

Contents

1. Introduction	1
2. The Independent-Electron Approximation	5
2.1 Starting Hamiltonian	6
2.2 Basis Functions and Basis Sets	8
2.3 Self-Consistent Field Approximation	10
2.4 Simplified SCF Computational Schemes	
2.4.1 Semi-empirical SCF Methods	19
2.4.2 Pseudopotentials	21
2.5 Koopmans' Theorem	25
2.6 Homogeneous Electron Gas	26
2.7 Local Exchange Potential – The X_α Method	32
2.8 Shortcomings of the Independent-Electron Approximation	33
2.9 Unrestricted SCF Approximation	37
3. Density Functional Theory	39
3.1 Thomas-Fermi Method	40
3.2 Hohenberg-Kohn-Sham Theory	41
3.3 Local-Density Approximation	44
3.4 Results for Atoms, Molecules, and Solids	49
3.5 Extensions and Limitations	52
4. Quantum-Chemical Approach to Electron Correlations	61
4.1 Configuration Interactions	63
4.1.1 Localized-Orbital Methods	66
4.1.2 Selection of Double Substitutions	68
4.1.3 Multireference CI	70
4.2 Coupled-Cluster Methods	74
4.3 Many-Body Perturbation Theory	77
5. The Projection Technique and Use of Local Operators	83
5.1 The Projection Technique	84
5.2 Local Operators	90
5.2.1 Physical Interpretation	92

5.2.2 Comparison with Other Methods	95
5.3 Simplified Correlation Calculations	97
6. Excited States	101
6.1 CI Calculations and Basis Set Requirements	102
6.2 Green's Function Method	104
6.2.1 Perturbation Expansions	109
6.2.2 The Projection Method	113
6.3 Local Operators	117
7. Finite-Temperature-Techniques	121
7.1 The Statistical Operator	122
7.2 Functional-Integral Method	127
7.2.1 Static Approximation	129
7.3 Monte Carlo Methods	132
7.3.1 Sampling Techniques	133
7.3.2 Ground-State Energy	135
8. Correlations in Atoms and Molecules	141
8.1 Atoms	142
8.2 Hydrocarbon Molecules	147
8.2.1 Analytic Expressions for Correlation-Energy Contributions	149
8.2.2 Simplified Correlation Calculations	151
8.3 Molecules Consisting of First-Row Atoms	160
8.4 Strength of Correlations in Different Bonds	164
8.5 Polymers	168
8.5.1 Polyethylene	168
8.5.2 Polyacetylene	168
8.6 Photoionization Spectra	174
9. Semiconductors and Insulators	179
9.1 Ground-State Correlations	180
9.1.1 Semi-empirical Correlation Calculations	180
9.1.2 Ab Initio Calculations	187
9.2 Excited States	190
9.2.1 Role of Nonlocal Exchange	192
9.2.2 The Energy Gap Problem	194
9.2.3 Hedins's <i>GW</i> Approximation	203
10. Homogeneous Metallic Systems	211
10.1 Fermi-Liquid Approach	212
10.2 Charge Screening and the Random Phase Approximation	221
10.3 Spin Fluctuations	230

11. Transition Metals	241
11.1 Correlated Ground State	242
11.2 Excited States.	250
11.3 Finite Temperatures.	251
11.3.1 Single-Site Approximation.	256
11.3.2 Two-Site Approximation.	262
11.3.3 Beyond the Static Approximation	263
12. Strongly Correlated Electrons	267
12.1 Molecules.	268
12.2 Kondo Effect	273
12.2.1 Variational Treatment of the Anderson Hamiltonian . . .	274
12.2.2 Schrieffer-Wolff Transformation	280
12.2.3 Kondo Divergency	282
12.2.4 Fermi-Liquid Description	285
12.3 Hubbard Hamiltonian	288
12.3.1 The Limits of One Dimension and Infinite Dimensions. .	290
12.3.2 Hubbard's Solution	293
12.3.3 Gutzwiller's Wavefunction and Approximation.	298
12.3.4 Slave Bosons in the Mean-Field Approximation.	302
12.3.5 Kanamori's t -Matrix Approach.	305
13. Heavy-Fermion Systems	309
13.1 The Fermi Surface and Quasiparticle Excitations	311
13.2 Model Hamiltonian and Slave Bosons.	316
13.3 Noncrossing Approximation	323
13.4 Variational Wavefunctions.	328
13.5 Quasiparticle Interactions	331
13.6 Quasiparticle-Phonon Interactions Based on Strong Correlations	333
14. Superconductivity and the High-T_c Materials	337
14.1 The Superconducting State	338
14.1.1 Pair States.	341
14.1.2 BCS Groundstate	344
14.1.3 Pair Breaking	349
14.2 Electronic Structure of the High- T_c Materials	351
14.3 2D Heisenberg Antiferromagnet.	358
14.3.1 Ground-State Energy	358
14.3.2 Motion of a Hole	363
14.4 Electronic Excitations in the Cu-O Planes.	367
Appendices	377
A. Relation Between $E_{xc}[\rho]$ and the Pair Distribution Function . . .	377

B. Derivation of Several Relations Involving Cumulants	378
C. Projection Method of Mori and Zwanzig.	381
D. Hund's Rule Correlation	383
E. Cumulant Representation of Correlation Functions.	387
F. Ionization Energies.	389
G. Diagrammatic Representation of Certain Expectation Values	390
H. Derivation of the Quasiparticle Equation.	393
I. Coherent Potential Approximation	396
J. The Lanczos Method	398
