

Contents

1	A Quick Start into DAEalton	1
1.1	Download and Installation	1
1.2	Elastomechanical Example	1
1.3	Principle of Virtual Displacements	2
1.4	Discretization of Basic Equations	3
1.5	Run DAEalton	5
2	Fundamentals of Solid (Continuum) Mechanics	11
2.1	Vector-, Matrix- and Tensor-Notation	11
2.2	Kinematics and Deformation Gradient $\mathbf{F}$	12
2.2.1	Definitions	12
2.2.2	Properties and Derivatives of $\mathbf{F}$	13
2.2.3	Implementation	15
2.3	Strain- and Stress-Tensors	15
2.3.1	A Selection	15
2.3.2	Invariants and Derivatives of Strain Tensors	16
2.3.3	Stress Representation — VOIGT Notation	16
2.4	Rate of Strain Energy — Stress Power, Internal Energy Turn over	18
2.5	Variational Principle and Weak Form	18
2.6	Discretization in Space	19
2.6.1	Preparation and Rearrangement of Equations	19
2.6.2	Linear Shape Functions	20
2.6.3	Derivatives of the Shape Functions	21
2.6.4	Volume Integration	23
2.7	General Treatment of Nonlinearities — Solution by NEWTON-Procedure	25
2.7.1	Linearization	26
2.7.2	Iteration	26

3	Constitutive Behavior	27
3.1	The Materials Point of View	27
3.1.1	Stress Response	27
3.1.2	The Material Modulus $\mathbb{D}$	27
3.2	Selected Constitutive Models	28
3.2.1	Hyperelasticity	28
3.2.2	Parameter Calibration	31
3.2.3	Inelastic Behavior	32
4	FEM Implementation within MATLAB	37
4.1	MATLAB Basics	37
4.2	Structure of DAE _{dal} on	38
4.3	Preprocessing	39
4.3.1	Structure of Input-Files and Processing	39
4.4	Numerical Solution	39
4.4.1	Assembly Procedure — The Global System	39
4.4.2	NEWTON-Iteration	40
4.5	Postprocessing	41
4.5.1	Mesh Representation, Loads and Boundary Conditions	41
4.5.2	Contour-Plots	41
4.5.3	GUI — Realization of a Graphical Environment	41
4.6	Writing Extensions for DAE _{dal} on	42
4.6.1	Continuum Element <code>elem4.m</code> with 4-Nodes in Plane Strain	42
4.6.2	Formulation for Rotational Symmetry of <code>elem4.m</code>	43
4.6.3	EAS <i>Expansion</i> of <code>elem4.m</code>	44
4.6.4	General Truss Element <code>elem10.m</code> with 2 Nodes	47
4.6.5	Material Models	48
5	Applications and Examples	51
5.1	Crane Modeled by 2D-Trusses	51
5.2	Axisymmetric Applications	53
5.3	Crack Tip Simulation	54
5.3.1	K_I -Field	54
5.3.2	Analysis of Plastic Zone within K_I -Field	57
6	What Does DAE_{dal}on Mean? — Background for Computational System — and Greek Mythology	59
