## ***Symposium in Immunology I – T-Cell Function and T-Cell Defects***

### *T-Cell Function and T-Cell Defects*

|                                                                                                                                                                                |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Self-Nonself Discrimination by Developing and Mature T Cells<br><i>H. von Boehmer</i> . . . . .                                                                                | 3  |
| Vaccination in Immunodeficiency<br><i>S. C. Meuer, L. Qiao, A. Schirren, H. Völkel and H. Köhler</i> . . . . .                                                                 | 19 |
| Induction of Peripheral Tolerance to Class I MHC Alloantigenic<br>Cells in Adult Mice<br><i>H. Wagner and K. Heeg</i> . . . . .                                                | 31 |
| Analysis of Human Immunodeficiency Virus 1 Envelope Proteins:<br>Contribution of Cysteine Residues to Envelope Function<br><i>E. Tschachler and M. S. Reitz, Jr.</i> . . . . . | 36 |

### *Clinical Aspects and Treatment*

|                                                                                                                                                                                                                                                                          |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Immunodeficiency and Graft-versus-Host Disease:<br>Opposing Features of Allogenic Bone Marrow Transplantation<br><i>C. Huber and D. Niederwieser</i> . . . . .                                                                                                           | 47 |
| Clinical and Immunological Approach to the Diagnosis<br>of Immunodeficiencies<br><i>H. H. Peter, M. Armbruster, E. Baumert, H. P. Buscher, R. Dräger,<br/>E. W. Herbst, A. Jahreis, A. Kliche, J. A. Rump, P. Vaith,<br/>G. Wolff-Vorbeck and M. Schlesier</i> . . . . . | 51 |
| Bone Marrow Transplantation in the Treatment of Congenital T Cell<br>Disorders<br><i>W. Friedrich, C. Knobloch and W. Hartmann</i> . . . . .                                                                                                                             | 67 |

|                                                                                                                                       |    |
|---------------------------------------------------------------------------------------------------------------------------------------|----|
| Investigation of Immune Responses After Vaccination<br>in Immunocompromised Populations<br><i>M. M. Eibl and H. M. Wolf</i> . . . . . | 76 |
|---------------------------------------------------------------------------------------------------------------------------------------|----|

***Symposium in Immunology II –  
Autoimmunity – Basic and Clinical Aspects***

***Immunologic Basis of Autoimmunity***

|                                                                                                                                                  |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Structure and Function of MHC Class I Molecules<br><i>H. G. Rammensee</i> . . . . .                                                              | 95  |
| T-Cell Receptor Variable Region Repertoire in Lymphocytes from<br>Rheumatoid Arthritis Patients<br><i>U. Krawinkel and G. Pluschke</i> . . . . . | 111 |

***Autoantigens and Models of Autoimmunity  
(Clinical Research)***

|                                                                                                                                                                                            |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Transgenic Models to Study Diseases of the Nervous System:<br>An In Vivo Approach to Dissect Complex Pathogenetic Networks<br><i>L. Mucke</i> . . . . .                                    | 121 |
| Mechanisms of Extrathymic Tolerance<br><i>B. Arnold, G. Schönrich and G. J. Hämmerling</i> . . . . .                                                                                       | 132 |
| Lysosomal Proteins as Autoantigens of Clinical Relevance<br><i>W. L. Gross, B. K. Flesch and E. Csernok</i> . . . . .                                                                      | 146 |
| Heat-Shock Proteins and Autoimmunity<br><i>S. H. E. Kaufmann</i> . . . . .                                                                                                                 | 163 |
| Cytochrome P450 Enzymes as Autoantigens in Autoimmune<br>Hepatitis<br><i>M. P. Manns</i> . . . . .                                                                                         | 171 |
| Myelin-Specific Autoimmune T Cells in the Pathogenesis of<br>Multiple Sclerosis: Their Characteristics and Possible Approaches to<br>Immunospecific Therapy<br><i>H. Wekerle</i> . . . . . | 177 |

|                                                                                                                                                                                                                                                                                 |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Adverse Immune Reactions to Drugs (Gold, Procainamide) and Environmental Chemicals (Mercury, Platinum): The Role of Phagocytic Cells in Generating Immunogenic Metabolites<br><i>M. Kubicka-Muranyi, C. Goebel, P. Griem, H.-C. Schuppe, J. Utrecht and E. Gleichmann</i> ..... | 189 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

### *New Therapeutic Trends in Autoimmunity*

|                                                                                                                                                                  |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Current Principles and Perspectives in the Treatment of Autoimmune Disease<br><i>H. H. Peter</i> .....                                                           | 213 |
| Immunological Intervention with Chimeric CD4 Monoclonal Antibodies<br><i>G. Riethmüller, C. Reiter and E. P. Rieber</i> .....                                    | 221 |
| Molecular Mechanisms of Cyclosporin A<br><i>K. Resch and M. Szamel</i> .....                                                                                     | 229 |
| Methotrexate in Rheumatoid Arthritis<br><i>M. E. Weinblatt</i> .....                                                                                             | 241 |
| Intravenous Immunoglobulins in the Treatment of Autoimmune Diseases<br><i>V. Hurez and M. D. Kazatchkine</i> .....                                               | 255 |
| Plasmapheresis and Subsequent Pulse Cyclophosphamide in Systemic Lupus Erythematosus<br><i>H. H. Euler</i> .....                                                 | 263 |
| The CD2 Molecular Complex: An Accessory Receptor Mediating Secondary Signals for Human T Cell Activation<br><i>S. C. Meuer, Y. Samstag and B. Schraven</i> ..... | 281 |
| Induction of Selective Immunosuppression by Administration of MHC Class II Binding Peptides<br><i>L. Adorini</i> .....                                           | 297 |
| Interferon-Gamma Therapy of Rheumatoid Arthritis<br><i>E.-M. Lemmel</i> .....                                                                                    | 305 |
| Subject Index .....                                                                                                                                              | 315 |
