Introduction XXV

Part I Basic Principles and Applications of Photopolymerization Reactions 1

1 Photopolymerization and Photo-Cross-Linking 3
References 6

2 Light Sources 11

- 2.1 Electromagnetic Radiation 11
- 2.2 Characteristics of a Light Source 12
- 2.3 Conventional and Unconventional Light Sources 13
- 2.3.1 Xenon Lamp 13
- 2.3.2 Mercury Arc Lamp 14
- 2.3.3 Doped Lamps 14
- 2.3.4 Microwave Lamps 14
- 2.3.5 Excimer Lamps 14
- 2.3.6 Light-Emitting Diodes (LEDs) 16
- 2.3.7 Pulsed Light Sources 17
- 2.3.8 Laser Sources 17
- 2.3.9 Sun 18
- 2.3.10 Household Lamps 18
- 2.3.11 UV Plasma Source 19
- References 20

3 Experimental Devices and Examples of Applications 21

- 3.1 UV Curing Area: Coatings, Inks, Varnishes, Paints, and Adhesives 21
- 3.1.1 Equipment 21
- 3.1.2 End Uses 21

3.1.3	Coating Properties	24
3.2	Conventional Printing Plates	25
3.3	Manufacture of Objects and Composites	25
3.4	Stereolithography	25
3.5	Applications in Microelectronics	26
3.6	Laser Direct Imaging	26
3.7	Computer-to-Plate Technology	27
3.8	Holography	27
3.9	Optics	28
3.10	Medical Applications	28
3.11	Fabrication of Nano-Objects through a Two-Photon Absorption Polymerization	29
3.12	Photopolymerization Using Near-Field Optical Techniques	29
3.13	Search for New Properties and New End Uses	30
3.14	Photopolymerization and Nanotechnology	32
3.15	Search for a Green Chemistry	33
	References	34
4	Photopolymerization Reactions	41
4.1	Encountered Reactions, Media, and Experimental Conditions	41
4.2	Typical Characteristics of Selected Photopolymerization Reactions	45
4.2.1	Film Radical Photopolymerization of Acrylates	45
4.2.2	Film Cationic Photopolymerization	48
4.2.3	Thiol-ene Photopolymerization	49
4.2.4	Photopolymerization of Water-Borne Light Curable Systems	52
4.2.5	Photopolymerization of Powder Formulations	52
4.2.6	Charge-Transfer Photopolymerization	53
4.2.7	Dual Cure Photopolymerization	54
4.2.8	Hybrid Cure Photopolymerization	55
4.2.9	Anionic Photopolymerization	55
4.2.10	Metathesis Photopolymerization	56
4.2.11	Controlled Photopolymerization Reactions	56
4.2.11.1	Radical Photopolymerization Reactions	56
4.2.11.2	Cationic Photopolymerization Reactions	58
4.2.11.3	Anionic Photopolymerization Reactions	59
4.2.12	Hybrid Sol–Gel Photopolymerization	59
4.2.13	Photo-Cross-Linking Reactions in the Presence of Photobases or Photoacids	59
4.3	Two-Photon Absorption-Induced Polymerization	60
4.4	Remote Curing: Photopolymerization without Light	60
4.5	Photoactivated Hydrosilylation Reactions	61
	References	61

5	Photosensitive Systems	73
5.1	General Properties	73
5.2	Absorption of Light by a Molecule	74
5.2.1	Absorption	74
5.2.2	Molecular Orbitals and Energy Levels	74
5.2.3	Absorption of Light and Optical Transitions	74
5.2.4	Reciprocity Law	76
5.2.5	Multiphotonic Absorption	77
5.3	Jablonski's Diagram	78
5.4	Kinetics of the Excited State Processes	78
5.5	Photoinitiator and Photosensitizer	80
5.6	Absorption of a Photosensitive System	81
5.7	Initiation Step of a Photoinduced Polymerization	82

Part II Radical Photoinitiating Systems 123

8	One-Component Photoinitiating Systems	127
8.1	Benzoyl-Chromophore-Based Photoinitiators	127
8.1.1	Benzoin Derivatives	129
8.1.2	Benzoin Ether Derivatives	132
8.1.3	Halogenated Ketones	136
8.1.4	Dialkoxyacetophenones and Diphenylacetophenones	136
8.1.5	Morpholino and Amino Ketones	137
8.1.6	Hydroxy Alkyl Acetophenones	137
8.1.7	Ketone Sulfonic Esters	140
8.1.8	Thiobenzoate Derivatives	140
8.1.9	Sulfonyl Ketones	144
8.1.10	Oxysulfonyl Ketones	147
8.1.11	Oxime Esters	148
8.2	Substituted Benzoyl-Chromophore-Based Photoinitiators	148
8.2.1	Benzoin Ether Series	149
8.2.2	Morpholino Ketone and Amino Ketone Series	149
8.2.3	Hydroxy Alkyl Acetophenone Series	151
8.2.3.1	Oil- or Water-Soluble Compounds	151
8.2.3.2	Difunctional Compounds	152
8.2.4	Modified Sulfonyl Ketones	154
8.2.5	Limit of the Substituent Effect	154
8.2.6	Macrophotoinitiators	156
8.2.7	Supported Cleavable Photoinitiators	157
8.3	Hydroxy Alkyl Heterocyclic Ketones	157
8.4	Hydroxy Alkyl Conjugated Ketones	158
8.5	Benzophenone- and Thioxanthone-Moiety-Based Cleavable Systems	158
8.5.1	Benzophenone Phenyl Sulfides	158
8.5.2	Ketosulfoxides	159
8.5.3	Benzophenone Thiobenzoates	159
8.5.4	Benzophenone-Sulfonyl Ketones	159
8.5.5	Halogenated Derivatives	160

8.5.6	Cleavable Benzophenone, Xanthone, and Thioxanthone Derivatives	160
8.6	Benzoyl Phosphine Oxide Derivatives	161
8.6.1	Compounds	161
8.6.2	Excited State Processes	162
8.6.3	Absorption Properties and Photolysis	164
8.6.4	Bis-acyl phosphine oxide/Phenolic Compound Interaction	165
8.7	Phosphine Oxide Derivatives	165
8.8	Trichloromethyl Triazines	165
8.9	Biradical-Generating Ketones	166
8.10	Peroxides	166
8.11	Diketones	167
8.12	Azides and Aromatic Bis-Azides	168
8.13	Azo Derivatives	168
8.14	Disulfide Derivatives	168
8.15	Disilane Derivatives	169
8.16	Diselenide and Diphenylditelluride Derivatives	170
8.17	Digermene and Distannane Derivatives	170
8.18	Carbon–Germanium Cleavable-Bond-Based Derivatives	170
8.19	Carbon–Silicon and Germanium–Silicon Cleavable–Bond-Based Derivatives	172
8.20	Silicon Chemistry and Conventional Cleavable Photoinitiators	172
8.21	Sulfur–Carbon Cleavable-Bond-Based Derivatives	173
8.22	Sulfur–Silicon Cleavable-Bond-Based Derivatives	173
8.23	Peresters	173
8.24	Barton’s Ester Derivatives	174
8.25	Hydroxamic and Thiohydroxamic Acids and Esters	174
8.26	Organoborates	176
8.27	Organometallic Compounds	176
8.27.1	Titanocenes	177
8.27.2	Chromium Complexes	177
8.27.3	Aluminate Complexes	178
8.28	Metal Salts and Metallic Salt Complexes	178
8.29	Metal-Releasing Compound	178
8.30	Cleavable Photoinitiators in Living Polymerization	179
8.30.1	Cleavable C–S- or S–S-Bond-Based Photoiniferters	179
8.30.2	TEMPO-Based Alkoxyamines	182
8.31	Oxyamines	183
8.31.1	Alkoxyamines	183
8.31.2	Silyloxyamines	184
8.32	Cleavable Photoinitiators for Two-Photon Absorption	184
8.33	Nanoparticle-Formation-Mediated Cleavable Photoinitiators	185
8.34	Miscellaneous Systems	185
8.35	Tentatively Explored UV-Light-Cleavable Bonds	185
