1	The Analysis of Dense Matter	1
	References	11
2	The Physics of Complex Systems	13
2.1	Critical Behavior in Thermodynamics	13
2.2	Cluster Formation and Percolation	20
2.3	Conclusions	26
	References	26
3	The Limits of Hadron Physics	29
3.1	Introduction	29
3.2	The Hadronic Size	30
3.3	The Hadronic Resonance Spectrum	31
3.3.1	Partitioning Integers	32
3.3.2	The Statistical Bootstrap Model	34
3.3.3	The Dual Resonance Model	35
3.4	The Ideal Resonance Gas	36
3.5	The Speed of Sound in a Resonance Gas	40
3.6	Conclusions	41
	Appendix The Critical Structure of the Hagedorn Gas	42
	References	42
4	From Hadrons to Quarks	45
4.1	Cluster Formation in Strongly Interacting Matter	45
4.2	Ideal Quark-Gluon Plasma and Ideal Hadron Gas	47
4.3	Confinement and Bag Pressure	52
4.4	Nucleon Repulsion and Excluded Volume	56
4.5	Strings and Flip-Flop	59
4.6	Conclusions	61
	Appendix Bose and Fermi Gas Partition Functions	62
	References	63

5	Statistical QCD	65
5.1	The Gauge Field Theory of Strong Interactions	65
5.2	Lattice QCD at Finite Temperature	68
5.3	Lattice QCD at Finite Baryon Number Density	74
5.4	The Computer Simulation of Gauge Field Thermodynamics	75
5.5	The Deconfinement of Quarks and Gluons	79
5.5.1	SU(3) Gauge Theory	79
5.5.2	Full QCD	83
5.6	Conclusions	87
	References	87
6	Broken Symmetries	89
6.1	Symmetry Breaking and Critical Behavior	89
6.2	The Deconfinement Transition	91
6.3	Chiral Symmetry Restoration	94
6.4	Quark Mass and Transition Structure	100
6.5	Deconfinement and Chiral Symmetry Restoration	102
6.6	Does Chiral Symmetry Restoration Drive Deconfinement?	106
6.7	Percolation and Rapid Cross-over	108
6.8	Conclusions	109
	References	110
7	The QCD Phase Diagram	111
7.1	States of Matter in QCD: A Second Look	111
7.2	Interaction Regimes of Hadronic Matter	113
7.3	Constituent Quarks and Constituent Quark Plasma	117
7.4	The Nambu–Jona-Lasinio Model	124
7.5	QCD at Finite Baryon Density	129
7.6	Conclusions	133
	References	134
8	The Quark-Gluon Plasma	137
8.1	Introduction	137
8.2	Color Charge Screening and String Breaking	138
8.3	Interaction Regimes of the Plasma	143
8.4	Weak Coupling Approaches	146
8.5	Bag Pressure and Gluon Condensate	149
8.6	The Quasi-particle Approach	150
8.7	The Speed of Sound in the QGP	154
	References	155
9	The Little Bang	157
9.1	Applying Strong Interaction Thermodynamics	157
9.2	High Energy Collisions and the Vapor Trail	158
9.3	Parton Interactions and Thermalization	161
9.4	Parton Percolation and Saturation	166
9.5	Color Glass Condensate and Glasma	167
	References	169

10 Probing the Quark-Gluon Plasma 171
10.1 Tools to Probe 171
10.2 Hadronic Radiation and Source Size 173
10.3 Electromagnetic Radiation 175
10.4 Quarkonium Dissociation 177
10.5 Jet Quenching 186
10.6 The Corona Effect 191
References 192

11 The Fireball Paradigm 195
11.1 Statistical Multihadron Production 195
11.2 The Abundance of the Species 199
11.3 The Hadronic Resonance Gas and Its Limits 204
11.4 Dynamical Effects 205
11.5 Conclusions 208
Appendix 11.A Scattering Matrix and Phase Space 208
Appendix 11.B Exact Charge Conservation 210
References 212

12 The Event Horizon of Confinement 215
12.1 Black Holes and Event Horizons 215
12.2 Accelerated Frames and Unruh Radiation 217
12.3 Pair Production in e^+e^- Annihilation 220
12.4 Hadronic Collisions 227
12.5 Strange Particle Production 228
12.6 Stochastic Thermalization 229
12.7 Conclusions 230
References 231

13 Outlook 233
