<b>Abstract</b>	<b>iii</b>
<b>Zusammenfassung</b>	<b>v</b>
<b>1. Introduction</b>	<b>1</b>
1.1. Motivation . . . . .	1
1.2. Goals of the thesis . . . . .	4
1.3. Structure of the thesis . . . . .	6
 <b>I Analytical complexity of solution methods in     Convex Optimization</b>	 <b>9</b>
<b>2. Convex Optimization and computational tractability</b>	<b>11</b>
2.1. Mathematical formulation of an optimization problem . . . . .	12
2.2. What does computational tractability mean? . . . . .	13
2.3. What is a convex optimization problem? . . . . .	18
2.3.1. Convexity and other properties of the feasible set . . . . .	18
2.3.2. Objective function: convexity and other properties . . . . .	20
2.4. Convex optimization problems are polynomially solvable! . . . . .	26
2.5. Bregman distances . . . . .	28
 <b>3. Black-Box optimization methods</b>	 <b>35</b>
3.1. Black-Box Optimization . . . . .	38

3.2. Dual Averaging schemes . . . . .	39
3.3. Primal-Dual Subgradient methods . . . . .	43
3.3.1. Exact subgradients . . . . .	43
3.3.2. Stochastic subgradients . . . . .	45
3.3.3. How fast can Subgradient methods be? . . . . .	48
3.4. Optimal First-Order methods . . . . .	49
<b>4. Solution methods in Structural Optimization</b>	<b>55</b>
4.1. First-Order methods in Structural Optimization . . . . .	56
4.1.1. Smoothing Techniques . . . . .	57
4.1.2. Mirror-Prox methods . . . . .	62
4.2. Interior-Point methods . . . . .	70
 <b>II A new perspective on the Hedge algorithm</b>	 <b>75</b>
<b>5. Hedge algorithm and Dual Averaging schemes</b>	<b>77</b>
5.1. The Hedge algorithm . . . . .	79
5.2. The Hedge algorithm is a Dual Averaging method . . . . .	81
5.2.1. Optimal Hedge algorithm . . . . .	82
5.2.2. Optimal Time-Independent Hedge algorithm . . . . .	83
5.2.3. Optimal Aggressive Hedge algorithm . . . . .	84
5.3. Numerical results . . . . .	85
 <b>III Approximately solving large-scale semidefinite optimization problems</b>	 <b>89</b>
<b>6. An introduction to large-scale Semidefinite Optimization</b>	<b>91</b>
6.1. Some structured semidefinite optimization problems . . . . .	92
6.2. Interior-Point methods in Semidefinite Optimization . . . . .	95
<b>7. A matrix Hedge algorithm in Semidefinite Optimization</b>	<b>101</b>
7.1. The Matrix Multiplicative Weights Update scheme . . . . .	103
7.2. Application in Semidefinite Optimization . . . . .	105
7.2.1. Replacement by a cascade of feasibility problems . . . . .	106
7.2.2. Arora and Kale's implementation of the feasibility oracle . . . . .	107
<b>8. From SDPs to matrix saddle-point problems</b>	<b>115</b>
8.1. Binary Search based on matrix saddle-point problems . . . . .	116
8.2. An alternative problem transformation . . . . .	118

8.3. Solving the primal or the dual problem? . . . . .	122
8.3.1. Mirror-Descent schemes applied to the primal problem . . . . .	123
8.3.2. Mirror-Descent methods applied to the dual problem . . . . .	124
8.4. Interior-Point methods for matrix saddle-point problems . . . . .	127
<b>9. Smoothing Techniques for matrix saddle-point problems</b>	<b>129</b>
9.1. Smooth approximation of the primal and of the dual . . . . .	130
9.2. Applying an optimal First-Order method . . . . .	132
<b>10. Applying randomized Mirror-Prox methods</b>	<b>135</b>
10.1. Setup of the algorithm . . . . .	136
10.2. Complexity of deterministic Mirror-Prox methods . . . . .	138
10.3. Randomized Mirror-Prox methods . . . . .	139
10.3.1. Randomization strategy . . . . .	140
10.3.2. Complexity of randomized Mirror-Prox schemes . . . . .	142
<b>11. Numerical results</b>	<b>149</b>
11.1. Construction of the problem instances . . . . .	149
11.2. Implementation details of the methods . . . . .	150
11.2.1. Interior-Point methods and randomized Mirror-Descent schemes . . . . .	150
11.2.2. (Accelerated) Smoothing Techniques . . . . .	151
11.2.3. (Randomized) Mirror-Prox methods . . . . .	152
11.3. Comparison of the methods . . . . .	154
11.4. Solving very large-scale problems . . . . .	158
<b>12. Conclusions and outlook</b>	<b>161</b>
12.1. Conclusions . . . . .	161
12.2. Outlook . . . . .	164
<b>A. Regularity of norms</b>	<b>165</b>
<b>B. Proofs</b>	<b>169</b>
B.1. Proof of Theorem 3.5 . . . . .	169
B.2. Proof of Theorem 7.2 . . . . .	172
B.3. Proof of Proposition 10.1 . . . . .	173
<b>Bibliography</b>	<b>183</b>
