

Table of Contents

Uranium Dioxide UO_2	Page
4 Mechanical and Thermal Properties	1
4.1 Density and Thermal Expansion	1
4.1.1 Introduction	1
4.1.2 Density	1
Dependence on Temperature and Stoichiometry	1
Effects of Irradiation	3
4.1.3 Thermal Expansion	5
4.2 Elastic Properties	8
4.2.1 Introduction	8
4.2.2 Single Crystals	10
4.2.3 Polycrystalline Samples	11
Porosity Dependence of Elastic Properties at Room Temperature	11
Dependence on Stoichiometry and Grain Size of Sample	12
Temperature Dependence	13
Influence of Additives on Elastic Properties	16
4.2.4 Damping of Elastic Waves	16
4.2.5 Compressibility of Molten Uranium Dioxide	17
4.3 Hardness	19
4.4 Creep	23
4.4.1 Introduction	23
4.4.2 Creep of UO_2 Single Crystals	30
4.4.3 Creep of Polycrystalline UO_2	31
4.4.4 Creep of Uranium Dioxide under Neutron Irradiation	37
4.5 Plastic Behavior	43
4.5.1 Single Crystals	43
4.5.2 Polycrystalline UO_2	45
Brittle Range	45
Plastic Region	50
4.6 Volume Changes Under Irradiation Due to Sintering and Swelling	53
4.6.1 General Comments and Overview	53
4.6.2 Irradiation-Induced Sintering of Porous UO_2	54
4.6.3 Swelling of UO_2	57
Swelling due to Fission Gases	57
Formation of Intragranular Bubbles	58
Redissolution Effects	58
Bubble Migration	60
Grain Boundary Bubbles and Porosity	61
Swelling due to Solid Fission Products	63
Experimental Results	64
4.7 Phase Relations and Thermodynamic Functions	72
4.7.1 Melting Point	72
4.7.2 Enthalpy of Fusion	74
4.7.3 Vapor Pressure and Boiling Point	74
4.7.4 Critical Constants	84

	Page
4.7.5 Equation of State. Grüneisen Constant	85
4.7.6 Heat Capacity and Thermodynamic Functions	87
Solid and Liquid Phases	87
Standard Values	87
Values at Low Temperatures up to Room Temperature	88
At Higher Temperatures	89
Theory	103
Thermodynamic Functions for the Vapor Phase	106
4.7.7 Characteristic Temperature	111
4.8 Transport Phenomena	113
4.8.1 Uranium Self-Diffusion	113
Theoretical Foundation	113
Experimental Data	114
Stopping Power of Uranium Dioxide for α -Particles	119
Irradiation-Induced Self-Diffusion of U in UO_2	122
4.8.2 Surface Diffusion, Grain Boundary Diffusion	125
Basics	125
Surface Diffusion, Surface Energy	127
Grain Boundary Diffusion	129
4.8.3 Oxygen Self-Diffusion	131
Theoretical Fundamentals	131
Experimental Results	132
Chemical Diffusion of Oxygen	138
4.8.4 Material Transport in a Temperature Gradient	140
Introduction	140
Theoretical Fundamentals	140
Segregation via Thermal Diffusion	140
Segregation via Evaporation and Condensation in a Temperature Gradient	143
Segregation of Oxygen via a Gas Phase Transport	144
Experimental Results	145
Results from Laboratory Experiments	145
Results from Irradiation Experiments	149
4.8.5 Diffusion and Solubility of Noble Gases	152
General Remarks	152
Experimental Results	155
Dependence on the Fission Density or Rod Power	161
Dependence on the Oxygen/Uranium Ratio	163
Mechanism of Noble Gas Diffusion	164
4.8.6 Thermal Conductivity	168
Introduction and Early Work	168
The Thermal Conductivity in the Temperature Region Below 300 K	169
Experimental Data	169
Interpretation of Experimental Data	170
The Thermal Conductivity Between 300 K and the Melting Point	171
The Single Crystal	173
Experimental Data	173
Interpretation of the Experimental Data	174
Polycrystalline Uranium Dioxide	174

The Influence of the Porosity	174
General Remarks	174
Theoretical Equations for the Porosity Corrections of Thermal Conductivity	175
The Introduction of Empirical Factors	176
Experimental Data of the Porosity Effect on Thermal Conductivity	176
Conclusion	178
The Influence of Grain Size	178
The Monophasic, Polycrystalline, Highly Densified Nearly Stoichiometric UO_2	179
Experimental Data and Recommended Curves	179
Theoretical Considerations on the Temperature Dependence of the Thermal Conductivity	183
Further Experimental Data on Nearly Stoichiometric UO_2	185
Further Experimental Data on Nominal UO_2	185
The Influence of Oxygen on the Thermal Conductivity of UO_2	185
Influence of Additives	187
Metallic Additives as a Second Phase	187
Metal Oxides in Solid Solutions with UO_2	187
The Influence of Neutron Irradiation	188
The Thermal Conductivity of UO_2 Powder	194
The Thermal Conductivity of Molten UO_2	194
The Thermal Conductivity of UO_2 Vapor	195
The Thermal Conductivity in the System $\text{UO}_2\text{-PuO}_2$	195
General Remarks	195
The Influence of Pu Content	195
The Influence of Oxygen	197
The Effect of Neutron Radiation	198
5 Electrical and Magnetic Properties	206
5.1 Dielectric Properties	206
5.2 Electrical Conductivity	207
Early Work	207
5.2.1 The Electrical Conductivity of UO_2 Single Crystals	207
Experimental Data for the Monocrystal	207
Conduction Mechanism in Monocrystalline UO_2	210
Influence of Irradiation on the Electrical Conductivity of UO_2 Single Crystals	210
5.2.2 The Electrical Conductivity of Polycrystalline UO_2	211
The Effect of the Microstructure	211
The Temperature Region with Extrinsic Conduction	212
Experimental Data	212
The Electric Conduction Mechanism in Polycrystalline UO_2 in the Extrinsic Region	216
The Intrinsic Temperature Region	217
Experimental Data	217
Interpretation of the Experimental Data	218
Influence of Irradiation on the Electrical Conductivity of Polycrystalline UO_2	218
5.2.3 Experimental Results on the Electrical Behavior of Molten UO_2	219
5.2.4 The Electrical Conductivity in the System $\text{UO}_{2\pm x}\text{-PuO}_{2\pm x}$	219
5.3 Hall Effect. Thermoelectric Properties	224
5.4 Magnetic Susceptibility	226

	Page
6 Optical and Spectroscopic Properties	229
6.1 Introduction	229
Theory of the Bond and Ground State Properties in UO_2	230
6.2 Optical Spectroscopy and the Electronic Structure of UO_2	234
6.2.1 Transmission Spectra of UO_2	234
Essentially Phononic Structures	235
The Electronic Spectral Range	236
Absorption Edges E_1 and E_2	237
6.2.2 Reflectivity Spectra in the Fundamental Absorption Region and the Electronic Structure of UO_2	238
Reflectivity Spectra	238
The Analysis of the Reflectivity Spectra	239
Sum Rules	241
The Electron Energy Loss Function	242
Empirical Models of the Electronic Structure of UO_2 from Optical Experiments	242
Magneto-Optical Measurements on UO_2	244
6.2.3 X-Ray Absorption and Emission	245
6.2.4 Conclusions	245
6.3. Photoelectronic Spectroscopy and the Electronic Structure of UO_2	246
6.3.1 The Valence Band Spectrum of UO_2	246
6.3.2 Evidence of 5f Localization and f-p Mixing in UO_2 from Valence Band Spectra	251
6.3.3 Core Level Spectra in UO_2	255
Generalities	255
The 4f Core Levels (Main Lines and Satellites) in UO_2 and Their Interpretation	256
Other Core Level Lines in UO_2	259
6.3.4 Conclusions	259
6.4 The Vibrational Spectrum of UO_2	260
The Theory of Phonons in UO_2 (Fluorite Structure)	260
Determination of Vibrational Frequencies in UO_2	260
Determination of ϵ_∞ , ϵ_0 and the Application of Shell-Models to the Vibration Results	262
Transmission Spectra of UO_2 in the Far Infrared Region	263
Multiphonon Excitations in the Near Infrared Transmission Spectrum of UO_2	264
6.5 Spectroscopic Determination and Interpretation of Nonstoichiometry in UO_{2+x}	265
Introduction	265
6.5.1 Optical Spectroscopy in UO_{2+x}	266
The Reststrahlen Vibrational Spectrum of UO_2 , U_4O_9 , and UO_{2+x}	266
Powder Transmission Spectra for the Determination of Hyperstoichiometry in UO_{2+x}	267
6.5.2 Photoemission Spectroscopy in UO_{2+x}	268
The Valence Band Spectra of UO_{2+x}	268
Core Level Main Lines and Satellites for UO_{2+x}	269
6.5.3 A Correlation Between Photoemission Data and Thermochemical Quantities in UO_{2+x}	271
7 The UO_2 Molecule and the UO_2^+ Ion	276
7.1 Formation	276

7.2 Thermodynamic Data of Formation and Dissociation	278
7.3 Electronic Structure	280
7.4 Structure. Molecular Vibrations. IR Spectra	281
8 Electrochemical Behavior	284
8.1 Potentials	284
8.1.1 Potentials in Aqueous Solution	284
8.1.2 Potentials in Melts	284
8.1.3 Potentials with Solid Electrolytes	289
8.2 Electrokinetic Phenomena	291
8.3 Uranium Dioxide Anodes	292
8.3.1 Anodes in Aqueous Solution	292
8.3.2 Anodes in Melts	295
Polarization of UO_2 Anodes in Chloride Melts	295
Electrolysis with UO_2 Anodes in Chloride Melts	296
Electrolysis with UO_2 Anodes in Fluoride Melts	297
8.4 Electrolysis of UO_2 Melts	299
8.5 Polarography in Melts	300
Polarograms with Pt or Graphite Indicator Electrodes	300
Cyclovoltammograms, Chronopotentiograms	303
8.6 Electrodeposition	304
8.6.1 Deposition from Aqueous Solutions	304
8.6.2 Deposition of Polycrystalline Uranium Dioxide from Melts	305
8.6.3 Deposition of UO_2 Single Crystals from Melts	308
8.6.4 Reaction Mechanism and Kinetics	310
Main Reactions	310
Side Reactions	310
Kinetic Parameters	312
Overvoltage, Cathodic Passivation	312
8.6.5 Current Yield	314
8.6.6 Deposition of UO_2 on the Anode	315
Table of Conversion Factors	316
