

CONTENTS

Chapter I Simplicial sets	1
1. Basic definitions	3
2. Realization	7
3. Kan complexes	9
4. Anodyne extensions	14
5. Function complexes	20
6. Simplicial homotopy	23
7. Simplicial homotopy groups	25
8. Fundamental groupoid	36
9. Categories of fibrant objects	40
10. Minimal fibrations	47
11. The closed model structure	59
Chapter II Model Categories	65
1. Homotopical algebra	66
2. Simplicial categories	81
3. Simplicial model categories	89
4. The existence of simplicial model category structures	97
5. Examples of simplicial model categories	101
6. A generalization of Theorem 4.1	109
7. Quillen's total derived functor theorem	115
8. Homotopy cartesian diagrams	121
Chapter III Classical results and constructions	139
1. The fundamental groupoid, revisited	140
2. Simplicial abelian groups	145
3. The Hurewicz map	165
4. The Ex^∞ functor	182
5. The Kan suspension	189
Chapter IV Bisimplicial sets	195
1. Bisimplicial sets: first properties	196
2. Bisimplicial abelian groups	200
2.1. The translation object	201
2.2. The generalized Eilenberg-Zilber theorem	204
3. Closed model structures for bisimplicial sets	211
3.1. The Bousfield-Kan structure	212
3.2. The Reedy structure	212
3.3. The Moerdijk structure	220

4. The Bousfield-Friedlander theorem	223
5. Theorem B and group completion	233
5.1. The Serre spectral sequence	234
5.2. Theorem B	237
5.3. The group completion theorem	242
Chapter V Simplicial groups	251
1. Skeleta	252
2. Principal fibrations I: simplicial G -spaces	260
3. Principal fibrations II: classifications	265
4. Universal cocycles and $\overline{W}G$	269
5. The loop group construction	275
6. Reduced simplicial sets, Milnor's FK -construction	285
7. Simplicial groupoids	295
Chapter VI The homotopy theory of towers	307
1. A model category structure for towers of spaces	309
2. The spectral sequence of a tower of fibrations	315
3. Postnikov towers	326
4. Local coefficients and equivariant cohomology	329
5. On k -invariants	342
6. Nilpotent spaces	350
Chapter VII Reedy model categories	353
1. Decomposition of simplicial objects	353
2. Reedy model category structures	364
3. Geometric realization	373
4. Cosimplicial spaces	376
Chapter VIII Cosimplicial spaces: applications	389
1. The homotopy spectral sequence of a cosimplicial space	390
2. Homotopy inverse limits	400
3. Completions	412
4. Obstruction theory	417
Chapter IX Simplicial functors and homotopy coherence	431
1. Simplicial functors	431
2. The Dwyer-Kan theorem	437
3. Homotopy coherence	449
3.1. Classical homotopy coherence	449
3.2. Homotopy coherence: an expanded version	451
3.3. Lax functors	454
3.4. The Grothendieck construction	455
4. Realization theorems	457

Chapter X Localization	463
1. Localization with respect to a map	464
2. The closed model category structure	478
3. Bousfield localization	489
4. A model for the stable homotopy category	492
