

Table of Contents

1	Introduction	1
2	Classical Ergodic Theory	3
2.1	Irreversibility	3
2.1.1	Coarse-Graining	4
2.1.2	Correlations	10
2.1.3	Abstract Dynamical Systems	14
2.1.4	Spectral Theory	19
2.2	Entropy	22
2.2.1	Randomness and Entropy	22
2.2.2	The Entropy of Kolmogorov and Sinai	26
2.2.3	Kolmogorov Systems	34
2.3	Topological Properties of Dynamical Systems	47
2.3.1	Topological Dynamics	47
2.3.2	Topological Entropy	50
3	Algebraic Approach to Classical Ergodic Theory	53
3.1	Abelian C^* Dynamical Systems	53
3.2	Abelian W^* Dynamical Systems	55
3.3	W^* Algebras: KS-Entropy and K-Systems	59
3.4	C^* Algebras: Classical Topological Entropy	66
4	Infinite Quantum Systems	69
4.1	Useful Tools from Finite Quantum Systems	69
4.1.1	Density Matrices and von Neumann Entropy	69
4.1.2	Relative Entropy and Completely Positive Maps	78
4.2	GNS-Construction	83
4.2.1	Fermions, Bosons and Toy Models	88
4.3	Ergodic Properties in Quantum Systems	106
4.3.1	Galilei-Invariant Two-Body Interactions	122
4.4	Algebraic Quantum Kolmogorov Systems	128

5	Connes-Narnhofer-Thirring Entropy	141
5.1	Basic Ideas and Construction 1	141
5.2	Basic Ideas and Construction 2	153
5.3	CNT-Entropy: Applications	162
5.3.1	Dynamical Entropy of Quasi-Free Automorphisms	169
5.3.2	CNT-Entropy and Thermodynamics	174
5.4	Short History of the Topic and Latest Developments	183
5.5	Entropic Quantum Kolmogorov Systems	187
5.6	Ideas for a Non-commutative Topological Entropy	198
6	Appendix	209
	References	213
	Index of Symbols	221
	Index	223
