	113
4. Application of a HIS	114
5. Performance aspects	117
6. Data protection aspects	123
7. An example of a HIS	126
8. Costs of a hospital information system	131
9. Benefits and evaluation	136
10. Lessons to be learned	137

11. On the relations between a HIS and a PACS	140
12. Further HIS developments and problems involved	141
References	148

D. MEYER-EBRECHT, On the Architecture for Pictorial Information Systems	151
Basic ideas on Architecture	151
The particular role of architecture in the medical image domain	153
A modeling concept	157
An overall PACS philosophy	161
A hierarchical image mass storage concept	164
A unifying image coding concept	167
A modular image processor architecture for high power work stations	169
References	179

Aspects of Image Presentation

G.T. HERMAN, Three-Dimensional Computer Graphic Display in Medicine: The MIPG Perspective	181
Introduction	181
Discrete 3D scenes	185
Objects and their surfaces	187
Surface detection of 1-objects in binary scenes	192
Display of object surfaces	193
Recent advances in the cube-like approach	196
The computer program 3D83	198
Summary	206
References	208

S.M. PIZER, Psychovisual Issues in the Display of Medical Images	211
1. Introduction	211
2. Spatial issues of display	212
3. Intensity issues of display	217
4. Other visual dimensions: Motion and 3D	230
5. Summary	232
References	232

S.M. PIZER, Systems for 3D Display in Medical Imaging	235
1. Introduction	235
2. Reflective display systems	237
3. Self-luminous display systems	242
4. Conclusion	247
References	248

Computer Science Tools

J. NIEVERGELT, Issues in the Design of Human-Computer Interfaces	251
1. The computer-driven screen as a communications medium	253
2. Survey and classification of errors	253
3. An interactive system as seen by the user	255
4. Is a standard man-machine interface possible?	259

5. Programming the man-machine interface	261
References	262
J.W. SCHMIDT, W. LAMERSDORF, Programming Support for Data-Intensive Applications	263
1. Introduction: database programming	263
2. A programmer's approach to the relational model of data	264
3. Some high-level language constructs for relations	268
4. Support for database integrity, recovery and concurrency	274
5. Requirements for compound object modelling	278
6. Extended constructs for compound object definition	282
7. Extended constructs for compound object operation	286
8. Concluding remarks	288
References	289
I. HOFMANN, H. NIEMANN, G. SAGERER, Knowledge-Based and Expert Systems: Representation and Use of Knowledge	293
1. Introduction	294
2. An overview of knowledge-based and expert systems	297
3. Representation and use of knowledge	306
4. A special application: a pictorial knowledge-based system	315
5. Results and future aspects	326
References	329
K. ASSMANN, R. VENEMA, K.H. HOHNE, Software Tools for the Development of Pictorial Information Systems in Medicine – The ISQL Experience –	
1. Objectives and Problems	333
2. The ISQL Approach	336
3. PACS – Functions, Concepts and Realization with the tool ISQL	340
1. Integration into the departmental or hospital organization	340
2. Management of images	344
3. Human computer communication	345
4. User environments	348
5. Further developments	350
6. Software properties of the tool ISQL	352
4. Conclusion	352
References	353
<i>First Experiences</i>	
D.F. PRESTON, S.J. DWYER, W.H. ANDERSON et al., Experience with a Prototype PACS System in a Clinical Environment	357
On-line radiology networking	357
Daily generation of digital data	358
Daily requirements of digital transmission	359
Interactive diagnosis display station	360
Hard copy recording	361
Long-term archiving	361
PACS standards	362
Summary	363
References	364

Short Papers

Radiological Aspects

H.K. HUANG, Recent Developments in Digital Radiology	369
R.A. BAUMANN, The Future of Digital Computers in Medical Imaging	381

System Design

G.Q. MAGUIRE Jr., Looking Back at PACS Attempts – What has Happened Since PACS I	391
TH. WENDLER, R. GREWER, K.J. MONNICH, H. SVENSSON, Design Considerations for Multi-Modality Medical Image Workstations	401
H.U. LEMKE, Medical Work Stations in Radiology	421
Y. BIZAIS, M. BABA-AMI, E. BOISSINOT, S. ROY, The DIMI System Philosophy and State of Development	433

Image Presentation

J.K. UDUPA, HSUI-MEI HUNG, LIH-SHYANG CHEN, Interactive Display of 3D Medical Objects	445
R. LENZ, P.E. DANIELSSON, S. CRONSTROM, B. GUDMUNDSSON, Presentation and Perception of 3D Images	459
F.R.P. BOECKER, G. WITTE, K.H. HOHNE, Experiments with Three-dimensional Reconstruction of Ventriculograms using automatic contour detection	469
J.P.J. DE VALK, W.J.M. EPPING, A. HERINGA, Systematic Use of Colour in Biomedical Data Display	485

Diverse Applications

H.S. RANU, 3D Model of Vertebra for Spinal Surgery	497
C. NAHMIAS, E.S. GARNETT, Correlation Between CT, NMR and PT. Findings in the Brain	507
H. DAHLIN, P. EKSTROM, I.-L. LAMM, Digital Imaging for Planning of Radiation Therapy – Practical Considerations	515
Author Index	525
