

Contents

Chapter 1

Cell Volume Regulatory Mechanisms – An Overview	
<i>F. Lang, M. Ritter, H. Völkl, and D. Häussinger</i>	1
1 Introduction	2
2 Mechanisms of Regulatory Cell Volume Decrease (RVD)	3
3 Mechanisms of Regulatory Cell Volume Increase (RVI)	12
4 Factors Activating or Modifying Cell Volume Regulatory Mechanisms	15
5 Conclusions	19
References	20

Chapter 2

Cell Volume and Hepatic Metabolism	
<i>D. Häussinger, W. Gerok, and F. Lang</i>	33
1 Introduction	33
2 Cell Volume Control in Liver	34
3 Modulation of Hepatic Metabolism by Cell Volume	41
4 Cell Volume and Bile Formation	50
5 Role of Cell Volume in Hormone Action	53
6 Signalling Systems	58
7 Perspective	60
References	60

Chapter 3

Volume Regulation in Transporting Epithelia	
<i>J. Graf, W.B. Guggino, and K. Turnheim</i>	67
1 Introduction	68
2 Mechanisms of Epithelial Cell Volume Regulation	69
3 Intestinal Transport and Volume Regulation	83

4 Control of Renal Cell Volume: The Renal Medulla Role of Organic Solutes in Cell Volume Regulation	90
5 Regulation of Liver Cell Volume	98
6 Conclusion	103
References	104

Chapter 4

Cell Volume and Stimulus-Secretion Coupling

<i>A. Kurtz and H. Scholz</i>	119
1 General Aspects of Secretion	119
2 Fluid Secretion in Exocrine Acinar Cells	121
3 Volume Changes During Exocrine Secretion	123
4 Volume Counterregulatory Mechanisms During Exocrine Secretion	125
5 Volume Changes During Endocrine Secretion	127
6 Possible Regulatory Role of the Cell Volume for Renin Secretion	129
7 Summary	133
References	133

Chapter 5

Cell Volume Regulation and Vascular Endothelial Function

<i>W. C. O'Neill</i>	139
1 Introduction	139
2 Regulatory Volume Decrease in Endothelium	140
3 Regulatory Volume Increase	144
4 Cell Volume Regulation and Endothelial Function	150
References	154

Chapter 6

Effects of Swelling on Glial Cell Function

<i>H. K. Kimelberg, E. R. O'Connor, and H. Kettenmann</i>	157
1 Astroglial Swelling in Situ – Contribution to Pathology	157
2 Methods for Studying Glial Swelling	158
3 Mechanisms of Astrocytic Swelling	163
4 Functional Consequences of Glial Swelling	169
5 Conclusions	179
References	180

Chapter 7

Cell Volume Regulation: Intracellular Transmission

E. K. Hoffmann, L. O. Simonsen, and I. H. Lambert 187

1 Introduction	187
2 Principal Ion Transport Systems for Na ⁺ , K ⁺ and Cl ⁻ Involved in Cell Volume Regulation	190
3 Activation Mechanisms for RVD	204
4 Activation Mechanism for RVI	229
5 Induction of Organic Osmolyte Transport Systems	231
6 Biological Role of Volume Regulation	233
References	237

Chapter 8

Regulation of Volume-Modulating Ion Transport Systems by Growth Promoters

L. Bianchini and S. Grinstein 249

1 Introduction	249
2 Effect of Growth Promoters on Na ⁺ /H ⁺ Exchange	251
3 Effect of Growth Promoters on Na/K/Cl Cotransport	262
4 Concluding Remarks	270
References	270

Chapter 9

The Regulation of Organelle Function Through Changes in Their Volume

A. P. Halestrap 279

1 Introduction	280
2 The Regulation of Mitochondrial Volume	280
3 Changes in the Mitochondrial Matrix Volume as a Mechanism of Hormone Signal Transduction Across the Liver Mitochondrial Membrane	291
4 Regulation of Mitochondrial Volume in Other Tissues	298
5 Swelling of Mitochondria Occurs in Pathological States	299
References	301

Subject Index 309

Cell Volume Regulatory Mechanisms – An Overview

F. Lang^{1,2}, *M. Ritter*¹, *H. Völkl*¹, and *D. Häussinger*³

Contents

1	Introduction	2
2	Mechanisms of Regulatory Cell Volume Decrease	3
2.1	Ion Channels	3
2.2	KCl Symport	8
2.3	K ⁺ /H ⁺ Exchange	10
2.4	Na ⁺ /Ca ²⁺ Exchange	10
2.5	Na ⁺ /K ⁺ ATPase	10
2.6	Transport of Nonelectrolytes	11
2.7	Metabolism	11
2.8	Other Mechanisms	11
3	Mechanisms of Regulatory Cell Volume Increase	12
3.1	Ion Channels	12
3.2	Na ⁺ /H ⁺ Exchange	13
3.3	Na ⁺ , K ⁺ , 2Cl ⁻ Cotransport	13
3.4	Other Transport Systems	14
3.5	Metabolism	14
4	Factors Activating or Modifying Cell Volume Regulatory Mechanisms	15
4.1	Extracellular Osmolarity	15
4.2	Extracellular Ion Composition	15
4.3	Transport Across the Cell Membrane	16
4.4	Metabolism	17
4.5	Hormones	18
4.6	Ras Oncogene	18
5	Conclusions	19
	References	20

Cell Volume and Hepatic Metabolism

D. Häussinger¹, W. Gerok¹, and F. Lang²

Contents

1	Introduction	33
2	Cell Volume Control in Liver	34
2.1	Anisoosmotic Cell Volume Modulation	34
2.2	Cumulative Substrate Transport	35
2.3	Cell Volume Control by Hormones	38
3	Modulation of Hepatic Metabolism by Cell Volume	41
3.1	Cell Volume, Amino Acid and Ammonia Metabolism	43
3.2	Cell Volume and Protein Turnover	45
3.2.1	Proteolysis	45
3.2.2	Protein Synthesis	46
3.3	Cell Volume and Carbohydrate Metabolism	48
3.4	Cell Volume and Ketogenesis	49
3.5	Cell Volume and Lipogenesis	49
4	Cell Volume and Bile Formation	50
4.1	Bile Acid-Dependent Bile Flow	50
4.2	Bile Acid-Independent Bile Flow	52
5	Role of Cell Volume in Hormone Action	53
5.1	Hormonal Control of Protein Turnover	53
5.2	Other Hormone Effects	54
5.3	Relation to Intracellular Hormone Signalling	57
6	Signalling Systems	58
7	Perspective	60
	References	60

Volume Regulation in Transporting Epithelia

*J. Graf*¹, *W.B. Guggino*², and *K. Turnheim*³

Contents

1	Introduction	68
2	Mechanisms of Epithelial Cell Volume Regulation	69
2.1	The Steady State Cell Volume	69
2.2	General Principles and Energetic Aspects of Epithelial Electrolyte Transport	69
2.3	The Polar Distribution of Membrane Ion Transport Systems in Absorbing and Secreting Epithelial Cells	73
2.4	Factors that Cause Epithelial Cell Swelling or Cell Shrinkage	75
2.4.1	Isotonic Cell Swelling	75
2.4.2	Isotonic Cell Shrinkage	76
2.5	Mechanisms of Electrolyte Transport in Regulatory Cell Volume Decrease (RVD)	78
2.6	Mechanisms of Electrolyte Transport in Regulatory Volume Increase (RVI)	80
2.7	Volume Sensing and Signal Transduction Mechanisms in Transporting Epithelia	81
3	Intestinal Transport and Volume Regulation	83
3.1	Introduction	83
3.2	Regulation of Apical Na ⁺ Entry by Intracellular Na ⁺	84
3.3	Na ⁺ /K ⁺ ATPase Activity and Na ⁺ Transport	85
3.4	Relation Between Basolateral K ⁺ Conductance and Na ⁺ Transport	87
3.5	Volume Regulation and Transport	89
4	Control of Renal Cell Volume: The Renal Medulla of Organic Solutes in Cell Volume Regulation	90
4.1	Introduction	90
4.2	Control of Cell Volume in the Renal Medulla	91
4.3	Coping with a High Extracellular Osmolality	92
4.4	The Response to Diuresis	93
4.5	The Response to Antidiuresis	96
4.6	Integrated Response	98
5	Regulation of Liver Cell Volume	98
5.1	Epithelial Transport in Liver	99

Effects of Swelling on Glial Cell Function

H.K. Kimelberg^{1,2}, E.R. O'Connor², and Helmut Kettenmann³

Contents

1	Astroglial Swelling in Situ	157
2	Methods for Studying Glial Swelling	158
2.1	Methods for Measuring Cell Volume in Cultures	158
2.2	In Vivo Measurements	161
3	Mechanisms of Astrocytic Swelling	163
3.1	Uptake of Extracellular K ⁺	163
3.2	Glial Swelling Associated with Acid-Base Changes	165
3.3	Astroglial Swelling Caused by Glutamate and Other Excitatory Amino Acids ..	166
3.4	Swelling Due to Fatty Acids and Free Radicals	167
3.5	Swelling in Hepatic Encephalopathy and Reye's Syndrome	167
3.6	Swelling in Experimental Allergic Encephalomyelitis (EAE)	168
3.7	Hypotonic Medium-Induced Swelling	168
4	Functional Consequences of Glial Swelling	169
4.1	Swelling and Ion Channels	169
4.1.1	Glial Cells Express Channels Specific for K ⁺ and Cl ⁻	169
4.1.2	Large Conductance Anion Channel	170
4.1.3	The Cl ⁻ Gradient Determines the Direction of KCl Flux	170
4.1.4	Rapid K ⁺ Movements in Situ	173
4.1.5	Stretch-Sensitive Channels	173
4.2	Release of Amino Acids During Swelling	175
4.3	Role of Calcium in Volume Regulation	178
5	Conclusions	179

Cell Volume Regulation: Intracellular Transmission

E.K. Hoffmann¹, L.O. Simonsen², and I.H. Lambert¹

Contents

1	Introduction	187
2	Principal Ion Transport Systems for Na ⁺ , K ⁺ , and Cl ⁻ Involved in Cell Volume Regulation	190
2.1	K ⁺ and Cl ⁻ Conductive Pathways Involved in Regulatory Volume Decrease (RVD)	196
2.1.1	Properties of the Volume-Activated K ⁺ Channel	197
2.1.2	Properties of the Volume-Activated Cl ⁻ Channel	200
2.2	Na ⁺ , K ⁺ , 2Cl ⁻ Cotransport and/or Na ⁺ , Cl ⁻ Cotransport Involved in Regulatory Volume Increase (RVI)	202
2.2.1	Ehrlich Ascites Tumour Cells	202
3	Activation Mechanisms for RVD	204
3.1	The Cytoskeleton	204
3.2	Stretch-Activated (SA) Channels	206
3.3	Ca/Calmodulin	210
3.4	Agonist-Induced Activation of K ⁺ and Cl ⁻ Channels in Ehrlich Ascites Tumour Cells	216
3.5	Inositol Phosphate Cycle	219
3.6	Eicosanoids	220
3.6.1	Role in RVD	221
3.6.2	Role in Activation of Taurine Leak Pathway	223
3.6.3	Effect of Polyunsaturated Fatty Acids	225
3.7	Model for Intracellular Transmission	228
4	Activation Mechanism for RVI	229
5	Induction of Organic Osmolyte Transport Systems	231
6	Biological Role of Volume Regulation	233
6.1	Secreting Epithelia	233

Regulation of Volume-Modulating Ion Transport Systems by Growth Promoters

*L. Bianchini*¹ and *S. Grinstein*^{1,2}

Contents

1	Introduction	249
2	Effect of Growth Promoters on Na ⁺ /H ⁺ Exchange	251
2.1	Characteristics of the Na ⁺ /H ⁺ Antiport	251
2.2	Molecular Identification of the Mammalian Na ⁺ /H ⁺ Antiport	253
2.3	Modulation of Na ⁺ /H ⁺ Antiport by Growth Promoters	254
2.3.1	Activation of Na ⁺ /H ⁺ Antiport by Growth Promoters	254
2.3.2	Mitogen-Induced Activation of Na ⁺ /H ⁺ Exchange and pH _i Changes	259
2.4	Na ⁺ /H ⁺ Exchange and Growth Promoter-Induced Changes in Cell Volume	261
3	Effect of Growth Promoters on Na/K/Cl Cotransport	262
3.1	Properties of the Na/K/Cl Cotransport System	262
3.1.1	Molecular Identification of the Na/K/Cl Cotransporter	263
3.2	Regulation of Na/K/Cl Cotransport by Growth Promoters	263
3.2.1	Activation of Na/K/Cl Cotransport by Growth Promoters	263
3.2.2	Role of Na/K/Cl Cotransport in Mitogenic Signal Transduction	268
4	Concluding Remarks	270

The Regulation of Organelle Function Through Changes in Their Volume

A.P. Halestrap¹

Contents

1	Introduction	280
2	The Regulation of Mitochondrial Volume	280
2.1	Mitochondria Are Perfect Osmometers	280
2.2	Mitochondrial Volume Is Regulated by Movement of K ⁺ Across the Inner Mitochondrial Membrane	281
2.3	Hormones Increase the Mitochondrial Volume in Hepatocytes	283
2.4	The Role of Ca ²⁺ in the Hormonal Regulation of Mitochondrial Volume	284
2.5	An Increase in Matrix Pyrophosphate Concentration May Mediate the Ca ²⁺ -Induced Increase in Matrix Volume	286
2.6	The Mechanism by Which Ca ²⁺ Regulates Mitochondrial [PPi]	287
2.7	The Mechanism by Which PPi Increases the Mitochondrial Volume	289
3	Changes in the Mitochondrial Matrix Volume as a Mechanism of Hormone Signal Transduction Across the Liver Mitochondrial Membrane	291
3.1	The Effects of Matrix Volume on Mitochondrial Metabolism	291
3.2	Mechanisms by Which the Matrix Volume Influences Liver Mitochondrial Metabolism	292
3.3	The Importance of Increases in the Mitochondrial Volume for the Hormonal Control of Liver Metabolism	293
3.3.1	Gluconeogenesis	293
3.3.2	Fatty Acid Oxidation	294
3.3.3	Nitrogen Metabolism	294
3.4	Hormonal Activation of Respiration Is Achieved by an Activation of Ca ²⁺ -Sensitive Dehydrogenases and a Volume-Mediated Stimulation of the Respiratory Chain	295
3.5	Changes in Hepatocyte Volume May Also Stimulate Mitochondrial Metabolism Through an Increase in the Matrix Volume	297
4	Regulation of the Mitochondrial Volume in Other Tissues	298
4.1	Brown Fat	298
4.2	Secretory Tissues	298
4.3	The Heart	299
5	Swelling of Mitochondria Occurs in Pathological States	299
5.1	The Liver in Disease	299
5.2	Cell Death and Reperfusion Injury – The Opening of a Non-Specific Pore in the Mitochondrial Inner Membrane	300
5.2.1	Pore Opening May Also Have a Physiological Role	301
