VI/4 Astronomy, Astrophysics, and Cosmology
A: Instruments and Methods

1	Astronomical instruments.	1
1.1	Optical telescopes (ROBERTO GILMOZZI, MASSIMO DELLA VALLE)	1
1.1.1	Astronomical telescopes	1
1.1.1.1	Basic semantics	1
1.1.1.2	Telescopes	1
1.1.1.3	Stops and pupils	2
1.1.1.4	Principles of telescope design.	2
1.1.1.4.1	The <i>Newtonian</i> focus	2
1.1.1.4.2	The <i>Cassegrain</i> focus	3
1.1.1.4.3	The <i>Nasmyth</i> focus	4
1.1.1.4.4	The <i>coudé</i> focus	4
1.1.1.4.5	The <i>prime</i> focus	5
1.1.1.4.6	<i>Ritchey-Chretien</i>	5
1.1.1.4.7	<i>Dall-Kirkham</i>	5
1.1.1.4.8	<i>Gregorian Telescope</i>	6
1.1.1.4.9	Off-axis designs	6
1.1.1.4.10	Schmidt telescope	7
1.1.1.5	Optical aberrations	8
1.1.1.6	Seeing	9
1.1.1.7	Magnification power and limiting magnitude of a telescope	9
1.1.1.8	New telescope designs	10
1.1.1.8.1	Construction of mosaic mirrors	10
1.1.1.8.2	Lightened mirrors	11
1.1.1.8.3	Thin mirrors under <i>active optics</i> control	11
1.1.1.8.4	3-mirror telescopes	12
1.1.2	Astronomical charge coupled devices (CCDs).	12
1.1.2.1	CTE (charge transfer efficiency)	13
1.1.2.2	Quantum efficiency.	13
1.1.2.3	Computations of the S/N ratio	15
1.1.2.4	Reduction process of the data.	16
1.1.2.4.1	Flat-Fielding	16
1.1.2.4.2	Deferred charge	17
1.1.2.4.3	Non-linearity	17
1.1.2.4.4	Scattered light	17
1.1.2.4.5	Fringing	17
1.1.2.4.6	Bias	18
1.1.2.4.7	Dark	18
1.1.2.4.8	Data reduction	18
1.1.2.4.9	Dithering.	18
1.1.2.4.10	Stacked frames	18
1.1.2.4.11	Mosaicking	19
1.1.3	Photometry.	19
1.1.3.1	Aperture photometry	19
1.1.3.2	Atmospheric extinction	19

1.1.4	Polarimetry	20
1.1.4.1	Sources of polarization	20
1.1.4.2	Stokes vectors	20
1.1.5	Spectroscopy: Diffraction Gratings and Grisms	21
1.1.5.1	Resolution and dispersion	21
1.1.5.2	Slitless spectrograph	22
1.1.6	Fabry-Perot interferometer and narrow band filters	22
1.1.7	Michelson stellar interferometer	23
1.1.7.1	Intensity interferometer	25
1.1.8	Why is adaptive optics needed?	25
1.1.8.1	Definitions of AO parameters	25
1.1.8.1.1	Fried's radius	25
1.1.8.1.2	Seeing disk	25
1.1.8.1.3	Strehl ratio (S_r)	26
1.1.8.1.4	Wavefront coherence time τ_0	26
1.1.8.1.5	Isoplanatic angle	26
1.1.8.1.6	Signal to noise ratio for AO images	26
1.1.8.2	Working principle of an AO system	27
1.1.8.2.1	Wave-front sensors (Shack-Hartmann)	27
1.1.8.2.2	Deformable mirrors	28
1.1.8.2.3	Multi-conjugate adaptive optics	28
1.1.8.2.4	Laser guide stars	28
1.1.9	References for 1.1	29
1.2	Radio astronomy and instrumentation (RICHARD WIELEBINSKI, BERND KLEIN)	31
1.2.1	Introduction	31
1.2.2	Basics of radio astronomy	31
1.2.2.1	Atmospheric transmission	31
1.2.2.2	Emission mechanisms	32
1.2.2.3	Some basic definitions	32
1.2.2.4	Spectrum	33
1.2.2.5	Polarization	34
1.2.2.6	Faraday rotation	35
1.2.2.7	Dispersion measure	36
1.2.2.8	Zeeman effect	36
1.2.3	Radio telescopes	37
1.2.3.1	General	37
1.2.3.2	Resolving power of single apertures	37
1.2.3.3	Interferometers	37
1.2.3.4	Aperture synthesis	38
1.2.3.5	Low frequency antenna arrays	38
1.2.3.6	Large reflecting telescopes built in sections	39
1.2.3.7	Single reflecting antennas – cm wavelengths	39
1.2.3.8	Reflecting antennas for mm and sub-mm wavelengths	41
1.2.3.9	Operational synthesis arrays at cm and long mm wavelengths	42
1.2.3.10	mm and sub-mm synthesis arrays	42
1.2.3.11	Special antennas	42
1.2.3.12	Very long baseline interferometry (VLBI)	43
1.2.3.13	New radio telescope projects	44
1.2.4	Radio astronomy receivers (analog)	45
1.2.4.1	General	45
1.2.4.2	Receiver systems (total power, super-heterodyne)	45

1.2.4.3	The Dicke-receiver system	46
1.2.4.4	The correlation receiver	47
1.2.4.5	Interferometer circuits	47
1.2.4.6	Polarimeters	48
1.2.4.7	Multibeam systems	48
1.2.4.8	Low noise amplifiers, filters, IF amplifiers, detectors	49
1.2.4.8.1	General	49
1.2.4.8.2	HEMT amplifiers, MMIC LNAs	49
1.2.4.8.3	Further receiver system components, mixers, IF amplifiers, detectors	52
1.2.5	Radio astronomy back-ends	53
1.2.5.1	Radio continuum techniques	53
1.2.5.1.1	Voltage to frequency continuum back-end	53
1.2.5.1.2	Analog to digital converter continuum back-end	54
1.2.5.2	Spectrometers for radio astronomy	54
1.2.5.2.1	Analog filter bank spectrometers	55
1.2.5.2.2	Acousto-Optical Spectrometers (AOS)	56
1.2.5.2.3	Chirp transform spectrometer (CTS)	57
1.2.5.2.4	Auto-correlator spectrometer (ACS)	57
1.2.5.2.5	Fast Fourier Transform spectrometer (FFTS)	58
1.2.5.3	Pulsar equipment	60
1.2.5.3.1	Incoherent de-dispersion	61
1.2.5.3.2	Coherent de-dispersion	62
1.2.6	References for 1.2	63
1.3	Infrared instrumentation (DIETRICH LEMKE)	68
1.3.1	Infrared telescopes on the ground	69
1.3.1.1	Limitations by the atmosphere	69
1.3.1.2	Optics of IR-telescopes	73
1.3.2	Infrared detectors	74
1.3.2.1	Near- and mid-infrared detector arrays	75
1.3.2.2	Far infrared detectors	77
1.3.2.3	Bolometer arrays	78
1.3.3	Cooling techniques	78
1.3.3.1	Telescopes	78
1.3.3.2	Detectors	79
1.3.4	Focal plane instrumentation	82
1.3.4.1	Components (coating, filters, fibers, mechanisms)	83
1.3.4.2	Imagers	85
1.3.4.3	Spectrometers	85
1.3.4.4	Polarimeters	87
1.3.4.5	Instruments for future large telescopes	88
1.3.5	Interferometers	88
1.3.5.1	Michelson type interferometers	89
1.3.5.2	Fizeau type interferometers	90
1.3.5.3	Nulling interferometers	91
1.3.5.4	Upcoming instruments and future development	92
1.3.6	Infrared space telescopes	93
1.3.6.1	Aircraft, balloons, rockets	96
1.3.6.2	IR satellites	98
1.3.6.3	Recent and future missions	102
1.3.6.4	Data archives	103
1.3.7	References for 1.3	104

1.4	UV and EUV instruments (KLAUS WERNER)	109
1.4.1	EUV instruments	112
1.4.1.1	EUV detectors	112
1.4.1.2	EUV telescopes	113
1.4.1.3	EUV photometry and spectroscopy	113
1.4.1.4	Notes on specific EUV missions	114
1.4.2	UV instruments	114
1.4.2.1	UV detectors	114
1.4.2.2	UV telescopes	115
1.4.2.3	UV photometry, spectroscopy, and polarimetry	115
1.4.2.4	Notes on specific UV missions	115
1.4.3	References for 1.4	116
1.5	X-ray and γ -ray instruments (RÜDIGER STAUBERT)	120
1.5.1	X-ray instruments	120
1.5.1.1	Non-focusing instruments	120
1.5.1.1.1	Non-focusing/non-imaging/non-dispersive instruments	120
1.5.1.1.2	Non-focusing/imaging instruments – Aperture Modulation	123
1.5.1.2	Dispersive spectrometers	125
1.5.1.2.1	Bragg crystal spectrometers	125
1.5.1.2.2	Grating spectrometers	126
1.5.1.3	Polarimeters	126
1.5.1.4	Focusing X-ray telescopes	128
1.5.1.4.1	X-ray mirror systems	128
1.5.1.4.2	X-ray imaging detectors	129
1.5.1.4.3	Dispersive spectrometers	130
1.5.1.4.4	Non-dispersive focal plane spectrometers	130
1.5.2	γ -ray instruments	131
1.5.3	TeV γ -ray instruments	132
1.5.3.1	Cherenkov light telescopes	132
1.5.3.2	Particle detector arrays	133
1.5.4	X- and γ -ray satellites	134
1.5.5	References for 1.5	136
1.6	Cosmic-ray detectors (DIETRICH MÜLLER)	143
1.6.1	Overview and Techniques	143
1.6.1.1	Introduction	143
1.6.1.2	Basic techniques	144
1.6.1.2.1	Definitions	144
1.6.1.2.2	Ionization measurements	146
1.6.1.2.3	Trajectory determination	147
1.6.1.2.4	Cherenkov and transition radiation detectors	147
1.6.1.2.5	Magnet spectrometers	148
1.6.1.2.6	Calorimeters	149
1.6.2	Detector systems for direct observations	149
1.6.2.1	Low-energy elemental and isotopic composition measurements	149
1.6.2.1.1	The ΔE vs. E technique	149
1.6.2.1.2	Examples of low-energy detector systems	150
1.6.2.1.3	Detection of ultra-heavy cosmic-rays	154

1.6.2.2	Elemental composition and energy spectra of relativistic cosmic-ray nuclei	157
1.6.2.2.1	Overview	157
1.6.2.2.2	Instruments flown in space	158
1.6.2.2.3	Instruments on balloons	161
1.6.2.3	Abundances and energy spectra of electrons and anti-particles	168
1.6.2.3.1	General comments	168
1.6.2.3.2	Detectors for the observation of electrons ($e^+ + e^-$)	169
1.6.2.3.3	Magnet spectrometers for positrons and anti-nuclei	174
1.6.2.4	Imaging air-Cherenkov telescopes	178
1.6.3	Air shower observations	178
1.6.3.1	Overview	178
1.6.3.1.1	Observables and range of energies	178
1.6.3.1.2	Classes of air shower detectors	179
1.6.3.2	Surface arrays for energies below 10^{17} eV	179
1.6.3.3	Air-fluorescence telescopes	184
1.6.3.4	Surface arrays for ultra-high energies	188
1.6.4	Conclusions	193
1.6.5	References for 1.6	193
1.7	Neutrino astronomy (KAI ZUBER)	198
1.7.1	Astrophysical neutrinos	198
1.7.2	Low energy neutrino detection	199
1.7.2.1	Radiochemical detection	199
1.7.2.2	Real time detection	199
1.7.2.2.1	Cerenkov detectors	199
1.7.2.2.2	Scintillation detectors	200
1.7.2.2.3	Nuclear coincidence detectors	200
1.7.3	High energy ($> \text{TeV}$) neutrino detection	200
1.7.3.1	Cerenkov neutrino telescopes	200
1.7.3.2	Alternative detection methods	200
1.7.4	Compilation of past and present experiments	201
1.7.5	References for 1.7	201
1.8	Gravitational wave detectors (PETER AUFMUTH)	203
1.8.1	Introduction	203
1.8.2	Resonant mass detectors	204
1.8.3	Laser interferometers	205
1.8.4	Measurements and results	207
1.8.5	Outlook	207
1.8.6	References for 1.8	208
1.8.7	Websites	209
2	Solar instruments	210
2.1	Solar telescopes (OSKAR VON DER LÜHE)	210
2.1.1	Telescope arrangements	210
2.1.2	Post focus instruments	211
2.1.3	Detectors	211
2.1.4	List of solar telescopes	212

2.2	Solar radio telescopes (GOTTFRIED MANN)	216
2.2.1	Introduction	216
2.2.2	Solar radio receivers	218
2.2.3	References for 2.2	225
2.3	Solar short-wavelength telescopes and spectrometers on space missions (KLAUS WILHELM)	226
2.3.1	Introduction	226
2.3.2	Optical design concepts	227
2.3.2.1	Normal-incidence telescopes	227
2.3.2.1.1	Single-mirror systems	227
2.3.2.1.2	Two-mirror systems	228
2.3.2.2	Grazing-incidence telescopes	228
2.3.2.3	Collimators	228
2.3.2.4	Spectrometers	228
2.3.3	Solar UV instruments	230
2.3.4	Solar observations in X-rays	234
2.3.5	Solar observations in γ -rays	236
2.3.6	References for 2.3	237
3	Astronomical reference systems (MICHAEL SOFFEL)	242
3.1	Time	242
3.1.1	Quartz- and atomic clocks	242
3.1.2	Cesium-clocks	243
3.1.3	Rubidium-clocks	243
3.1.4	H-maser	244
3.1.5	Fountain-clocks	244
3.1.6	Optical-clocks	244
3.1.7	The geocentric time-scales TCG, TT, TAI and UTC	246
3.1.8	Time zones	247
3.1.9	Julian date	248
3.1.10	The barycentric timescales TCB, T_{eph} and TDB	248
3.1.11	The Fairhead-Bretagnon series	249
3.2	Classical astronomical coordinate systems	250
3.2.1	Horizon coordinates	250
3.2.2	Equatorial coordinates of the 1st kind	251
3.2.3	Equatorial coordinates of the 2nd kind	251
3.2.4	Ecliptic coordinates	252
3.2.5	Relations between the various astronomical coordinates	253
3.2.6	Relations between (z, A) and (δ, h)	253
3.2.7	Relations between (h, δ) and (α, δ)	254
3.2.8	Relations between (α, δ) and (λ, β)	254
3.2.9	GMST, GAST and (local) sidereal time	254
3.3	Modern methods of geodetic astronomy	255
3.3.1	Satellite Laser Ranging (SLR)	255
3.3.2	Lunar Laser Ranging (LLR)	256
3.3.3	Very Long Baseline Interferometry (VLBI)	256
3.3.4	Global positioning system (GPS)	257
3.3.4.1	Space segment	258

3.3.4.2	Control segment	258
3.3.4.3	User segment	258
3.3.4.4	GPS signals, code and carrier	259
3.3.4.5	Differential GPS (DGPS)	259
3.3.5	Global Navigation Satellite System (GLONASS)	259
3.3.6	Doppler Orbitography by Radiopositioning Integrated on Satellite (DORIS)	260
3.3.7	GALILEO	260
3.3.8	Ring laser gyros	260
3.4	Astrometric space missions	261
3.4.1	High Precision Parallax Collecting Satellite (HIPPARCOS)	261
3.4.2	The astrometric project GAIA	263
3.5	Variations of stellar positions	263
3.5.1	Solar system ephemerides	263
3.5.2	VSOP ephemerides	266
3.5.3	Refraction	266
3.5.4	Parallax	268
3.5.4.1	Annual parallax	268
3.5.4.2	Geocentric parallax	269
3.5.5	Aberration	269
3.5.5.1	Annual aberration	269
3.5.5.2	Daily aberration	270
3.5.6	Proper motion	270
3.5.7	Precession and nutation	270
3.5.7.1	Apparent, true and mean places	270
3.5.7.2	Precession – nutation matrices	271
3.5.7.3	Astronomical nutation	273
3.6	Celestial and terrestrial reference systems	274
3.6.1	The classical celestial reference system	274
3.6.2	The International Terrestrial Reference System (ITRS)	276
3.7	Polar motion	276
3.8	Universal Time, UT1 and lod-variations	278
3.8.1	Universal Time (UT)	278
3.8.2	UT1 and UT1-variations	278
3.9	BCRS and GCRS	278
3.9.1	Barycentric Celestial Reference System (BCRS)	278
3.9.2	The EIH-equations of motion	280
3.9.3	High accuracy astrometry	281
3.9.3.1	Relativistic aberration	282
3.9.3.2	Gravitational light-deflection	282
3.9.3.3	Parallax	282
3.9.4	Geocentric Celestial Reference System (GCRS)	283
3.10	The International Celestial Reference System (ICRS)	284
3.10.1	Orientation of the ICRS	284
3.10.2	Realization of the ICRF in the optical	284
3.11	The Celestial Intermediate Pole (CIP)	284
3.11.1	Motion of the CIP in the GCRS	286
3.11.1.1	Celestial Pole Offsets	286
3.11.1.2	The IAU-2000 precession-nutation model	286
3.11.1.3	Fundamental nutation angles	288
3.11.1.4	X and Y coordinates of the CIP	289
3.11.1.5	The bias-matrix	289
3.11.2	Motion of the CIP in the ITRS	290

3.12	CIO, TIO, ERA and GST.	291
3.12.1	The Celestial Intermediate Origin (CIO)	291
3.13	Astronomical constants and current best estimates.	294
3.14	References for 3	295
