

Contents

1. Introduction	1
2. Classical Description of Interference Phenomena in Radiation	8
2.1 The Classical Oscillator Model of Atomic Emission	8
2.2 A Classical Oscillator in a Magnetic Field	15
2.3 Emission from an Oscillator in a Magnetic Field	17
2.4 Emission from an Ensemble of Oscillators	20
2.5 Beats in Intensity	21
2.6 The Hanle Effect	23
2.7 Combination of Hanle Effect and Quantum Beats	25
2.8 Beat Resonances	26
2.9 Parametric Resonance	27
2.10 Conclusion	28
3. Quantum Mechanical Description of Interference Phenomena	30
3.1 The Density Matrix	30
3.2 Derivation of the Density Matrix of Ensembles of Excited States from the Wave Equation	32
3.3 The Equation of Motion of the Density Matrix	38
3.4 Spontaneous Emission	43
3.5 Limits of the Density Matrix Apparatus. The Scattering Matrix	44
3.6 Interference Signals	51
3.7 The Radiation Pattern and Polarization for Transitions Between Eigenstates of the Angular Momentum Operator	60
3.8 Influence of Interference Between States on the Polarization of Spontaneous Radiation	62
3.9 Redistribution of Radiated Energy Due to the Interference of Quantum States	64
3.10 Some Results from the Formalism of Irreducible Tensor Operators	80
3.11 Radiation Polarization in the Statistical Tensor Formalism. Comparison of the Conclusions of Quantum Mechanical and Classical Approaches	87
3.12 Biaxial Alignment	91
3.13 Level Anti-crossings	94

3.14	Interference Phenomena in Magnetic Resonance	100
3.15	Application of Interference Signals	106
4.	Experimental Observation of Interference Signals	108
4.1	Basic Experimental Scheme	108
4.2	Ensembles of Particles	108
4.3	Techniques for Inducing Coherence	109
4.4	Observation of Interference Phenomena	112
4.5	Hanle Effect in Atoms in the Ground State	113
4.6	Manifestation of the Interference of States in Collisions	119
4.7	Quantum Beats upon Pulse Excitation	121
4.8	Coherent Resonances	126
4.9	Other Resonances	130
4.10	Self-Alignment of Atomic States in a Plasma	133
4.11	Hidden Alignment	139
4.12	Self-Orientation	142
4.13	Interference of Atomic States in Astrophysics	145
4.14	Cascaded Transitions	148
4.15	Diffusion of Radiation	156
4.16	Influence of the Laboratory Magnetic Field on the Hanle Signal Shape. False Hanle Signals	163
4.17	Spectral Content of the Exciting Light and Absorption Line Profile	168
4.18	Faraday Rotation	170
4.19	Hanle Effect Due to Excitation That Is Random with Time	172
4.20	Polarization of Atomic Fluorescence in a Flame	173
4.21	Detection of the Polarization Moments by Radioactivity	174
4.22	Use of the Polarization Moments for Improving the Accuracy of Nonlinear Spectroscopic Techniques	176
4.23	Conclusion	179
5.	Calculation of Interference Signals	180
5.1	An Atom in a Magnetic Field	180
5.2	The Hyperfine Structure	183
5.3	The Magnetic Dipole Interaction Constant	186
5.4	Quadrupole Interaction Between a Nucleus and an Electron Shell	189
5.5	Transition Matrix Elements of the Electric Dipole Moment	195
5.6	Eigenpolarizations of Transitions	202
5.7	Matrix Elements of the Dipole Transition Between States with Hyperfine Structure	204
5.8	The Stark Effect	208
5.9	Atoms with Nonzero Nuclear Spin in External Fields	214
5.10	Perturbation Operators and Their Matrix Elements	215
5.11	The Zeeman Effect in Atoms with Hyperfine Structure	217

	Contents	IX
5.12 The Paschen–Back Effect		221
5.13 Hyperfine Splitting in a Weak Magnetic Field		222
5.14 The Stark Effect in Atoms with Hyperfine Structure in a Weak Electric Field		223
5.15 The Stark Effect in Atoms with Hyperfine Structure in Intermediate Fields		225
5.16 Splitting of Atomic Levels with Hyperfine Structure in a Strong Electric Field		227
5.17 Behaviour of Atoms in Combined Fields		229
