Introduction	1
---------------------------	----------

Part I Fundamentals

1. The Evolution of Skyrme's Approach	11
1.1 The "Mesonic Fluid" Model	11
1.2 The Chiral Modification	13
1.3 The Two-Dimensional Simplified (sine-Gordon) Model	16
1.3.1 The Idea of Topological Charge	17
1.3.2 The Abelian Bosonization or Fermi-Bose Correspondence	19
1.4 The Baryon Model – Topological Skyrmions	21
1.4.1 The (3+1)-dimensional "Angular" Variables	21
1.4.2 The Topological Charge in the (3+1) Model	23
1.4.3 The Skyrme Model Dynamics	24
1.5 Skyrme's Results and Conjectures	27
2. Elements of Field Theory with Topological Charges	30
2.1 Geometric Viewpoint on the Classical Field Theory	30
2.1.1 The Configuration Space	31
2.1.2 Homotopy as a Formalization of Dynamical Evolution	33
2.2 The Topological Classification of Solutions	36
2.2.1 Homotopy Classes of the sine-Gordon Model	36
2.2.2 The Fundamental and Higher Homotopy Groups ...	38
2.3 Isham's Construction of Topological Charges	40
2.3.1 Cohomology – Homotopy Relationship in Brief	40
2.3.2 Derivation of Topological Charge in the Skyrme Model	42
2.4 Guiding Principles in the Choice of Model Lagrangians	45
2.4.1 Chirally Invariant Lagrangians	46
3. Topological Stability	49
3.1 Some General Remarks	49
3.2 The Hobart-Derrick Theorem	52
3.3 Soliton Stability and the Second Variation Structure of the Lyapunov Functional	55

3.3.1	The Lyapunov Stability of Solitons	55
3.3.2	The Generalized Hobart-Derrick Theorem	57
3.3.3	The Q -stability of Solitons	59
3.4	The Topological Stability of Skyrmions	63

Part II Methods for the Study of Skyrmions

4. The Principle of Symmetric Criticality	67
4.1 Some Auxiliary Information	67
4.2 The Symmetry Group of the Skyrme Energy Functional ...	69
4.3 The Coleman-Palais Theorem	72
4.4 The Structure of Invariant Fields (Ansätze)	77
5. Absolute Minimum of the Energy Functional	80
5.1 Method of Extending the Phase Space	80
5.2 The Spherical Rearrangement Method	84
5.3 Skyrmion as the Absolute Minimizer of the Energy	86
6. The Existence of Skyrmions	89
6.1 The Field Equations for Skyrmions	89
6.2 The Direct Method in the Calculus of Variations	92
6.3 An Outline of the Proof of the Skyrmion Existence	94
7. Multi-Baryon and Rotating Skyrmion States	99
7.1 The Problem of Bound States and Interaction	
Among Skyrmions	99
7.1.1 The Invariant Fields in Higher Homotopy Classes ..	102
7.2 Minima of the Energy Functional in Higher	
Homotopy Classes	104
7.3 The Rotating Skyrmion	109
8. Quantization of Skyrmions	113
8.1 Bogolubov's Method of Collective Coordinates	114
8.2 Canonical Quantization of Skyrmions	116
8.3 The "Non-Rigid" Quantization of Skyrmions	120

Part III Hadron Physics Applications

9. The Skyrme Model and QCD	127
9.1 Express Review of the QCD Present Status	127
9.2 $1/N$ -Expansion	131
9.3 Effective Meson Theory from QCD	137
9.3.1 The Low-energy QCD Attributes	138
9.3.2 The Topological Charge as the Baryon Number ...	140
9.3.3 Effective Chiral Lagrangians from QCD	142

10. Skyrmion as a Fermion	147
10.1 The Finkelstein's Double-Valued Functionals	147
10.2 The Charge-Monopole Multi-valued Action	152
10.3 The Wess-Zumino Term and Witten's Realization of Skyrme's Suggestion	155
10.3.1 The Wess-Zumino Term in Effective Chiral Lagrangian	157
10.3.2 Spin and Statistics of Skyrmions	160
11. Quantized $SU(3)$ Skyrmions and Their Interactions	164
11.1 The $SU(3)$ Generalized Lagrangian in Terms of Collective Coordinates	164
11.1.1 The $SU(3)$ Skyrme "Collective" Lagrangian	165
11.1.2 The Wess-Zumino Term for Collective Coordinates ..	166
11.1.3 The Symmetry Breaking Term	168
11.2 Quantization in the Presence of the Wess-Zumino Term ...	171
11.2.1 Canonical Quantization	171
11.2.2 Symmetries, Constraint and Spectrum	173
11.2.3 Static Observables and Mass Formulae	178
11.3 Skyrmions' Interactions: Nuclear Forces and Nuclear Matter	181
11.3.1 The Skyrmion-Skyrmion Interaction and Nuclear Forces	182
11.3.2 The Meson-Baryon Interaction	184
11.3.3 The Skyrme Model and Nuclear Matter	187
Concluding Remarks	192

Part IV Appendices

A. Chiral Symmetry	197
A.1 Algebraic Aspects of Chiral Symmetry	198
A.2 Geometric Aspects of Chiral Symmetry	200
B. A Concise Account of Algebraic Topology	204
B.1 Smooth Manifolds	204
B.2 Tangent Spaces, Vector Fields and Lie Algebras	208
B.3 Differential Forms	212
B.4 Integration on Manifolds and De Rham Co-Homologies	217
B.5 Fundamental Groups, Homotopy Groups and Some Other Topological Invariants	221
C. Methods of Reduction	229
C.1 Reduction to Static Field Configurations	229
C.2 Reduction to G -Invariant Fields	230
C.3 Spherical Rearrangement Technique: An Illustration	232

D. Proofs of Stability and Existence Theorems	234
D.1 Proof of Generalized Hobart-Derrick Theorem	234
D.2 Existence of the Axially-Symmetric Solutions	236
D.3 Existence of a Nonsingular Matrix	238
E. Finkelstein-Williams' Spinor Structures	239
References	243
Subject Index	261
