<b>About the Author</b>	<b>ix</b>
<b>Preface</b>	<b>1</b>
<b>1 “Reflections on the motive power of fire ...”</b>	<b>3</b>
Sadi Carnot . . . . .	3
Caloric . . . . .	4
The irreversibility of heat processes . . . . .	6
What did Carnot do? . . . . .	9
The Carnot cycle . . . . .	11
Thermodynamic temperature . . . . .	16
<b>2 The laws of thermodynamics</b>	<b>19</b>
Lomonosov and the conservation laws . . . . .	19
The law of conservation of energy . . . . .	21
The second law . . . . .	23
The pressure of light . . . . .	24
Entropy . . . . .	25
The logarithm and exponential functions . . . . .	27
Calculation of entropy . . . . .	30
Measuring entropy experimentally . . . . .	34
Irreversible processes . . . . .	37
<b>3 Entropy and free energy</b>	<b>41</b>
Obtaining useful work . . . . .	41
Equilibrium conditions . . . . .	43
A chemical reaction . . . . .	45
Melting of crystals and evaporation of liquids . . . . .	48
Why does alcohol dissolve in water yet gasoline not do so? . . . . .	49
Hydrophobic forces and the albumin globule . . . . .	51
What do rubber and an ideal gas have in common? . . . . .	53
Why do we heat a room? . . . . .	57

“The mistress of the world and her shadow” . . . . .	59
Why was Emden right? . . . . .	60
<b>4 Entropy and probability</b>	<b>63</b>
Boltzmann’s formula . . . . .	63
Stirling’s formula . . . . .	66
The meaning of Boltzmann’s formula . . . . .	68
The fusion of a crystal and the evaporation of a liquid . . . . .	71
Entropic forces . . . . .	72
Entropy of equilibrium states . . . . .	76
A little quantum mechanics . . . . .	78
Gibbs’ paradox . . . . .	80
Nernst’s theorem . . . . .	81
<b>5 Statistics and mechanics</b>	<b>85</b>
The distribution of velocities, and temperature . . . . .	85
The barometric formula and the “gravitational perpetuum mobile” . . .	90
Fluctuations . . . . .	93
Why is the sky blue? . . . . .	98
The age of Darwin . . . . .	100
Laplace’s demon and Sinai’s billiard . . . . .	103
The fate of the universe . . . . .	107
<b>6 Open systems</b>	<b>113</b>
The production and flow of entropy . . . . .	113
The dissipation function . . . . .	116
An astronaut lives on negative entropy . . . . .	119
Why do cells divide? . . . . .	124
Far from equilibrium . . . . .	125
The Belousov–Zhabotinskiĭ reaction . . . . .	131
Organisms as dissipative systems . . . . .	133
The three stages of thermodynamics . . . . .	138
<b>7 Information</b>	<b>141</b>
Information and probability . . . . .	141
Informational entropy . . . . .	145
Information and entropy . . . . .	151
Maxwell’s demon . . . . .	154
Obtaining and creating information . . . . .	157
The value of information . . . . .	160

<b>8 Entropy, information, life</b>	<b>165</b>
The thermodynamics of living organisms . . . . .	165
Biological evolution, entropy, and information . . . . .	169
The value of biological information . . . . .	174
Complexity and irreplaceability . . . . .	181
Complexity and Gödel's theorem . . . . .	185
Information and artistic creation . . . . .	186
<b>Index</b>	<b>197</b>
