DETAILED CONTENTS

PREFACE	xvi
1 INTRODUCTORY CONCEPTS	1
1.1 Problems Faced by People with Hearing Impairment.....	2
1.1.1 Decreased audibility	2
1.1.2 Decreased dynamic range.....	2
1.1.3 Decreased frequency resolution.....	3
1.1.4 Decreased temporal resolution.....	5
1.1.5 Physiological origins of hearing loss.....	5
1.1.6 Deficits in combination.....	6
1.2 Acoustic Measurements.....	8
1.2.1 Basic physical measures	8
1.2.2 Linear amplifiers and gain	9
1.2.3 Saturation sound pressure level	10
1.2.4 Couplers and real ears	11
1.3 Types of Hearing Aids.....	11
1.4 Historical Perspective	14
1.4.1 The acoustic era	15
1.4.2 The carbon era	15
1.4.3 The vacuum tube era.....	16
1.4.4 The transistor and integrated circuit era	17
1.4.5 The digital era.....	18
1.4.6 The wireless era	19
2 HEARING AID COMPONENTS	20
2.1 Block Diagrams.....	21
2.2 Microphones	22
2.2.1 Principle of operation.....	23
2.2.2 Frequency response of microphones	23
2.2.3 Microphone imperfections	24
2.2.4 Directional microphones	26
2.2.5 Microphone location	28
2.3 Amplifiers	28
2.3.1 Amplifier technology	28
2.3.2 Peak clipping and distortion.....	29
2.3.3 Compression amplifiers	30
2.4 Digital Circuits.....	31
2.4.1 Analog-to-digital converters	31
2.4.2 Digital signal processors.....	33
2.4.3 Hard-wired digital processing	33
2.4.4 General arithmetic digital processing	34
2.4.5 Sequential processing, block processing, and hearing aid delay	35
2.4.6 Digital-to-analog converters.....	36

2.4.7	Specifications for digital hearing aids	36
2.4.8	Digital versus analog hearing aids.....	38
2.5	Filters, Tone Controls and Filter Structures	38
2.5.1	Filters	38
2.5.2	Tone Controls.....	39
2.5.3	Filter structures.....	39
2.6	Receivers	41
2.6.1	Principle of operation	41
2.6.2	Frequency response of receivers	41
2.7	Acoustic Dampers.....	42
2.8	Telecoils	43
2.9	Audio (Electrical) Input.....	44
2.10	Remote Controls.....	44
2.11	Bone Conductors	46
2.12	Batteries	46
2.12.1	Principle of operation.....	46
2.12.2	Operating voltage	47
2.12.3	Capacity and physical size	47
2.12.4	Rechargeable batteries	49
2.13	Concluding Comments	49
3	HEARING AID SYSTEMS	50
3.1	Custom and Modular Construction	51
3.1.1	Custom hearing aids.....	51
3.1.2	Modular hearing aids	52
3.1.3	Semi-modular, semi-custom hearing aids	52
3.1.4	Hearing aid reliability	53
3.2	Linked Bilateral Hearing Aids.....	53
3.3	Programming the Hearing Aid.....	54
3.3.1	Programmers, interfaces, and software.....	54
3.3.2	Multi-memory or multi-program hearing aids.....	55
3.3.3	Paired comparisons.....	55
3.4	Remote Sensing and Transmitting Hearing Aid Systems	56
3.5	Induction Loops	56
3.5.1	Field uniformity and direction.....	57
3.5.2	Magnetic field strength	58
3.5.3	Loop frequency response	59
3.6	Radio-frequency Transmission	62
3.6.1	Frequency modulation	62
3.6.2	Digital modulation techniques.....	64
3.6.3	Coupling to the hearing aid.....	65
3.6.4	Combining wireless and local microphones	66
3.7	Infra-red Transmission	69
3.8	Classroom Sound-field Amplification	69
3.9	Comparative Strengths and Weaknesses of Magnetic Loops, Radio-frequency Wireless Systems, Infra-red, and Sound-field Amplification Systems	71
3.10	Assistive Listening Devices.....	73

3.11	Connectivity and Convergence	75
3.11.1	Connecting electronic devices to hearing aids.....	75
3.11.2	Convergence.....	77
3.11.3	Interference between mobile phones and hearing aids	78
3.12	Concluding Comments	80
4	ELECTROACOUSTIC PERFORMANCE AND MEASUREMENT	81
4.1	Measuring Hearing Aids in Couplers and Ear Simulators.....	82
4.1.1	Couplers and ear simulators.....	82
4.1.2	Test boxes.....	85
4.1.3	Measurement signals	87
4.1.4	Gain-frequency response and OSPL90-frequency response	88
4.1.5	Input-output functions	90
4.1.6	Distortion	92
4.1.7	Internal noise	93
4.1.8	Magnetic response	94
4.1.9	ANSI, ISO and IEC standards	95
4.2	Real-Ear-to-Coupler-Difference (RECD)	97
4.2.1	Factors affecting RECD	97
4.2.2	Measurement of RECD	99
4.2.3	RECD and REDD	101
4.3	Real-Ear Aided Gain (REAG)	101
4.3.1	Positioning the probe for REAG measurement	103
4.3.2	Relationship between REAG, coupler gain and ear simulator gain.....	105
4.3.3	Detecting incorrect aided measurements	106
4.4	Insertion Gain	107
4.4.1	Positioning the probe for insertion gain measurement	108
4.4.2	Relationship between insertion gain, coupler gain and ear simulator gain.....	109
4.4.3	Detecting incorrect insertion gain measurements	111
4.4.4	Accuracy of insertion gain measurements.....	111
4.5	Practical Issues in Real-Ear Testing	111
4.5.1	Probe calibration	111
4.5.2	Control microphones	112
4.5.3	Effects of wax	113
4.5.4	Contamination by background noise	113
4.5.5	Hearing aid saturation	114
4.5.6	Loudspeaker orientation.....	114
4.5.7	Measurement signal characteristics	115
4.6	Aided Threshold Testing and Functional Gain	116
4.7	Feedback in Hearing Aids.....	118
4.7.1	The feedback mechanism.....	118
4.7.2	Effects of feedback on sound quality.....	119
4.7.3	Probe-tube measurements and feedback	120
4.8	Troubleshooting Faulty Hearing Aids.....	121
4.9	Concluding Comments	126

5	HEARING AID EARMOLDS, EARSHELLS AND COUPLING SYSTEMS	127
5.1	Earmold, Earshell and Canal Fitting Physical Styles	130
5.1.1	BTE earmold styles	130
5.1.2	ITE, ITC, and CIC earshell styles	132
5.2	Overview of Earmold, Earshell and Canal Fitting Acoustics	134
5.3	Venting	134
5.3.1	Effects of vents on hearing aid gain and OSPL90	136
5.3.2	Venting and the occlusion effect	140
5.3.3	Effects of vents and leaks on feedback oscillations	144
5.3.4	Interaction of vents with digital signal processing algorithms	146
5.3.5	Parallel versus Y (or diagonal) vents	147
5.3.6	Open-canal fittings in summary	148
5.4	The sound bore: tubing, horns and constrictions	149
5.4.1	Acoustic horns and constrictions	151
5.4.2	Tubing insertion depth	154
5.5	Dampers	155
5.6	Specific Tubing, Damping and Venting Configurations	156
5.7	Procedure for Selecting Earmold and Earshell Acoustics	156
5.8	Ear Impressions	158
5.8.1	Standard ear impression techniques	158
5.8.2	Ear impression techniques for CICs and high-gain hearing aids	160
5.8.3	Ear impression materials	162
5.9	Earmolds and Earshells	163
5.9.1	Earmold and earshell construction	163
5.9.2	Materials for earmolds and earshells	164
5.9.3	Instant earmolds and hearing aids	167
5.9.4	Modifying and repairing earmolds and earshells	167
5.10	Concluding Comments	169
6	COMPRESSION SYSTEMS IN HEARING AIDS	170
6.1	Compression's Major Role: Reducing the Signal's Dynamic Range	171
6.2	Basic Characteristics of a Compressor	172
6.2.1	Dynamic compression characteristics: attack and release times	172
6.2.2	Static compression characteristics	175
6.2.3	Input and output control	178
6.2.4	Multichannel compression	179
6.3	Rationales for Use of Compression	180
6.3.1	Avoiding discomfort, distortion and damage	180
6.3.2	Reducing inter-syllabic and inter-phonemic intensity differences	181
6.3.3	Reducing differences in long-term level	182
6.3.4	Increasing sound comfort	183
6.3.5	Normalizing loudness	184
6.3.6	Maximizing intelligibility	186
6.3.7	Reducing noise	186
6.3.8	Empirical approaches	189
6.4	Combinations of Compressors in Hearing Aids	190
6.5	Benefits and Disadvantages of Different Compression Systems	190

6.5.1	Compression relative to linear amplification	191
6.5.2	The benefits of multichannel relative to single-channel compression.....	194
6.5.3	Slow versus fast compression	196
6.6	Concluding Comments	197
7	DIRECTIONAL MICROPHONES AND ARRAYS	198
7.1	Directional Microphone Technology.....	199
7.1.1	First-order subtractive directional microphones.....	199
7.1.2	Additive directional arrays.....	204
7.1.3	Complex directional arrays	206
7.1.4	Bilateral directivity.....	213
7.2	Quantifying Directivity.....	215
7.2.1	2D and 3D directivity index.....	215
7.2.2	AI-DI.....	217
7.3	Directional Benefit.....	218
7.3.1	Impact of listening environment.....	219
7.3.2	Objective benefit in the clinic and self reported benefit in real life.....	221
7.3.3	Interaction of directivity with other technologies	222
7.3.4	Disadvantages of directivity	223
7.3.5	Candidates for directional microphones	223
7.3.6	Evaluation of directional microphones in the clinic	224
7.4	Concluding comments	225
8	ADVANCED SIGNAL PROCESSING SCHEMES	226
8.1	Adaptive Noise Reduction.....	227
8.1.1	Adaptive noise reduction technology	227
8.1.2	Adaptive noise reduction benefits.....	232
8.1.3	Impulse noise reduction.....	233
8.2	Feedback Reduction.....	234
8.2.1	Feedback reduction by gain-frequency response control.....	234
8.2.2	Feedback reduction by phase control.....	235
8.2.3	Feedback reduction by feedback path cancellation.....	236
8.2.4	Feedback reduction by frequency shifting	238
8.2.5	Feedback reduction systems in combination.....	238
8.3	Frequency Lowering	239
8.3.1	Frequency lowering rules	239
8.3.2	Frequency lowering techniques.....	240
8.3.3	Commercially available frequency lowering schemes	242
8.3.4	Frequency lowering, speech intelligibility and candidacy	242
8.4	Speech Cue Enhancement.....	245
8.5	Other Signal Processing Schemes	247
8.6	Concluding Comments	253
9	ASSESSING CANDIDACY FOR HEARING AIDS	255
9.1	Factors Affecting the Lower Limit of Aidable Hearing Loss.....	258
9.1.1	Attitude and motivation	258
9.1.2	Pure tone loss and audiogram configuration	261

9.1.3	Speech identification ability	263
9.1.4	Self reported disability	263
9.1.5	Acceptance of noise	264
9.1.6	Listening environment, needs and expectations	265
9.1.7	Stigma and cosmetic concerns	268
9.1.8	Manipulation and management	269
9.1.9	Age	270
9.1.10	Personality	271
9.1.11	Central auditory processing disorders	272
9.1.12	Tinnitus	272
9.1.13	Factors in combination	273
9.1.14	Counseling the unwilling patient: some examples	274
9.2	The Upper Limit of Aidable Hearing Loss	278
9.2.1	Poor speech identification ability	278
9.2.2	Hearing aids or cochlear implants?	279
9.2.3	Hearing aids and cochlear implants: bimodal and hybrid / electroacoustic stimulation	280
9.2.4	Hearing aids or tactile aids?	283
9.3	Medically Related Contra-indications to Hearing Aid Fitting	284
9.4	Concluding Comments	284
10	PRESCRIBING HEARING AID AMPLIFICATION	286
10.1	General Concepts Behind a Prescriptive Approach and a Brief History	287
10.2	Gain and Frequency Response Prescription for Linear Amplification	290
10.2.1	POGO	290
10.2.2	NAL	290
10.2.3	DSL	292
10.2.4	Examples and comparisons: POGO II, NAL-RP and DSL	294
10.3	Difficult Issues in Prescription	297
10.3.1	Acclimatization and adaptation to gain and frequency response	297
10.3.2	Preferred loudness	298
10.3.3	Dead regions	298
10.3.4	Severe hearing loss, effective audibility and high-frequency amplification	301
10.3.5	Prescribing compression thresholds	304
10.3.6	Need for accuracy in prescription	306
10.4	Gain, Frequency Response, and Input-output Functions for Non-linear Amplification	307
10.4.1	LGOB	308
10.4.2	IHAFF/Contour	308
10.4.3	ScalAdapt	309
10.4.4	FIG6	310
10.4.5	DSL[i/o] and DSLm[i/o]	311
10.4.6	NAL-NL1 and NAL-NL2	313
10.4.7	CAMREST, CAMEQ and CAMEQ2-HF	315
10.4.8	Comparison of procedures	315
10.5	Allowing for Conductive and Mixed Hearing Losses	319
10.6	Selecting Options for Multi-memory Hearing Aids	321
10.6.1	Music programs	322
10.6.2	Candidates for multi-memory hearing aids	322

10.7	Prescribing OSPL90	323
10.7.1	General principles: avoiding discomfort, damage and distortion	323
10.7.2	Type of limiting: compression or peak clipping	324
10.7.3	OSPL90 prescription procedures	324
10.7.4	Prescribing OSPL90 at different frequencies.....	329
10.7.5	OSPL90 for non-linear hearing aids	331
10.7.6	OSPL90 for conductive and mixed losses.....	331
10.8	Excessive Amplification and Subsequent Hearing Loss	332
10.9	Concluding Comments	334
11	SELECTING, ADJUSTING AND VERIFYING HEARING AIDS	336
11.1	Selecting Hearing Aid Style: CIC, ITC, ITE, BTE, Spectacle Aid, or Body Aid.....	337
11.2	Selecting Hearing Aid Features	342
11.3	Hearing Aid Selection and Adjustment.....	346
11.4	Allowing for Individual Ear Size and Shape in the Coupler Prescription	349
11.5	Verifying and Achieving the Prescribed Real-ear Response.....	350
11.6	Verifying Signal Processing Features	351
11.7	Evaluating and Fine-tuning OSPL90.....	352
11.8	Concluding Comments.....	353
12	PROBLEM SOLVING AND FINE-TUNING	354
12.1	Solving Common Problems	355
12.1.1	Management difficulties.....	355
12.1.2	Earmold or earshell discomfort.....	356
12.1.3	Poor earmold or earshell retention	357
12.1.4	Own voice quality and occlusion	357
12.1.5	Feedback oscillation	358
12.1.6	Tonal quality.....	360
12.1.7	Noise, clarity, and loudness.....	362
12.2	Systematic Fine-tuning Procedures	365
12.2.1	Paired comparisons	365
12.2.2	Absolute rating of sound quality	366
12.2.3	Systematic selection by paired comparisons.....	367
12.2.4	Adaptive parameter adjustment by paired comparisons.....	369
12.2.5	Adaptive fine-tuning by absolute rating of quality	370
12.2.6	Fine-tuning at home with multi-memory or trainable hearing aids.....	372
12.3	Concluding Comments: Fine-tuning in Perspective.....	372
13	PATIENT EDUCATION AND COUNSELING FOR HEARING AID WEARERS	374
13.1	Understanding Hearing Loss	376
13.2	Acquiring a Hearing Aid	377
13.3	Using Hearing Aids	378
13.4	Adjusting to New Experiences with Sound and Hearing Aids.....	379
13.5	Care of Hearing Aids.....	383
13.6	Hearing Strategies	384
13.6.1	Observing the talker and surroundings.....	384
13.6.2	Manipulating social interactions.....	385

13.6.3	Manipulating the environment	387
13.6.4	Teaching hearing strategies.....	388
13.7	Involving Families and Friends.	389
13.8	Auditory Training.....	390
13.9	Computer-Based Auditory Training at Home	392
13.10	Avoiding Hearing Aid-Induced Hearing Loss.....	392
13.11	Assistive Listening Devices	393
13.12	Counseling Support.....	393
13.13	Interacting with Different Personality Styles	393
13.14	Structuring Appointments	395
13.14.1	The assessment appointment(s)	396
13.14.2	The fitting appointment(s).....	396
13.14.3	The follow-up appointment(s).....	397
13.14.4	The power of groups.....	398
13.15	Concluding Comments	401
14	ASSESSING THE OUTCOMES OF HEARING REHABILITATION	403
14.1	Outcome Domains	404
14.2	Speech Understanding Tests.....	405
14.2.1	Limitations of speech tests to assess benefits	405
14.2.2	Role of speech testing in evaluating benefit	406
14.3	Self-report Questionnaires for Assessing Benefit	407
14.3.1	Questionnaire methodology.....	407
14.3.2	Practical self-report measures	411
14.4	Meeting Needs and Goals	414
14.5	Assessing Usage, Problems, and Satisfaction	417
14.6	The International Outcomes Inventory for Hearing Aids (IOI-HA).....	421
14.7	Changes in Outcomes with Time after Fitting.....	423
14.8	Impact of Hearing Loss and Hearing Aids on Health-Related Quality of Life	425
14.8.1	Effect of hearing loss on health-related quality of life	425
14.8.2	Effect of hearing aids on health-related quality of life	425
14.9	Concluding Comments	428
15	BINAURAL AND BILATERAL CONSIDERATIONS IN HEARING AID FITTING	430
15.1	Binaural Effects in Localization	432
15.1.1	Localization cues in normal hearing	432
15.1.2	Effects of hearing loss on localization.....	435
15.2	Binaural Effects in Detection and Recognition.....	436
15.2.1	Head diffraction effects.....	437
15.2.2	Binaural squelch in noise.....	438
15.2.3	Binaural redundancy.....	440
15.2.4	Binaural loudness summation	441
15.3	Advantages of Bilateral Fittings	442
15.3.1	Speech intelligibility	442
15.3.2	Localization.....	444
15.3.3	Sound quality.....	448

15.3.4	Avoiding late-onset auditory deprivation	448
15.3.5	Suppression of tinnitus	450
15.3.6	Miscellaneous advantages	450
15.4	Disadvantages of Bilateral Fittings	450
15.4.1	Cost	450
15.4.2	Binaural interference	451
15.4.3	Self-image	453
15.4.4	Miscellaneous disadvantages.....	453
15.5	Tests of Bilateral Advantage	454
15.5.1	Bias in choosing the reference ear for the unilateral condition	455
15.5.2	The sensitivity of speech tests for assessing bilateral advantage	455
15.5.3	Role for speech tests in assessing bilateral advantage.....	456
15.5.4	Localization tests	458
15.6	Fitting Asymmetrical Hearing Losses.....	458
15.6.1	Bilateral versus unilateral fittings for asymmetrical losses	458
15.6.2	Better ear versus poorer ear for unilateral fittings	460
15.6.3	Alternatives: FM and CROS	462
15.7	Deciding on Bilateral versus Unilateral Fittings	462
15.8	Effect of Bilateral versus Unilateral Fitting on Electroacoustic Prescriptions.....	466
15.9	Concluding Comments	467
16	SPECIAL HEARING AID ISSUES FOR CHILDREN	469
16.1	Sensory Experience, Sensory Deprivation, and Candidacy for Hearing Aids.....	470
16.1.1	Binaural stimulation	470
16.1.2	Unilateral loss	471
16.1.3	Slight and mild hearing loss.....	473
16.1.4	Cochlear implantation.....	473
16.1.5	Auditory neuropathy spectrum disorder.....	474
16.2	Assessment of Hearing Loss	475
16.2.1	Frequency-specific and ear-specific assessment.....	475
16.2.2	Small ears and calibration issues	477
16.2.3	Auditory processing disorders	478
16.2.4	Miscellaneous issues in assessment.....	479
16.3	Hearing Aid and Earmold Styles	479
16.3.1	Hearing aid style	479
16.3.2	Earmolds	480
16.4	Prescribing Amplification for Children	481
16.4.1	Speech identification ability and amplification requirements	481
16.4.2	Threshold-based versus loudness-based procedures.....	485
16.4.3	Allowing for small ear canals	485
16.4.4	Signal processing features	490
16.4.5	Assistive listening devices (ALDs).....	493
16.5	Verifying Real-Ear Performance	494
16.6	Evaluating Aided Performance	495
16.6.1	Speech tests.....	495
16.6.2	Paired-comparison tests.....	496
16.6.3	Evaluation of discomfort	497

16.6.4	Subjective report measures	498
16.6.5	Articulation Index or Speech Intelligibility Index (SII)	500
16.6.6	Evoked cortical responses	502
16.6.7	Speech production and language acquisition	505
16.7	Helping Parents	505
16.8	Hearing Habilitation Goals	507
16.8.1	Goals and strategies for infants	508
16.8.2	Goals and strategies for toddlers	509
16.8.3	Goals and strategies for pre-schoolers	509
16.8.4	Goals and strategies for primary school children	510
16.9	Teenagers and Cosmetic Concerns	510
16.10	Safety Issues	511
16.11	Concluding comments	512
17	CROS, BONE-CONDUCTION, AND IMPLANTED HEARING AIDS	513
17.1	CROS Hearing Aids	514
17.1.1	Simple CROS aids	514
17.1.2	Bilateral CROS (BICROS) aids	518
17.1.3	Stereo CROS (CRIS-CROS) aids	519
17.1.4	Transcranial CROS aids	519
17.2	Bone-conduction Hearing Aids	520
17.2.1	Applications of bone-conduction hearing aids	520
17.2.2	Bone-conduction hearing aid output capabilities	521
17.2.3	Prescribing, adjusting and verifying electroacoustic characteristics for bone-conduction hearing aids	522
17.2.4	Disadvantages of bone-conduction hearing aids	525
17.3	Bone-Anchored Hearing Aids	526
17.3.1	BAHAs for unilateral conductive or mixed hearing loss	527
17.3.2	Bilateral BAHAs for bilateral conductive or mixed hearing loss	528
17.3.3	BAHAs for single-sided sensorineural deafness	528
17.3.4	Complications with BAHAs	529
17.4	Middle-ear Implantable Hearing Aids	529
17.4.1	Output transducers	530
17.4.2	Microphones	531
17.4.3	Complete systems	531
17.4.4	Candidacy and benefits	534
17.4.5	Complications with middle-ear implants	535
