## I Methods

### 1. Patient History and Communication with the Patient 2

|                           |   |                       |   |
|---------------------------|---|-----------------------|---|
| Scheduling .....          | 2 | Patient History ..... | 3 |
| Patient Information ..... | 2 | References .....      | 7 |

### 2. Clinical Findings 9

|                         |    |                  |    |
|-------------------------|----|------------------|----|
| Visual Inspection ..... | 9  | References ..... | 13 |
| Palpation .....         | 10 |                  |    |

### 3. Mammography 14

|                                                         |    |                                                                                |    |
|---------------------------------------------------------|----|--------------------------------------------------------------------------------|----|
| Purpose, Accuracy, Possibilities, and Limitations ..... | 14 | Positioning of Breasts with Implants .....                                     | 56 |
| Indications .....                                       | 14 | Specimen Radiography .....                                                     | 59 |
| Accuracy .....                                          | 14 | Quality Factors .....                                                          | 60 |
| Screening .....                                         | 15 | Hardware Factors that Influence Image Quality .....                            | 60 |
| Problem Solving .....                                   | 15 | Influence of the Screen-Film System and Film Processing on Image Quality ..... | 62 |
| Mammographic Technique .....                            | 16 | Quality Assurance in Mammography .....                                         | 63 |
| Components of the Mammographic Imaging Technique .....  | 17 | Reporting and Documentation Findings .....                                     | 65 |
| Specific Requirements and Solutions ...                 | 26 | Clinical Findings .....                                                        | 65 |
| Image Sharpness .....                                   | 26 | Mammography Report .....                                                       | 65 |
| Contrast .....                                          | 27 | Digital Mammography .....                                                      | 71 |
| Noise .....                                             | 36 | Galactography .....                                                            | 74 |
| Radiation Dose .....                                    | 36 | Appendix: Sonographic Imaging of Lactiferous Ducts .....                       | 78 |
| Positioning and Compression .....                       | 39 | Pneumocystography .....                                                        | 81 |
| Compression .....                                       | 39 | References .....                                                               | 83 |
| Positioning for Standard Views .....                    | 41 |                                                                                |    |
| Positioning for Additional Views ...                    | 45 |                                                                                |    |
| Film Labelling .....                                    | 50 |                                                                                |    |
| Spot Compression and Magnification Technique .....      | 52 |                                                                                |    |

|                                                               |            |
|---------------------------------------------------------------|------------|
| <b>4. Sonography</b>                                          | <b>87</b>  |
| Purpose, Accuracy, Possibilities, and Limitations             | 87         |
| Diagnosing Cysts                                              | 87         |
| Differentiating Solid Lesions                                 | 87         |
| Diagnosing Carcinoma                                          | 87         |
| Younger Women                                                 | 88         |
| Screening with Sonography                                     | 88         |
| Equipment Requirements                                        | 88         |
| Transducer                                                    | 88         |
| Image Quality                                                 | 89         |
| Examination Technique                                         | 92         |
| Time-gain Compensation                                        | 92         |
| Focusing                                                      | 93         |
| Examination Technique                                         | 93         |
| Interpreting Sonographic Findings                             | 96         |
| Normal Sonographic Findings                                   | 96         |
| Focal Sonographic Lesions                                     | 97         |
| References                                                    | 102        |
| <b>5. Magnetic Resonance Imaging (MRI)</b>                    | <b>103</b> |
| Purpose, Accuracy, Possibilities, and Limitations             | 103        |
| Accuracy                                                      | 103        |
| Indications                                                   | 104        |
| Technical Requirements                                        | 106        |
| Examination Procedure                                         | 108        |
| Planning the Examination                                      | 108        |
| Examination Procedure                                         | 109        |
| Interpretation Criteria and Documentation of Findings         | 109        |
| Interpretation Criteria                                       | 110        |
