Part I General Issues

Chapter 1	An Overview of Expert Systems	3
1.1	Introduction	3
1.2	Foundations of Expert Systems	4
1.3	Expert System Architecture	6
1.4	Knowledge Representation in Expert Systems	6
1.4.1	Rule-Based Systems	7
1.4.2	Frame-Based Systems	8
1.4.3	Associative Networks	9
1.4.4	Logic-Based Systems	10
1.4.5	Object-Oriented Systems	10
1.4.6	Attribute Grammar Systems	11
1.5	Comparison of Knowledge Representation Methods	12
1.6	Knowledge Representation in Engineering-Based Expert Systems	13
1.7	Conclusion	21
1.8	Bibliography	22
Chapter 2	Knowledge Acquisition for Expert System Design	25
2.1	Introduction	25
2.2	Human Experts and Expert Systems	27
2.2.1	Human Experts	27
2.2.2	Expert Systems	27
2.3	The Knowledge Acquisition Problem	29
2.3.1	General Issues	29
2.3.2	The Knowledge Engineer	30
2.4	Knowledge Acquisition Techniques	31
2.4.1	Introductory Aspects	31
2.4.2	The Interview Technique	32
2.4.3	Focused Meetings and Discussions	35
2.4.4	Other Techniques	37
2.5	Application Examples	38
2.5.1	Knowledge Acquisition in Industrial Diagnostic Systems	39
2.5.2	Control Algorithm Acquisition	41

2.5.3	Knowledge Acquisition for a Budgetary Expert System .	45
2.6	Conclusions	49
2.7	Bibliography	50
Chapter 3	Synergy of Expert Systems, CAD, and Logic Programming	52
3.1	Introduction	52
3.1.1	A Circuit Pack Troubleshooting Expert System	53
3.1.2	CAD in Expert Systems	53
3.1.3	AI in CAD	54
3.1.4	Outline	54
3.2	Computers-Aided Design of Circuit Pack Troubleshooting Knowledge Bases	55
3.2.1	Previous Works	55
3.2.2	Graphical Interaction	56
3.2.3	The Graphic Interface	58
3.3	Heuristic Search in the Computer-Aided Design of Diagnostic Expert Systems	63
3.3.1	Previous Works	64
3.3.2	Goal Selection	66
3.4	Reification of Expert Systems	72
3.4.1	Automated Programming Systems	74
3.4.2	Reifying = Instantiation + Inference + Translation	74
3.4.3	ESR Architecture	76
3.4.4	Parse Tree	82
3.5	Summary	83
3.6	Bibliography	85

Part II Expert Systems in Engineering Domains

Chapter 4	Expert Systems for Automatic Hardware Synthesis	91
4.1	Introduction	91
4.2	Selected Expert Systems	91
4.3	A Prototype Expert System	96
4.3.1	The Knowledge Base (KB)	98
4.3.2	Implementation	104
4.3.3	Results	106
4.4	Extensions	107
4.4.1	AST to IEI Translator	110
4.4.2	The Knowledge Base	110
4.4.3	The Inference Engine	114
4.5	Summary	115
4.6	Bibliography	116
4.7	Appendix	117

Chapter 5	Expert System of Image Processing and its Application to LANDSAT Image Analysis	120
5.1	Introduction	120
5.2	Knowledge for Image Processing Expert Systems	121
5.3	Overview of ELIA	123
5.3.1	Features of LANDSAT TM Images	123
5.3.2	Configuration of ELIA	125
5.4	Expert System Modules	127
5.4.1	Initial Segmentation	127
5.4.2	Extraction of Waters	128
5.4.3	Road Extraction	131
5.5	Description of Analyzed Data	135
5.5.1	Basic Concept	135
5.5.2	Graph Modification Rules	135
5.6	Experimental Result	138
5.7	Concluding Remarks	139
5.8	Bibliography	141
Chapter 6	Self-Learning Expert System for Computer Communication Design	143
6.1	Introduction	143
6.2	Notations and Definitions	143
6.2.1	A Graph	143
6.2.2	Non-Oriented Graph	144
6.2.3	Degree of a Graph	145
6.2.4	Network	145
6.2.5	Disjoint Paths Between Nodes	145
6.2.6	Connectivity of the Nodes	146
6.3	The Design Problem	146
6.3.1	Formulation of the Problem	146
6.3.2	Nature and Complexity of the Problem	147
6.3.3	Classical Methods of Resolution	147
6.4	Artificial Intelligence Approach	149
6.4.1	The Architecture of an Expert System	149
6.4.2	Knowledge Representation	151
6.4.3	Knowledge Acquisition and Self-Learning Mechanisms	152
6.5	Design of the Problem-Solving System	153
6.5.1	Principles of the Proposed Method	153
6.5.2	General Organization of the Proposed System	154
6.5.3	Feasibility and Goodness of Solutions	158
6.6	Bibliography	159
Chapter 7	Application of Artificial Intelligence and Expert Systems in Power Engineering	160
7.1	Introduction	160
7.2	Fault Diagnosis	161

7.2.1	High-Voltage Network Systems	161
7.2.2	Distribution Network Systems	163
7.2.3	Turbine Generators	164
7.3	Power System Control	164
7.3.1	Reactive Power and Voltage Control	164
7.3.2	Blackout Restoration	165
7.3.3	Determination of Load Block Composition in Under-Frequency Load-Shedding Schemes	167
7.3.4	Generator Scheduling	167
7.4	Load and Circuit Allocations	169
7.4.1	Load Allocation in Distribution Substations	169
7.4.2	Circuit Allocation in Subtransmission Switching Substations	169
7.5	Power System Planning	170
7.5.1	Load Flow Planning	170
7.5.2	Generation Expansion Planning	171
7.5.3	Distribution Expansion Planning	171
7.6	Summary and Conclusions	172
7.6.1	Summary of Work to Date	172
7.6.2	Current and Future Trends	173
7.6.3	Future Research and Development Themes	176
7.7	Bibliography	177
Chapter 8	A Knowledge-Based Approach to Verification and Improvement of Industrial Plan Layout Design	179
8.1	Introduction	179
8.2	Verification Method	180
8.2.1	Problem Definition	180
8.2.2	Configuration of Method	180
8.3	Improvement Method	182
8.3.1	Problem Definition	182
8.3.2	Configuration of Method	182
8.3.3	Optimal Placement	187
8.4	Results and Evaluations	187
8.5	Conclusions	188
8.6	Bibliography	189
Part III	Expert Systems in Fault Diagnosis and Process Control	
Chapter 9	EXACT – an Expert System for Automobile Air-Conditioner Compressor Troubleshooting	193
9.1	Introduction	193
9.2	Expert Systems for Troubleshooting	194
9.3	System Development	196
9.3.1	Development of the Knowledge Base	196

9.3.2	Development of the Data Base	198
9.3.3	Development of the Inference Engine	198
9.3.4	Development of the Explanation Module	200
9.4	System Configuration	201
9.5	System Performance Validation	203
9.5.1	Validation Procedure	203
9.5.2	Performance Validation Results	204
9.6	Conclusion	206
9.7	Bibliography	206
9.8	Appendix: An Example of Case Study of EXACT	207
Chapter 10	Using Prototypical Knowledge in Classification-Based Expert Systems	209
10.1	Introduction	209
10.2	Vibration-Based Monitoring	209
10.3	Overview of DIVA	211
10.3.1	The Situation Recognition Task	212
10.3.2	The Diagnosis Task	212
10.3.3	The Information Retrieval and Data Abstraction Task .	212
10.4	Recognition of Typical Situations	215
10.4.1	Description of a Prototype	215
10.4.2	Establish/Refine	216
10.5	Discussion of the Prototype Model	217
10.5.1	Context-Dependent Reasoning	217
10.5.2	System Reliability	217
10.5.3	Knowledge Acquisition	218
10.6	Conclusion	219
10.7	Bibliography	220
Chapter 11	Combined Control and Diagnosis for Complex Processes: An Intelligent Control Approach	222
11.1	Introduction	222
11.2	Intelligent Control of Complex Processes	224
11.2.1	The Challenge	224
11.2.2	Integrating Control and Diagnosis	225
11.2.3	The Shallow Knowledge Approach: Structure and a Prototype	227
11.2.4	Towards Deep Knowledge: Qualitative Simulation	228
11.2.5	The Semantic Control Approach	230
11.3	An Implementation	231
11.3.1	Program Structure	231
11.3.2	Programming the Finite Automaton in Logic	234
11.3.3	Object-oriented Implementation of the Forward Chainer	235
11.4	Discussion	237
11.5	Bibliography	238

Chapter 12	Knowledge-Based Adaptive Identification for Process Control and Modelling	240
12.1	Introduction	240
12.2	Quantitative Identification	241
12.3	Intelligent Adaptive Identification	243
12.3.1	Qualitative Identification	243
12.3.2	Intelligent Adaptive Identification	245
12.4	Implementation and Discussion	247
12.5	On-Going Study and Conclusion	252
12.5.1	Real Time Intelligent Control	252
12.5.2	Large-Scale Integrated Intelligent Control	253
12.6	Bibliography	254
Part IV	Expert Systems in Robotics and Manufacturing	
Chapter 13	Knowledge Based (Expert) Systems for Intelligent Control Applications	259
13.1	Introduction	259
13.2	Knowledge Representation Techniques	260
13.3	Expert Systems in Intelligent Robotics	261
13.4	Expert Systems in Control	263
13.5	Conclusion	266
13.6	Bibliography	266
Chapter 14	Learning Expert System for Robot Skills	269
14.1	Introduction	269
14.2	EARSA: A Paradigm for Robot Skill Acquisition	272
14.3	Robot Fine Motion Skills	274
14.4	Skill Transfer	274
14.4.1	Encoding of Expert Skills	274
14.4.2	Representation of Robot Skills	275
14.4.3	Interpretation and Operationalization	277
14.5	Robot Self-Learning of Fine Motion Skills	278
14.5.1	Critic and Sample Collection	279
14.5.2	Hypothesis Generation	280
14.5.3	Hypothesis and Rule Monitoring	283
14.6	Simulation	285
14.6.1	Model	285
14.6.2	Test Results	286
14.7	Conclusion	289
14.8	Bibliography	289
Chapter 15	A Knowledge-Based Mechanical Assembly Planning System	291
15.1	Introduction	291
15.2	Planning and Mechanical Assembly	291

	Contents	XV
15.3	System Overview	293
15.4	Knowledge Base	294
15.4.1	Workpiece Structures	294
15.4.2	Assembly Principles	297
15.4.3	Assembly Operations	298
15.5	Control Structure	300
15.5.1	Structure Analysis	300
15.5.2	Plan Generation	302
15.6	Conclusion	305
15.7	Bibliography	306
Chapter 16	Expert Systems in Manufacturing	307
16.1	Introduction	307
16.2	The Importance of Topology	307
16.3	Representation of Shape	308
16.4	Language	308
16.5	Form Features	309
16.6	Extraction of Form Features	309
16.7	Design for Quality	310
16.8	Integration of Structure and Robot	312
16.9	Summary	314
16.10	Bibliography	314
Chapter 17	Artificial Intelligence Concepts and Petri Nets for Modelling Simulation and Control of Flexible Manufacturing Systems	315
17.1	Introduction	315
17.2	Part I: Petri Net in Manufacturing	315
17.2.1	Illustrative Example: A Flexible Manufacturing System	315
17.2.2	Ordinary Petri Nets (PN)	316
17.2.3	Structured Petri Nets (SP-N)	317
17.2.4	Petri Net Control Model of the Illustrative Example	320
17.2.5	Conclusion Part I	321
17.3	Part II: A.I. Approach: The Need to Obtain an Efficient Description of the Control Model at High Level of Decision and to Describe the Correct Behaviour of the Process	321
17.3.1	A.I. Modelling of the High Level of Control	323
17.3.2	Object-Oriented Description of the Process Model	327
17.4	Bibliography	333
Chapter 18	Expert Control Architectures for Production Planning and Control	335
18.1	Introduction	335
18.2	The PP-Problem Statement	337
18.3	The PP-Problem Complexity	340

18.4	The APP-Problem Solution	343
18.4.1	Decomposing the APP-Problem	343
18.4.2	Developing the APP-Strategy	344
18.4.3	Organizing the Hybrid PP-Architecture	344
18.5	Discussing a Simple Example	347
18.6	Analyzing the HPP-Architecture Generality	348
18.7	Bibliography	350
Chapter 19	Distributed Intelligent Control Systems for an Unmanned Manufacturing Cell	352
19.1	Introduction	352
19.2	Control Algorithm	353
19.2.1	States of Control Algorithm	354
19.2.2	State of Robot	358
19.3	The Intelligent Control System	359
19.3.1	System Components	360
19.3.2	Production Rules	361
19.3.3	Simulation	362
19.4	Conclusion	363
19.5	Bibliography	363
Part V	Expert Systems Catalogues	
Chapter 20	A Survey of Expert System Tools and Engineering- Based Expert Systems	367
20.1	Introduction	367
20.2	An Overview of Expert System Development Tools	367
20.2.1	General Purpose Programming Languages	368
20.2.2	Expert System Shells	368
20.2.3	Expert System Languages	368
20.2.4	Multiple Paradigm Programming Environments	369
20.2.5	Skeletal Systems	369
20.2.6	Additional Modules	369
20.2.7	A Survey of Expert System Development Tools	369
20.3	A Survey on Engineering-Based Expert Systems	373
20.4	Conclusions	376
20.5	Bibliography	377
Index	379
