1	Introduction	1
1.1	General Remarks	1
1.2	Structure and Contraction Mechanism of Muscle Fibres	2
1.3	Intrafusar Fibres of Muscle Spindles	5
1.4	Satellite Cells	6
2	When Does Differentiation of Muscle Fibres Begin and Which Properties Characterize a Fibre Type? How Can the Muscle Fibre “Know” Whether to Be Fast or Slow, and Since When?	7
3	The Difficulties and Possibilities of Classifying Muscle Fibres in Distinct Nonoverlapping Types	9
4	Cytophotometry As a Tool in Fibre Typing	15
4.1	The Basic Principle	15
4.2	The Enzymes Which Are Useful for Cytophotometrical Fibre Typing	15
4.3	The Physiological-Metabolic Muscle Fibre Typing By Cytophotometry	16
4.4	The Reliability of Cytophotometrical Data	20
5	Changes of Muscle Fibre Properties Under Physiological and Pathological Conditions . . .	23
5.1	Regional Differences	23
5.1.1	Illustration of the Problem	23
5.1.2	Experimental Basis	24
5.1.3	Changes of Fibre Properties Along the Longitudinal Axis from the Origin to the Insertion of the Muscle	25
5.1.4	Changes of Fibre Properties Along the Transversal Axis from the Superficial to the Deep Region of Muscle	31
5.1.5	Conclusions	35
5.2	Development and Ageing	35

5.2.1	Experimental Basis	38
5.2.2	Age-Dependent Changes in Fibre Type Distribution	38
5.2.3	Age-Dependent Changes of Enzyme Activities in the Different Fibre Types	38
5.2.4	Conclusions	46
5.3	Hereditary Myopathy	47
5.3.1	Experimental Basis	47
5.3.2	Changes of Enzyme Activities in the Different Fibre Types of Normal and Myopathic Muscles	48
5.3.3	Conclusions	48
5.4	Experimental Acute Hypoxia	50
5.4.1	Experimental Basis	51
5.4.2	Hypoxia-Dependent Changes of Enzyme Activities in the Different Fibre Types Without EGb 761 Pretreatment	52
5.4.3	Hypoxia-Dependent Changes of Enzyme Activities in the Different Fibre Types After EGb 761 Pretreatment	56
5.4.4	Conclusions	57
5.5	Streptozotocin-Induced Diabetes	58
5.5.1	Experimental Basis	58
5.5.2	Effects of Diabetes on Enzyme Activities in the Different Fibre Types	59
5.5.3	Effects of EGb 761 on Enzyme Activities of Diabetic Muscles	59
5.5.4	Changes in Fibre Type Distribution, Fibre Cross Areas and MHC-Isoforms of Diabetic Muscles	62
5.5.5	Conclusions	68
6	Fibre Type Transformation	69
6.1	Conclusions	71
7	FOG Fibres – The Most Adaptable Muscle Fibres	73
8	Are There Adaption Processes in – α-Motoneurons as in Muscle Fibres?	75
9	The Influence of the Muscle Type on the Properties of a Fibre Type	77
10	Correspondences Between Physiological– Metabolic Fibre Typing, ATPase-Fibre Typing and Differentiation of Myosin Isoforms	79

11	Expression of Nitric Oxide Synthase Isoforms and Protein Kinase-Cθ in the Different Fibre Types and Alterations by Diabetes and EGb 761 Pretreatment	81
11.1	Illustration of the Topic	81
11.2	Experimental Basis	82
11.3	The Correlation of NOSI, NOSIII and PKC θ to the Fibre Types	83
11.4	The Effect of STZ-Induced Diabetes and EGb 761 on the Expression of NOSI and NOSIII in the Rat Vastus Lateralis Muscle	86
11.5	NOSII Expression in Skeletal Muscle Fibres	88
11.6	Conclusions	88
12	Specific Muscle Fibre Types of Extraocular Muscles . .	91
	K. PUNKT, G. ASMUSSEN	
12.1	The Complexity of Extraocular Muscles	91
12.2	Fibre Types of Extraocular Muscles	92
12.3	Summary	94
13	Summary	95
14	Conclusions	99
