Contents

Foreword	7
Chapter 1. Critical Points of Functions	10
§ 1. Invariants of Critical Points	10
1.1. Degenerate and Nondegenerate Critical Points	10
1.2. Equivalence of Critical Points	11
1.3. Stable Equivalence	12
1.4. The Local Algebra and the Multiplicity of a Singularity	13
1.5. Finite Determinacy of an Isolated Singularity	14
1.6. Lie Group Actions on Manifolds	15
1.7. Versal Deformations of a Critical Point	16
1.8. Infinitesimal Versality	17
1.9. The Modality of a Critical Point	18
1.10. The Level Bifurcation Set	19
1.11. Truncated Versal Deformations and the Function Bifurcation Set	20
§ 2. The Classification of Critical Points	22
2.1. Normal Forms	22
2.2. Classes of Low Modality	23
2.3. Singularities of Modality ≤ 2	24
2.4. Simple Singularities and Klein Singularities	25
2.5. Resolution of Simple Singularities	26
2.6. Unimodal and Bimodal Singularities	28
2.7. Adjacency of Singularities	30
2.8. Real Singularities	32

§ 3. Reduction to Normal Forms	34
3.1. The Newton Diagram	35
3.2. Quasihomogeneous Functions and Filtrations	36
3.3. The Multiplicity and the Generators of the Local Algebra of a Semi-Quasihomogeneous Function	38
3.4. Quasihomogeneous Maps	38
3.5. Quasihomogeneous Diffeomorphisms and Vector Fields	40
3.6. The Normal Form of a Semi-Quasihomogeneous Function	42
3.7. The Normal Form of a Quasihomogeneous Function	43
3.8. The Newton Filtration	45
3.9. The Spectral Sequence	47
3.10. Theorems on Normal Forms for the Spectral Sequence	49
Chapter 2. Monodromy Groups of Critical Points	50
§ 1. The Picard-Lefschetz Theory	51
1.1. Topology of the Nonsingular Level Manifold	51
1.2. The Classical Monodromy and the Variation Operator	53
1.3. The Monodromy of a Morse Singularity	54
1.4. The Monodromy Group of an Isolated Singularity	56
1.5. Vanishing Cycles and Distinguished Bases	58
1.6. The Intersection Matrix of a Singularity	61
1.7. Stabilization of Singularities	63
1.8. Dynkin Diagrams	64
1.9. Transformations of a Basis and of its Dynkin Diagram	64
1.10. The Milnor Fibration over the Complement of the Level Bifurcation Set	68
1.11. The Topological Type of a Singularity Along the μ -Constant Stratum	70
§ 2. Dynkin Diagrams and Monodromy Groups	72
2.1. Intersection Matrices of Singularities of Functions of Two Variables	72
2.2. The Intersection Matrix of a Direct Sum of Singularities	75
2.3. Pham Singularities	77
2.4. The Polar Curve and the Intersection Matrix	77
2.5. Modality and Quadratic Forms of Singularities	82
2.6. The Monodromy Group and the Intersection Form	84
2.7. The Monodromy Group in the Skew-Symmetric Case	87
§ 3. Complex Monodromy and Period Maps	88
3.1. The Cohomology Bundle and the Gauss-Manin Connection	88
3.2. Sections of the Cohomology Bundle	89
3.3. The Vanishing Cohomology Bundle	90
3.4. The Period Map	91
3.5. The Residue Form	91
3.6. Trivializations of the Cohomology Bundle	92

3.7. The Classical Complex Monodromy	94
3.8. Differential Equations and Asymptotics of Integrals	95
3.9. Nondegenerate Period Maps	98
3.10. Stability of Period Maps	100
3.11. Period Maps and Intersection Forms	101
3.12. The Characteristic Polynomial and the Zeta Function of the Monodromy Operator	102
§ 4. The Mixed Hodge Structure in the Vanishing Cohomology	105
4.1. The Pure Hodge Structure	105
4.2. The Mixed Hodge Structure	106
4.3. The Asymptotic Hodge Filtration in the Fibres of the Cohomology Bundle	108
4.4. The Weight Filtration	108
4.5. The Asymptotic Mixed Hodge Structure	110
4.6. The Hodge Numbers and the Spectrum of a Singularity	111
4.7. Computing the Spectrum	112
4.8. Semicontinuity of the Spectrum	114
4.9. The Spectrum and the Geometric Genus	115
4.10. The Mixed Hodge Structure and the Intersection Form	116
4.11. The Number of Singular Points of a Complex Projective Hypersurface	116
4.12. The Generalized Petrovskii-Oleĭnik Inequalities	118
§ 5. Simple Singularities	119
5.1. Reflection Groups	119
5.2. The Swallowtail of a Reflection Group	122
5.3. The Artin-Brieskorn Braid Group	124
5.4. Convolution of Invariants of a Coxeter Group	125
5.5. Root Systems and Weyl Groups	127
5.6. Simple Singularities and Weyl Groups	129
5.7. Vector Fields Tangent to the Level Bifurcation Set	130
5.8. The Complement of the Function Bifurcation Set	132
5.9. Adjacency and Decomposition of Simple Singularities	132
5.10. Finite Subgroups of SU_2 , Simple Singularities, and Weyl Groups	133
5.11. Parabolic Singularities	134
§ 6. Topology of Complements of Discriminants of Singularities	138
6.1. Complements of Discriminants and Braid Groups	138
6.2. The mod-2 Cohomology of Braid Groups	138
6.3. An Application: Superposition of Algebraic Functions	140
6.4. The Integer Cohomology of Braid Groups	140
6.5. The Cohomology of Braid Groups with Twisted Coefficients	141
6.6. Genus of Coverings Associated with an Algebraic Function, and Complexity of Algorithms for Computing Roots of Polynomials	142

6.7. The Cohomology of Brieskorn Braid Groups and Complements of the Discriminants of Singularities of the Series C and D	143
6.8. The Stable Cohomology of Complements of Level Bifurcation Sets	143
6.9. Characteristic Classes of Milnor Cohomology Bundles	146
6.10. Stable Irreducibility of Strata of Discriminants	147
 Chapter 3. Basic Properties of Maps	 147
§ 1. Stable Maps and Maps of Finite Multiplicity	148
1.1. The Left-Right Equivalence	148
1.2. Stability	149
1.3. Transversality	151
1.4. The Thom-Boardman Classes	153
1.5. Infinitesimal Stability	155
1.6. The Groups $\mathcal{G}$ and $\mathcal{K}$	156
1.7. Normal Forms of Stable Germs	157
1.8. Examples	157
1.9. Nice and Semi-Nice Dimensions	160
1.10. Maps of Finite Multiplicity	161
1.11. The Number of Roots of a System of Equations	162
1.12. The Index of a Singular Point of a Real Germ, and Polynomial Vector Fields	163
§ 2. Finite Determinacy of Map-Germs, and Their Versal Deformations	165
2.1. Tangent Spaces and Codimensions	166
2.2. Finite Determinacy	166
2.3. Versal Deformations	167
2.4. Examples	168
2.5. Geometric Subgroups	170
2.6. The Order of a Sufficient Jet	174
2.7. Determinacy with Respect to Transformations of Finite Smoothness	178
§ 3. The Topological Equivalence	179
3.1. The Topologically Stable Maps are Dense	179
3.2. Whitney Stratifications	179
3.3. The Topological Classification of Smooth Map-Germs	181
3.4. Topological Invariants	182
3.5. Topological Triviality and Topological Versality of Deformations of Semi-Quasihomogeneous Maps	183
 Chapter 4. The Global Theory of Singularities	 185
§ 1. Thom Polynomials for Maps of Smooth Manifolds	186
1.1. Cycles of Singularities and Topological Invariants of Maps	186

1.2. Thom's Theorem on the Existence of Thom Polynomials	187
1.3. Resolution of the Singularities of the Closures of the Thom-Boardman Classes	188
1.4. Thom Polynomials for Singularities of First Order	189
1.5. Survey of Results on Thom Polynomials for Singularities of Higher Order	190
§ 2. Integer Characteristic Classes and Universal Complexes of Singularities	191
2.1. Examples: the Maslov Index and the First Pontryagin Class	192
2.2. The Universal Complex of Singularities of Smooth Functions	193
2.3. Cohomology of the Complexes of R_0 -Invariant Singularities, and Invariants of Foliations	196
2.4. Computations in Complexes of Singularities of Functions. Geometric Consequences	197
2.5. Universal Complexes of Lagrangian and Legendrian Singularities	199
2.6. On Universal Complexes of General Maps of Manifolds	201
§ 3. Multiple Points and Multisingularities	201
3.1. A Formula for Multiple Points of Immersions, and Embedding Obstructions for Manifolds	201
3.2. Triple Points of Singular Surfaces	202
3.3. Multiple Points of Complex Maps	202
3.4. Self-Intersections of Lagrangian Manifolds	203
3.5. Complexes of Multisingularities	203
3.6. Multisingularities and Multiplication in the Cohomology of the Target Space of a Map	206
§ 4. Spaces of Functions with Critical Points of Mild Complexity	207
4.1. Functions with Singularities Simpler than A_3	207
4.2. The Group of Curves Without Horizontal Inflexional Tangents	208
4.3. Homotopy Properties of the Complements of Unfurled Swallowtails	211
§ 5. Elimination of Singularities and Solution of Differential Conditions	212
5.1. Cancellation of Whitney Umbrellas and Cusps. The Immersion Problem	212
5.2. The Smale-Hirsch Theorem	213
5.3. The w.h.e.- and h-Principles	213
5.4. The Gromov-Lees Theorem on Lagrangian Immersions	215
5.5. Elimination of Thom-Boardman Singularities	215
5.6. The Space of Functions with no A_3 Singularities	216
§ 6. Tangential Singularities and Vanishing Inflexions	216
6.1. The Calculus of Tangential Singularities	216
6.2. Vanishing Inflexions: The Case of Plane Curves	217
6.3. Inflexions that Vanish at a Morse Singular Point	218

6.4. Integration with Respect to the Euler Characteristic, and its Applications	219
