Contents

Foreword	6
Chapter 1. Classification of Functions and Mappings	8
§ 1. Functions on a Manifold with Boundary	8
1.1. Classification of Functions on a Manifold with a Smooth Boundary	8
1.2. Versal Deformations and Bifurcation Diagrams	11
1.3. Relative Homology Basis	14
1.4. Intersection Form	14
1.5. Duality of Boundary Singularities	17
1.6. Functions on a Manifold with a Singular Boundary	17
§ 2. Complete Intersections	20
2.1. Start of the Classification	21
2.2. Critical and Discriminant Sets	24
2.3. The Nonsingular Fiber	26
2.4. Relations Between the Tyurina and Milnor Numbers	28
2.5. Adding a Power of a New Variable	29
2.6. Relative Monodromy	29
2.7. Dynkin Diagrams	30
2.8. Parabolic and Hyperbolic Singularities	31
2.9. Vector Fields on a Quasihomogeneous Complete Intersection	33
2.10. The Space of a Miniversal Deformation of a Quasihomogeneous Singularity	35
2.11. Topological Triviality of Versal Deformations	36
§ 3. Projections and Left-Right Equivalence	37
3.1. Projections of Space Curves onto the Plane	38
3.2. Singularities of Projections of Surfaces onto the Plane	39
3.3. Projections of Complete Intersections	43

3.4. Projections onto the Line	47
3.5. Mappings of the Line into the Plane	57
3.6. Mappings of the Plane into Three-Space	59
§ 4. Nonisolated Singularities of Functions	65
4.1. Transversal Type of a Singularity	65
4.2. Realization	66
4.3. Topology of the Nonsingular Fiber	66
4.4. Series of Isolated Singularities	67
4.5. The Number of Indices of a Series	68
4.6. Functions with a One-Dimensional Complete Intersection as Critical Set and with Transversal Type A_1	69
§ 5. Vector Fields Tangent to Bifurcation Varieties	79
5.1. Functions on Smooth Manifolds	79
5.2. Projections onto the Line	81
5.3. Isolated Singularities of Complete Intersections	82
5.4. The Equation of a Free Divisor	84
§ 6. Divergent and Cyclic Diagrams of Mappings	84
6.1. Germs of Smooth Functions	85
6.2. Envelopes	85
6.3. Holomorphic Diagrams	87
Chapter 2. Applications of the Classification of Critical Points of Functions	88
§ 1. Legendre Singularities	88
1.1. Equidistants	89
1.2. Projective Duality	90
1.3. Legendre Transformation	90
1.4. Singularities of Pedals and Primitives	91
1.5. The Higher-Dimensional Case	91
§ 2. Lagrangian Singularities	92
2.1. Caustics	92
2.2. The Manifold of Centers	93
2.3. Caustics of Systems of Rays	94
2.4. The Gauss Map	95
2.5. Caustics of Potential Systems of Noninteracting Particles	95
2.6. Coexistence of Singularities	97
§ 3. Singularities of Maxwell Sets	98
3.1. Maxwell Sets	98
3.2. Metamorphoses of Maxwell Sets	100
3.3. Extended Maxwell Sets	103
3.4. Complete Maxwell Set Close to the Singularity A_5	106
3.5. The Structure of Maxwell Sets Close to the Metamorphosis A_5	110

3.6. Enumeration of the Connected Components of Spaces of Nondegenerate Polynomials	112
§4. Bifurcations of Singular Points of Gradient Dynamical Systems	113
4.1. Thom's Conjecture	114
4.2. Singularities of Corank One	115
4.3. Guckenheimer's Counterexample	116
4.4. Three-Parameter Families of Gradients	117
4.5. Normal Forms of Gradient Systems D_4	118
4.6. Bifurcation Diagrams and Phase Portraits of Standard Families .	118
4.7. Multiparameter Families	120
Chapter 3. Singularities of the Boundaries of Domains of Function Spaces	121
§1. Boundary of Stability	122
1.1. Domains of Stability	122
1.2. Singularities of the Boundary of Stability in Low-Dimensional Spaces	122
1.3. Stabilization Theorem	123
1.4. Finiteness Theorem	124
§2. Boundary of Ellipticity	124
2.1. Domains of Ellipticity	124
2.2. Stabilization Theorems	124
2.3. Boundaries of Ellipticity and Minimum Functions	125
2.4. Singularities of the Boundary of Ellipticity in Low-Dimensional Spaces	126
§3. Boundary of Hyperbolicity	127
3.1. Domain of Hyperbolicity	127
3.2. Stabilization Theorems	127
3.3. Local Hyperbolicity	128
3.4. Local Properties of Domains of Hyperbolicity	129
§4. Boundary of the Domain of Fundamental Systems	131
4.1. Domain of Fundamental Systems and the Bifurcation Set	131
4.2. Singularities of Bifurcation Sets of Generic Three-Parameter Families	132
4.3. Bifurcation Sets and Schubert Cells	136
4.4. Normal Forms	140
4.5. Duality	141
4.6. Bifurcation Sets and Tangential Singularities	142
4.7. The Group of Transformations of Sets and Finite Determinacy .	143
4.8. Bifurcation Diagrams of Flattenings of Projective Curves	145
§5. Linear Differential Equations and Complete Flag Manifolds	146

Chapter 4. Applications of Ramified Integrals and Generalized Picard-Lefschetz Theories	149
§ 1. Newton's Theorem on Nonintegrability	150
1.1. Newton's Theorem and Archimedes's Example	150
1.2. Multi-dimensional Newton Theorem (Even Case)	151
1.3. Obstructions to Integrability in the Odd-Dimensional Case ...	152
1.4. Newton's Theorem for Nonconvex Domains	153
1.5. The Case of Nonsmooth Domains	154
1.6. Homological Formulation and the General Statement of the Problem	154
1.7. Localization and Lowering the Dimension in the Calculation of Monodromy	156
1.8. General Construction of the Variation Operators	157
1.9. The "Cap" Element	159
1.10. Ramification of Cycles Close to Nonsingular Points	160
1.11. Ramification Close to Individual Singularities	162
1.12. Stabilization of Monodromy Close to Strata of Positive Dimension	164
1.13. Ramification Around the Asymptotic Directions and Monodromy of Boundary Singularities	169
1.14. Pham's Formulas	171
1.15. Problems, Conjectures, Complements	172
§ 2. Ramification of Solutions of Hyperbolic Equations	173
2.1. Hyperbolic Operators and Hyperbolic Polynomials	174
2.2. Wave Front of a Hyperbolic Operator	175
2.3. Singularities of Wave Fronts and Generating Functions	175
2.4. Lacunas, Sharpness, Diffusion	176
2.5. Sharpness and Diffusion Close to the Simplest Singularities of Wave Fronts	177
2.6. The Herglotz-Petrovskii-Leray Integral Formula	178
2.7. The Petrovskii Criterion	179
2.8. Local Petrovskii Criterion	180
2.9. Local Petrovskii Cycle	181
2.10. C^∞ -Inversion of the Petrovskii Criterion, Stable Singularities of Fronts and Sneaky Diffusion	183
2.11. Normal Forms of Nonsharpness Close to Singularities of Wave Fronts	185
2.12. Construction of Leray and Petrovskii Cycles for Strictly Hyperbolic Polynomials	186
2.13. Problems	186
§ 3. Integrals of Ramified Forms and Monodromy of Homology with Nontrivial Coefficients	187
3.1. The Hypergeometric Function of Gauss	187

3.2. Homology of Local Systems	189
3.3. Meromorphy of the Integral of the Function P^λ	191
3.4. The Integral of the Function P^λ as a Function of P	194
3.5. Monodromy and Linear Independence of Hypergeometric Functions	197
3.6. Twisted Picard-Lefschetz Theory of Isolated Singularities of Smooth Functions and Representations of Hecke Algebras ...	198
 Chapter 5. Deformations of Real Singularities and Local Petrovskii Lacunas	199
§ 1. Local Petrovskii Cycles and their Properties	200
1.1. Definition of Local Petrovskii Cycles	201
1.2. Complex Conjugation	201
1.3. Boundary of the Petrovskii Class	201
1.4. Computation of Petrovskii Cocycles in Terms of Vanishing Cycles	201
1.5. Stabilization	203
§ 2. Local Lacunas for Concrete Singularities	204
2.1. Local Lacunas for Singularities that are Stably Equivalent to Extrema	204
2.2. The Number of Local Lacunas for the Tabulated Singularities .	204
2.3. Realization of Local Lacunas	208
2.4. Concerning the Proofs	212
§ 3. Complements of Discriminants of Real Singularities	212
3.1. Components of the Complement of the Discriminant of Simple Singularities	212
3.2. A Regular Search Algorithm for Morse Decompositions of Singularities	213
3.3. Remarks on the Realization of the Algorithm	215
3.4. Problems and Perspectives	216
 Bibliography	218
