

Table of Contents

1 Anatomy 1

Topographic Anatomy for Microsurgical Approaches to Intrinsic Brain Tumors	2	Divisions of the Cerebellum	81
Introduction	2	Cerebellar Lobes and Lobules	82
Historical Sketch of Brain Architecture	3	Cerebellar Hemispheric Borders and Surfaces	84
Embryology	8	Cerebellar Fissures and Sulci	86
Neuroembryogenesis	8	The White Matter of the Cerebellum	88
Neurogenesis	12	The Predilective Location of Intrinsic Cerebellar Tumors and Surgical Planning	93
Myelinization	13	Vascular Anatomy	95
Divisions of the Brain (Encephalon)	14	Arteries	95
Cerebrum (Telencephalon)	14	Arteries within Sulci	98
The Borders of the Telencephalon	16	Blood Supply of Cerebral and Cerebellar Tumors	99
The Concept of Cerebral Lobes	16	Arterial Supply of Central Nuclei and the Internal Capsule	102
Anatomy of the Sulci	19	Arterial Supply of the Thalamus	103
Gyral Cerebral Anatomy	20	Arterial Supply of the Hypothalamus	104
The White Matter of the Cerebrum	25	Cerebellar Blood Supply	104
White-Matter Sublevels and Clinical Implications	39	Arterial Supply of the Midbrain	105
Topographical Anatomy of the Lobes and Gyri of the Brain	39	Arterial Supply of the Pons	106
The Central Zone of White Matter (External and Internal Capsules)	65	Arterial Supply of the Medulla	106
Summary	69	Veins	109
Infratentorial Topographic Anatomy	81	The Deep White-Matter Veins of the Brain	109
		Conclusions	114

2 Neuropathology 115

Introduction	116	Brain-Tumor Interface: Adherence and Adhesiveness	147
Historical Perspective	116	Tumor Vascularization	148
The Scope of Modern Neuropathology	116	The Numbers and Types of Tumors	149
Epidemiology and Pathogenesis	119	Location of Multicentric Tumors Within the CNS	151
Biological Activity	119	Conclusions	151
The Neurosurgeon's Viewpoint	121	The Future	153
General Considerations: Categorization of CNS Tumors	122	The Present	153
Specific Considerations	123	Cases	154
Extrinsic Cranial Tumors	123	Gyral Localization of Neocerebral Tumors	154
Growth Pattern	123	Tumors of the Limbic Lobe	161
Intrinsic Tumors	125	Rare Localizations	171
Predilection	125	Rentrolenticular Tumors	173
initial Growth Pattern	127	Diffusely Growing Gliomas	174
Localization	129	Benign Tumor Behavior	180
Tumor Infiltration	144	Multiple Tumors	184
Peritumoral Changes	146	Difficult Histology	188
Tumor Demarcation	146		

3 Neuroradiology

193

Historical Review	194
Plain Radiographs	194
Contrast Encephalography	194
Cerebral Angiography	194
Neuroimaging: Computed Tomography	194
Neuroimaging: Magnetic Resonance Imaging	195
Isotope Brain Scanning	196
Functional Neuroimaging	196
Xenon CT	196
Emission Computed Tomography	196
Positron Emission Tomography	196
Single Photon Emission Computed Tomography	197
Current Trends	197
Magnetic Encephalography	197
Magnetic Resonance Angiography	197
Echo-planar MRI	197
Current Neuroimaging with CT and MRI	197
Comparison of CT with MRI	198
MR Image Selection	198
Contrast MRI	199
Usefulness of MRI in Distinguishing Vascular Mass Lesions from Tumors	199
Functional Studies	199
Failure of MRI to Detail Surgical Pathophysiology	199
Future Correlation of MRI with Functional Imaging ...	200
Recent MRI Improvements	200
The Application of Neuroimaging Capabilities to CNS Tumors	200
Lesion Morphology (Structural Changes)	200
Lesion Location (Topography)	200

Other Diseases	201
Ventricular Abnormalities	201
Postoperative Morphological Changes	201
Functional Changes	202
Difficulties and Limitations of Neuroimaging	202
Topographic Difficulties	203
Peritumoral Changes	203
Cleavage	204
Detailed Lesion Reconstruction	207
Summary	207
Conclusions	209
Cases	209
Diagnostic Difficulties between Intrinsic and Extrinsic Tumors in the Parachiasmatic Area	209
Differential Diagnostic Difficulties between Meningiomas and Glioblastomas	217
Difficulties with the Origin of Intraventricular Tumors	220
Difficulties with Tumors in Parapineal Areas, their Precise Location, and Tumor Type	221
Difficulties with Tumor Type in the Cerebropontine Angle	225
Difficulties with Intrinsic and Extrinsic Lesions in the Infratentorial Area	228
Radiological Diagnostic Difficulties between Neoplastic, Infective, Degenerative, and Traumatic Disease Processes	231
Problems Associated with Perilesional Changes	235
Edema	243
White Matter Changes	245

4 Neurophysiology

247

Introduction	248
Physiological Subsystems	248
Neural and Glial Parenchymal Systems	250
Cerebral Cortex	250
Symptoms and Signs of Cerebral Tumors	251
Localization	251
Herniations	251
Pathophysiology: Cerebral Edema	255
Cerebrospinal Fluid System	256
Protective Barriers	258
The Intracranial Buffering System	258
Intracranial Pressure	259
ICP Monitoring	259
Normal ICP	259
Elevated ICP	260
Cerebrovascular System	262
Introduction	262
Arterial Supply	263
Venous Drainage	263
Cerebral Blood Flow	263

Autoregulation	263
Pathophysiology	265
Thresholds	265
Tumor Effects on the Cerebrovascular System	265
Circumventricular Organ System	265
The Subfornical Organ	266
The Organum Vasculosum of the Lamina terminalis	266
The Area Postrema	267
Pathophysiology	267
Neuroendocrine System	267
The Hypothalamus	267
The Pituitary Gland	270
The Pineal Gland	270
Pathophysiology of the Pineal Gland	271
Pathophysiology of the Neuroendocrine System as a Whole ..	271
Neurotransmitters	272
Central Nervous and Immune Systems	273
Immune Cells	273
Immunoregulators	273
Pathophysiology and Future Implications	274

Pathophysiology of CNS Disease Processes	274	Final Remarks	278
Interactions Between Neurological Diseases		Conclusions	278
and Physiological Systems	274	Cases	280
Tumors as Dynamic Systems	277	Effects of Chronic or Subacute Growth	301

5 Clinical Considerations – Operability 317

General Remarks	318	Applied Microsurgery for Extrinsic and Intrinsic Tumors ...	325
Introduction	318	Extrinsic Tumors	325
The Era of Neuroimaging	318	Sphenopetroclival Meningiomas	326
The Traditional History and Physical Examination	318	Chordomas	330
The Explosion of Neuroclinical Technology and its		Epidermoid	331
Impact on Clinical Neurosurgery	318	Optic Gliomas	332
The Clinical Decision-Making Process	319	Hypothalamic Astrocytoma	334
The Decision to Operate	320	Large Insular Oligodendroglioma	335
Symptomatology	320	Parietal Astrocytomas	335
Tumor Topography – Its Impact on the Decision		Temporo-Insular Oligodendroglioma	337
to Operate	321	Limbic Gliomas	338
Recurrent Tumors	321	Intraventricular Tumors	341
Operability	321	Mesencephalic Tumors	348
Introduction	321	IV Ventricular Tumors	352
Decision-Making	321	Pontine Tumors	354
Perioperative Care	322	Inoperable Tumors	356
Current Treatment Options	323	Final Comments	359
Treatment Option	325
