|                                                                          |        |
|--------------------------------------------------------------------------|--------|
| <b>Chapter I. The Continuum</b> .....                                    | 1      |
| §1 What Are the Real Numbers? .....                                      | 1      |
| §2 Language as Part of Mathematics .....                                 | 6      |
| §3 Elementary Theory of Real Numbers .....                               | 14     |
| §4 Non-Standard Analysis .....                                           | 28     |
| §5 Axiom of Choice and Continuum Hypothesis .....                        | 37     |
| <br><b>Chapter II. Geometry</b> .....                                    | <br>43 |
| §1 Space and Mathematics .....                                           | 43     |
| §2 Axiomatization by Means of Coordinates .....                          | 45     |
| §3 Metatheoretical Questions and Methods in Elementary<br>Geometry ..... | 54     |
| §4 Geometric Constructions .....                                         | 64     |
| <br><b>Chapter III. Algorithmics</b> .....                               | <br>74 |
| §1 What is an Algorithm? .....                                           | 74     |
| §2 The Existence of Combinatory Algebras: Combinatory<br>Logic .....     | 78     |
| §3 Concrete Combinatory Algebras .....                                   | 85     |
| §4 Lambda Calculus .....                                                 | 89     |
| §5 Computability and Combinators .....                                   | 94     |
