

Contents

1 Introduction	1
2 Brightening – a brief history	3
3 Bleaching agents, properties and generation	13
3.1 Oxidizing agents, physical and chemical properties	14
3.1.1 Oxygen	14
3.1.2 Chlorine dioxide	16
3.1.3 Hydrogen peroxide	22
3.1.4 Peracetic acid	27
3.1.5 Ozone	30
3.2 Reducing agents, physical and chemical properties	31
3.2.1 Sodium dithionite	31
3.2.2 Sulfur dioxide	34
3.2.3 Formamidine sulfinic acid (FAS)	35
3.3 Enzymes	36
3.4 Supporting chemicals in bleaching	37
3.4.1 Caustic soda, oxidized white liquor	37
3.4.2 Sodium silicate	39
3.4.3 Sulfuric acid	40
3.4.4 Chelating agents (sequestrants)	41
3.4.5 Magnesium sulfate (Epsom salt)	42
3.5 Risk and safety phrases	42
4 Bleaching of chemical Pulp	45
4.1 Bleaching stages and sequences	45
4.2 Oxygen delignification	53
4.2.1 Process conditions	57
4.2.2 Impact of poor washing	60
4.2.3 Oxygen delignification of hardwood pulp	64
4.2.4 Trouble shooting in oxygen delignification	66
4.3 Hot acid hydrolysis	68
4.4 Chlorine dioxide	73
4.4.1 Chlorine dioxide delignification	73
4.4.2 Chlorine dioxide in bleaching	83
4.4.3 Modified chlorine dioxide delignification of hardwood pulps	92
4.4.4 Generation of halogenated organic compounds (AOX, VOX and OX)	96
4.4.5 Bleach plant control in D stages	107
4.4.6 Trouble shooting in D stages	107
4.5 Alkaline extraction	111

4.5.1	Oxidative reinforced extraction	115
4.5.2	Hydrogen peroxide in extraction	121
4.5.3	Decomposition of hydrogen peroxide in bleaching	129
4.5.4	Other alkali sources in extraction	133
4.5.5	Extraction stage control	137
4.5.6	Trouble shooting in extraction	137
4.6	Hydrogen peroxide bleaching	139
4.6.1	Brown stock addition	139
4.6.2	Brightening of unbleached pulp	139
4.6.3	Second extraction stage peroxide application	141
4.6.4	Final bleaching with peroxide, high density storage bleaching	142
4.6.5	Catalyzed peroxide delignification/bleaching	147
4.6.6	Corrosion of titanium by alkaline peroxide	149
4.6.7	Trouble shooting in P stages	150
4.7	Ozone in pulp delignification	152
4.8	Exotic bleaching chemicals	158
4.8.1	Peracetic acid	158
4.8.2	Peroxymonosulfuric acid (Caro's acid)	161
4.8.3	Enzymes	162
4.8.4	Chlorine	164
4.8.5	Hypochlorite	165
4.8.6	Polyoxometalates	166
4.9	TCF bleaching of pulp	169
4.9.1	TCF bleaching of Kraft pulp	169
4.9.2	ECF "light" bleaching of Kraft pulp	171
4.9.3	TCF bleaching of sulfite pulp	172
4.10	Yield in bleaching	181
4.11	Water consumption, effluent "free" processes	189
5	Stability of brightness	201
5.1	Final bleaching with chlorine dioxide or peroxide	210
5.2	Final bleaching with peracetic acid or ozone	218
5.3	Brightness stability in TCF and ECF "light" bleaching	222
6	Bleaching of mechanical pulp	227
6.1	Reductive bleaching	230
6.1.1	Bleaching with bisulfite	230
6.1.2	Bleaching with dithionite	231
6.2	Metals management, use of chelants (sequestering agents)	232
6.3	Bleaching with hydrogen peroxide	234
6.4	Conventional activation and stabilization	235
6.5	Modified peroxide activation	242
6.6	Technology of mechanical pulp bleaching	252
6.7	Control strategy in bleaching	256
6.8	Trouble shooting in mechanical pulp bleaching	256

7 Brightening of secondary fiber	261
7.1 Recycling of paper and board	261
7.2 Recycling for printing paper	265
7.3 Recycling for production of tissue	272
7.4 Recycling for production of board	273
7.5 Trouble shooting in deinking plants	273
8 General aspects of pulp production	277
8.1 Pulp strength	277
8.2 Wood resources	278
8.3 Emissions to the atmosphere	283
8.4 Emissions to the aquatic environment	285
8.5 Solid waste	288
9 Bleaching of other material	291
10 Outlook	297
10.1 Chemical pulp bleaching	297
10.2 Mechanical pulp bleaching	302
10.3 Wastepaper bleaching	303
10.4 Summary	304
Biographical sketch	307
Subject index	309
