**Preface** *XI*

**Color Plates** *XV*

<b>1</b>	<b>Observational Phenomena of Solar Flares</b>	<b>1</b>
1.1	Observational Constraints	1
1.2	Hard X-Ray Light Curves and Spectra	1
1.2.1	Light Curves	1
1.2.2	Photon and Electron Energy Spectra	2
1.2.3	Electron Numbers	4
1.3	Light Curves and Energy Spectra of Gamma-Rays	5
1.3.1	$\gamma$ -Ray Light Curves	5
1.3.2	Energy Spectra and Abundances of Ions in Flares	6
1.3.3	Ion Numbers	6
1.4	Geometry of Hard X-Ray and Gamma-Ray Sources	7
1.4.1	Differences in Footpoint Spectral Indices	7
1.4.2	Hard X-Ray and Gamma-Ray Source Locations	9
1.5	Pre- and Postflare Hard X-Ray and Radio Emission	9
1.6	Magnetic Field Changes Associated with Flares	11
1.6.1	Local Magnetic Field Variations	11
1.7	UV and Optical Emission	15
1.8	Seismic Responses	16
1.9	Critical Issues	18
<b>2</b>	<b>Particle Acceleration in Flares</b>	<b>21</b>
2.1	Models of Particle Acceleration	21
2.1.1	Basic Physics	21
2.1.2	Magnetic Reconnection Models Associated with Flares	22
2.1.3	Particle Acceleration in a Reconnecting Current Sheet	26
2.1.4	Particle Acceleration by Shocks and Turbulence	29
2.2	Recent Theoretical Developments	33
2.2.1	Stochastic Acceleration	33
2.2.2	Electron Acceleration in Collapsing Current Sheets	35

2.2.3	Particle Acceleration in a Single 3-D RCS with Complicated Magnetic Topology	40
2.2.4	Estimations of Accelerated Particle Parameters	46
2.2.5	Comparison of the Parameters of Accelerated Particles	48
2.2.6	Particle Acceleration in 3-D MHD Models with Fan and Spine Reconnection	49
2.3	Limitations of the Test-Particle Approach	54
2.3.1	The Polarization Electric Field	55
2.3.2	Turbulent Electric Fields	55
2.4	Particle-in-Cell Simulation of Acceleration in a 3-D RCS	57
2.4.1	Problem Formulation	57
2.4.2	Test-Particle Simulations	60
2.4.3	PIC Simulation Results	62
2.5	Particle Acceleration in Collapsing Magnetic Islands	70
2.5.1	Tearing-Mode Instability in Current Sheets	70
2.5.2	Particle Acceleration in Magnetic Islands – PIC Approach	71
2.6	Limitations of the PIC Approach	74
2.7	Probing Theories versus Observations	76
2.7.1	Interrelation between Acceleration and Transport	76
2.7.2	Testing Acceleration Models against Observational Constraints	77
<b>3</b>	<b>Electron-Beam Precipitation – Continuity Equation Approach</b>	<b>81</b>
3.1	Introduction	81
3.2	Particle Energy Losses	82
3.2.1	Particle Trajectories at Scattering	82
3.2.2	Energy Loss and Momentum Variations	84
3.3	Continuity Equation Approach for Electrons: Pure Collisions	92
3.3.1	Solutions of Continuity Equation for Power-Law Beam Electrons	93
3.3.2	Beam Electron Densities	95
3.3.3	Mean Electron Spectra	96
3.3.4	Hard X-Ray Bremsstrahlung Emission by Beam Electrons	97
3.3.5	Heating Functions	102
3.4	Continuity Equation Approach for Electrons – Pure Electric Field	104
3.4.1	Estimation of the Ohmic Loss Effect	105
3.4.2	Kinetic Solutions for a Pure Electric Field	109
3.4.3	Estimations of Electron-Beam Stability	118
<b>4</b>	<b>Electron Beam Precipitation – Fokker–Planck Approach</b>	<b>121</b>
4.1	General Comments on Particle and Energy Transport	121
4.2	Problem Formulation	122
4.2.1	The Fokker–Planck Equation	122
4.2.2	Normalization of a Distribution Function	124
4.2.3	Dimensionless Equations	125
4.2.4	Integral Characteristics of an Electron Beam	127
4.3	Simulation Method	128
4.4	Stationary Fokker–Planck Approach ( $df/dt = 0$ )	129

4.4.1	Initial Condition	129
4.4.2	Beam Electron Distribution Functions	130
4.4.3	Electron-Beam Density Variations with Depth	140
4.4.4	Mean Electron Fluxes	142
4.5	Time-Dependent Fokker–Planck Equation	143
4.5.1	Initial and Boundary Conditions	144
4.5.2	Relaxation to a Steady State	145
4.6	Regime of a Stationary Injection	147
4.6.1	Distributions of Electron Beams with a Lower-Energy Part	147
4.6.2	Variations of Electron-Beam Density	153
4.6.3	Effects of Magnetic Field Convergence	155
4.6.4	Mean Electron Fluxes of a Steady Beam	159
4.6.5	Plasma Heating by a Stationary Beam in Converging Magnetic Field	159
4.7	Impulsive Injection	161
4.7.1	Mean Electron Flux for Beam Impulse	162
4.7.2	Energy Deposition by a Beam Impulse	164
4.8	Conclusions	167
<b>5</b>	<b>Proton Beam Kinetics</b>	<b>169</b>
5.1	Proton Beam Distribution Function	169
5.1.1	Effect of Coulomb Collisions on Proton Precipitation	169
5.1.2	Effect of a Self-Induced Electric Field on Proton Precipitation	172
5.1.3	Effect of Magnetic Field Convergence on Proton Precipitation	172
5.1.4	Effect of Wave–Proton Interaction	172
5.1.5	Collisions versus Kinetic Alfvén Waves: the Effect on Proton Precipitation	174
5.1.6	Fokker–Planck Equation for Proton Beams	176
5.2	Precipitation of Proton Beam: Numerical Simulations	177
5.2.1	Numerical Calculation of Proton Beam Distribution Function	177
5.2.2	Accepted Parameters	179
5.2.3	Proton Beam Distribution Functions	179
5.3	General Discussion of Proton and Electron Precipitation	182
5.3.1	Beam Spectra at Precipitation	182
5.3.2	Energy and Momentum Transfer	182
<b>6</b>	<b>Hydrodynamic Response to Particle Injection</b>	<b>187</b>
6.1	Hydrodynamic Equations	187
6.1.1	Additional Equations	188
6.1.2	Boundary Conditions	189
6.2	Hydrodynamic Responses to Heating by Electron Beams	190
6.2.1	The Heating Functions by High Energy Particles	190
6.2.2	Simulated Heating Functions	190
6.2.3	Hydrodynamics Caused by Electron Beams	192
6.2.4	Hydrodynamics Formed by Mixed Electron and Proton Beams	197
6.2.5	Momenta Delivered by Beams and Hydrodynamic Shocks	199

6.2.6	Comparison of Ambient Heating by Electrons and Protons for October 2003 Flare	28
6.3	Case Study of a Hydrodynamics of the 25 July 2004 Flare	204
6.3.1	Observations	204
6.3.2	Hydrodynamics of Ambient Plasma	211
6.4	Conclusions	213
<b>7</b>	<b>Hard X-Ray Bremsstrahlung Emission and Polarization</b>	<b>215</b>
7.1	Introduction	215
7.2	Stokes Parameters for HXR Emission	216
7.2.1	Geometry of Observations	217
7.2.2	Nonrelativistic HXR Cross-Sections	219
7.2.3	Relativistic Angle-Dependent Cross-Sections	221
7.3	Simulation Results	223
7.3.1	Time-Dependent Hard X-Ray Photon Spectra for a Short Impulse	223
7.3.2	HXR Emission with Nonrelativistic Cross-Sections for Steady Injection	224
7.3.3	HXR Emission with Relativistic Cross-Sections for Steady Injection	229
7.3.4	HXR Bremsstrahlung Directivity and Polarization for a Steady Beam Injection	234
7.4	Comparison with Observations	239
7.4.1	HXR Bremsstrahlung Photon Spectra	239
7.4.2	HXR Bremsstrahlung Directivity and Polarization	241
7.4.3	Relationships between Electron and HXR Photon Spectra and Electron Numbers	244
<b>8</b>	<b>Microwave Emission and Polarization</b>	<b>247</b>
8.1	General Comments	247
8.2	Evaluation of Models for Electron Precipitation	249
8.3	Gyrosynchrotron Plasma Emissivity and Absorption Coefficient	251
8.4	Gyrosynchrotron Emission from a Homogeneous Source	253
8.4.1	Depth Variations of MW Emission	253
8.4.2	Gyrosynchrotron Emission from a Whole Coronal Magnetic Tube	260
8.5	Comparison with Observations	263
8.5.1	Flare of 23 July 2002	263
8.5.2	Flare of 10 March 2001	265
8.5.3	Simulated HXR and MW Emission	270
8.6	Conclusion	283
<b>9</b>	<b>Langmuir Wave Generation by Electron Beams</b>	<b>287</b>
9.1	Electron Beams and Their Stability	287
9.2	Basic Equations	289
9.2.1	Method of Solution and Model Parameters	290

9.3	Results and Discussion	291
9.3.1	Electric Field Effects on Langmuir Turbulence	291
9.4	Conclusions	298
<b>10</b>	<b>Nonthermal Hydrogen Emission Caused by Electron Beams</b>	<b>301</b>
10.1	Introduction	301
10.2	Nonthermal Excitation and Ionization Rates	302
10.2.1	Beam Electron Density	303
10.2.2	Nonthermal Hydrogen Excitation Rates	304
10.2.3	Nonthermal Hydrogen Ionization Rates	306
10.2.4	Comparison of Thermal and Nonthermal Excitation and Ionization Rates	306
10.3	Hydrogen Emission Produced by Impacts with Beam Electrons	307
10.3.1	Equations of Statistical Equilibrium	309
10.3.2	Radiative Transfer Equations	310
10.3.3	Conservation Equation for a Particle Number	311
10.3.4	Method of Solution	312
10.3.5	Accepted Parameters	313
10.4	Hydrogen Excitation and Ionization	313
10.4.1	Comparison of Nonthermal and Thermal Excitation and Ionization Rates	313
10.4.2	Nonthermal Effects on Hydrogen Emission	317
10.4.3	Hydrogen Radiative Losses in Flares	322
10.4.4	Role of Backwarming Heating	322
10.5	Interpretation of $H_{\alpha}$ Emission in 25 July 2004 Flare	324
10.5.1	Fast Changes of $H_{\alpha}$ Emission in the Main Flare Event	324
10.5.2	Temporal and Spatial Evolution of the Main Flare Event	325
10.5.3	Resulting $H_{\alpha}$ Emission	328
<b>11</b>	<b><math>H_{\alpha}</math>-Line Impact Polarization</b>	<b>331</b>
11.1	Introduction	331
11.2	Basic Models	333
11.2.1	Physical Model	333
11.2.2	Kinetic Model	333
11.2.3	Radiative Model	334
11.3	Density Matrix Approach	336
11.3.1	Steady State Equation	336
11.3.2	Radiative Tensor	337
11.3.3	Collisional Tensor	338
11.3.4	Probabilities of Radiative Transitions	338
11.3.5	Probabilities of Collisional Transitions	339
11.3.6	Stokes Parameters	339
11.4	Results and Discussion	340
11.4.1	$H_{\alpha}$ -Line Polarization Profiles	343
11.4.2	Depth and Time Variations of $H_{\alpha}$ -Line Polarization	344
11.4.3	Interpretation of Observational Features	345

11.5	Interpretation of Polarimetric $H_{\alpha}$ Observations	346
11.5.1	Revised Theoretical Model	349
11.5.2	Results of Observations	353
11.5.3	Observational Recommendations	356
11.6	Conclusions	357
<b>12</b>	<b>Sunquakes Associated with Solar Flares</b>	<b>359</b>
12.1	First Sunquake of 9 July 1996 Flare	359
12.1.1	Methods of Sunquake Detection	361
12.1.2	Results from First Sunquake Detection	363
12.1.3	Discrepancies between the Parameters Derived and the Basic Flare Theory	364
12.2	Observations of Other Sunquakes	365
12.3	Sunquakes Associated with the Flare of 28 October 2003	367
12.3.1	Hard X-Ray, $\gamma$ -Ray Emission, and Accelerated Particles in the Earth's Orbit	368
12.3.2	Observed Seismic Sources	371
12.3.3	Comparison of Momenta Delivered by Beams and Hydrodynamic Shocks	376
12.4	Seismic Sources Observed by GONG in 14 December 2006 Flare	378
12.4.1	Flare Morphology and Evolution	379
12.4.2	Photospheric and Chromospheric Signatures for the 14 December 2006 Flare	379
12.4.3	Photospheric Velocities	380
12.5	Observations of Solar Interior	381
12.5.1	Validation of Time–Distance Analysis with GONG	383
12.5.2	Helioseismic Results	383
12.5.3	Summary of Observed Signatures in Sunquakes	387
12.6	Theoretical Implications of Particle Kinetics and Dynamics Leading to Sunquakes	388
12.6.1	Topology of Particle Acceleration	388
12.6.2	Particle Precipitation	389
12.6.3	Plasma Responses to High-Energy Particles	391
12.7	Nonthermal Ionization and Backwarming Heating	395
12.7.1	Hydrogen Nonthermal Excitation and Ionization	395
12.7.2	The Role of Backwarming Heating	396
12.7.3	Ni-Line Emission	397
12.7.4	Generation of Seismic Response by a Pinpoint Source	401
12.7.5	Magnetic Field Change During Flares	402
12.8	Conclusion	404
