1 Strategic Planning for Operational Oceanography	1
NICHOLAS C. FLEMMING	
1.1 Introduction	1
1.2 Early developments, the comparison with meteorology	2
1.3 Origins of GOOS	4
1.4 Regional Operational Ocean Systems	8
1.5 Conclusions	15
2 Satellite Oceanography for Ocean Forecasting	19
PIERRE-YVES LE TRAON	
2.1 Overview of space oceanography	19
2.1.1 Why do we need satellites for ocean forecasting?	19
2.1.2 Space oceanography techniques	20
2.1.3 Space oceanography missions	22
2.2 Satellite Altimetry	25
2.2.1 Overview	25
2.2.2 Measurement principle	26
2.2.3 Content of altimetric measurement	26
2.2.4 Altimeter data processing	31
2.2.5 Results from T/P and ERS-1/2	33
2.2.6 Real-time aspects	35
2.3 Prospects	35
3 A Marine Information System for Ocean Predictions	37
GIUSEPPE M.R. MANZELLA, AND MFS-VOS GROUP	
3.1 Introduction	37
3.2 Marine Information System	39
3.3 Requirement for monitoring	42
3.4 Near-Real time data collection and management for Operational Oceanography	43
3.4.1 Definitions	44
3.4.2 Sampling strategies	44
3.5 The Ship of Opportunity Programme in the Mediterranean Sea	46

3.5.1	The collection/transmission system	47
3.5.2	The data collection procedures and quality control on board ..	49
3.5.3	Data quality control	50
3.5.4	Near real time data flow	50
3.6	Discussion and conclusions	50
4	A Generalization of a Sigma Coordinate Ocean Model and an Intercomparison of Model Vertical Grids	55
	GEORGE L. MELLOR, SIRPA M. HÄKKINEN, TAL EZER AND RICHARD C. PATCHEN	
4.1	Introduction	55
4.2	The Governing Equations	56
4.3	Transformation to the s-coordinate system	57
4.4	Finite Difference Equations	60
4.5	Model Strategy	61
4.6	Numerical Simulations Comparing Three Vertical Coordinate Systems	61
4.7	Errors	68
4.8	Other Grids	71
4.9	Summary	71
5	Atmospheric Data Assimilation and Quality Control	73
	ANDREW C. LORENC	
5.1	Introduction	73
5.2	What is Data Assimilation?	73
5.3	Useful prior knowledge about the atmosphere	74
5.4	Products and Uses of Assimilation	75
5.5	The Optimal Combination of Information	75
5.5.1	Bayes' Theorem for Discrete Events	75
5.5.2	Single-variable Bayesian Analysis with Gaussian probability distribution functions	76
5.5.3	One-dimensional Bayesian Analysis	78
5.5.4	Practical Analysis Methods	83
5.6	Quality Control	84
5.6.1	Why Quality Control?	84
5.6.2	Discrete Bayes Theorem Applied to Gross Observational Errors ..	85
5.6.3	Non-Gaussian Model for Observational Errors	85
5.6.4	Analysis, allowing for gross errors	86
5.6.5	What is the Best Analysis?	87
5.7	Practical Methods of Quality Control	89

5.7.1	Individual Quality Control	89
5.7.2	Simultaneous Quality Control	89
5.7.3	Variational Analysis with non-Gaussian Errors	92
5.7.4	Comparison	94
5.8	Monitoring	96
6	Sequential Data Assimilation for Nonlinear Dynamics: The Ensemble Kalman Filter	97
	GEIR EVENSEN	
6.1	Introduction	97
6.2	Extended Kalman filter	98
6.3	Ensemble Kalman Filter	100
6.3.1	Representation of error statistics	101
6.3.2	Prediction of error statistics	102
6.3.3	An analysis scheme	103
6.3.4	Summary	105
6.4	An example of the analysis scheme	106
6.5	A highly nonlinear case: the Lorenz equations	108
6.5.1	Model Equations	108
6.5.2	Discussion of cases	109
6.6	An ensemble Kalman filter for an OGCM: Preliminary results	112
6.7	Summary	116
7	Assimilation of Satellite Altimetry in Ocean Models	117
	KEITH HAINES	
7.1	Introduction	117
7.2	Physical relationships between sea level and hydrography ...	117
7.3	Convergence in twin-experiment assimilation experiments ..	122
7.4	Assimilation of TOPEX data into the OCCAM model	124
7.5	Future development priorities	128
7.6	Conclusions	129
8	Ensembles, Forecasts and Predictability	131
	ANTONIO NAVARRA	
8.1	Introduction	131
8.2	Sensitivity to initial conditions	133
8.3	The traditional paradigm	135
8.4	Finite time instabilities	137
8.5	Ensembles	139
8.6	Forecasting with ensembles	144
8.7	Conclusions	147

9	On North Atlantic Intedecadal Variability: A Stochastic View	149
	MOJIB LATIF, AXEL TIMMERMANN, ANSELM GRÖTZNER, CHRISTIAN ECKERT, REINHARD VOSS	
9.1	Introduction	149
9.2	The stochastic climate model	155
9.3	Quasi-decadal variability in the North Atlantic	160
9.4	Interdecadal variability in the North Atlantic	164
9.5	Predictability of interdecadal variability in the North Atlantic	170
9.6	Discussion	176
10	Strategy for Regional Seasonal Forecasts	179
	KIKURO MIYAKODA	
10.1	Numerical predictions in general	179
10.2	Atmospheric and oceanic general circulation models (GCMs)	180
10.2.1	Basic questions	180
10.2.2	Vertical boundary conditions	181
10.2.3	Numerical aspects of atmospheric GCMs	182
10.2.4	Surface boundary conditions of oceanic GCM (z-coordinate)	183
10.3	Nested techniques	186
10.3.1	Eta-coordinate	186
10.3.2	Horizontal grids	186
10.3.3	Potential difficulty in mesh nesting	187
10.3.4	Lateral mesh nesting	189
10.4	Nested predictions	189
10.4.1	Hurricane prediction	189
10.4.2	Eta-model prediction	191
10.5	Long-range prediction	193
10.5.1	Current state of monthly forecasts in general	193
10.5.2	Teleconnections from the tropics to the Mediterranean Sea	193
10.6	Regional long-range prediction	193
10.6.1	Limited domain 30 day predictions over complex terrain	193
10.6.2	Indian monsoon forecasts	194
10.7	Conclusions and comments	195
11	Rapid Assessment of the Coastal Ocean Environment	199
	ALLAN R. ROBINSON AND JURGEN SELLSCHOPP	
11.1	Introduction	199
11.1.1	Nowcasting and forecasting for REA	201
11.1.2	Naval REA	201
11.1.3	Civilian REA	202
11.2	Nowcasting and Forecasting the Physics	202
11.3	Implications and Applications of the Physics	204

11.3.1	Interdisciplinary Processes	204
11.3.2	Naval Applications	204
11.3.3	Fisheries and other applications	205
11.4	The REA OOPS (Ocean Observing and Prediction System) ..	206
11.4.1	The overall system and components	206
11.4.2	Data Acquisition and Management	207
11.5	Forecast System and Predictive Skill Evaluations	208
11.5.1	Regional System Validation, Calibration and Verification	208
11.5.2	REA System Validation Issues	209
11.6	Illustrations from Rapid Response Exercises 1996, 1997, 1998	210
11.6.1	Location and Characterization of Operational Regions	211
11.6.2	Methodologies: Initialization, Assimilation and Sampling	216
11.6.3	Products	219
11.6.4	Forecast evaluations	220
11.6.5	Accomplishments and implications	222
11.7	Organization, logistics and resources	223
11.7.1	Platforms and resources	223
11.7.2	Adaptive sampling and assimilation	224
11.7.3	Data fusion and communication	225
11.7.4	Simple and complex systems for special purposes	226
11.7.5	Distribution and impact of information	227
11.8	Summary, conclusions and prospects	228
12	Forecasting of Sea-level, Currents and Sea Ice in the Baltic Sea	231
	LENNART FUNKQUIST AND HANS DAHLIN	
12.1	Introduction	231
12.2	Presently used forecasting models at SMHI	232
12.3	Observations and data collection	233
12.4	Sea ice	234
12.5	Sea-level, currents, temperature and salinity	235
12.6	Wind waves	237
12.7	Post-processing	238
12.8	Conclusions	239
13	Predictions in the North Sea	243
	DAVID PRANDLE	
13.1	Introduction	243
13.1.1	Approach	243
13.1.2	What do we want to predict in shelf seas?	243
13.1.3	Shelf Seas - a global perspective	243
13.1.4	Chapter Contents	245

13.2	Forecasting dynamics and contaminant mixing in the Seas of North Western Europe	245
13.2.1	Dynamics	247
13.3	Tides, surges, waves and turbulence intensity	247
13.3.1	Temperature and Salinity	249
13.3.2	Conservative tracers, Caesium 137 and dissolved metals	251
13.3.3	Non-Conservative Tracers	252
13.3.4	Biological tracers	254
13.4	Ways forward - future developments	255
14	Forecasting Wind-driven Ocean Waves	267
	GERBRAND J. KOMEN	
14.1	Introduction	267
14.2	Phenomenology	267
14.2.1	Duration- and fetch-limited wave growth	268
14.2.2	Spectral evolution	270
14.3	The WAM model	273
14.3.1	The energy balance	275
14.3.2	Operational applications	277
14.4	Outlook	277
15	A Multivariate Reduced-order Optimal Interpolation Method and its Application to the Mediterranean Basin-scale Circulation	281
	PIERRE DE MEY AND MOUNIR BENKIRAN	
15.1	Introduction	281
15.2	Optimal Interpolation on a base of EOFs	282
15.2.1	Optimal interpolation	282
15.2.2	3-D EOFs	283
15.2.3	Vertical EOFs	286
15.2.4	Local statistical inverse	288
15.3	Assimilation of satellite altimetry in 1993-97 in the Mediterranean	289
15.3.1	How is the assimilation configured in the Mediterranean model	289
15.3.2	Assimilation of simulated XBT profiles	291
15.3.3	Assimilation of altimeter data in 1993-97	295
15.3.4	Influence of horizontal and vertical resolution in the assimilation	300
15.4	A brief summary and perspective	301

16	ENSO Predictions with Coupled Ocean Atmosphere	
	Models	307
	MARTIN FISCHER	
16.1	Introduction	307
16.2	The El Niño / Southern Oscillation Phenomenon	308
16.2.1	Description	308
16.2.2	ENSO predictability	314
16.2.3	The impact of ENSO on climate and economy	316
16.3	ENSO prediction models	319
16.3.1	Statistical ENSO prediction models	319
16.3.2	Physical ENSO prediction models	320
16.4	ENSO predictions	323
16.4.1	Initialization methods	323
16.4.2	Results of ENSO prediction experiments	326
16.5	Interpretation of ENSO forecast results	332
16.5.1	Definition of an appropriate skill measure	332
16.5.2	Correction of systematic errors	333
16.6	Summary	335
17	Toward Marine Environmental Predictions in the Mediterranean Sea Coastal Areas: A Monitoring Approach	339
	NADIA PINARDI, FRANCIS AUCLAIR, CLAUDIA CESARINI, ENCHO DEMIROV, SERENA FONDA UMANI, MICHELE GIANI, GIUSEPPE MONTANARI, PAOLO ODDO, MARINA TONANI AND MARCO ZAVATARELLI	
17.1	Introduction	339
17.2	The Mediterranean Sea shelf and coastal ecosystems	342
17.3	The coastal environmental predictions system	347
17.4	The Mediterranean large scale and Adriatic coastal scale observing systems	353
17.5	The modeling system and the data assimilation components	358
17.5.1	The large and coastal scale hydrodynamic modeling	358
17.5.2	The ecosystem modeling	366
17.6	The calibration/validation exercise in the Northern Adriatic coastal areas	369
17.7	Conclusions	373
18	Primitive Equation Modelling of Plankton Ecosystems	377
	JOHN WOODS	
18.1	Introduction	377

18.1.1 Biological Primitive Equations377

18.1.2 Individual-Based Modelling378

18.1.3 Virtual Plankton Ecosystems378

18.2 Primitive equation modelling379

18.2.1 Credibility and Verification379

18.2.2 Software sensing380

18.3 Biological primitive equations380

18.3.1 Complex Adaptive Systems380

18.3.2 Evolution381

18.4 Plankton382

18.4.1 One-dimensional modelling382

18.4.2 Zooplankton383

18.4.3 Fish larvae383

18.4.4 Reproducible laboratory experiments384

18.5 Modelling with biological primitive equations384

18.5.1 Individual-based modelling385

18.5.2 The WB food chain model386

18.6 The Lagrangian Ensemble method386

18.6.1 Particles and sub-populations388

18.6.2 Physiology and behaviour388

18.6.3 Ambient environment388

18.6.4 Initial and boundary conditions388

18.7 Virtual Plankton Ecosystems389

18.7.1 Introduction389

18.7.2 The Azores Virtual Plankton Ecosystem390

18.7.3 Environment390

18.7.4 Using audit trails: a case study391

18.7.5 Do it yourself392

18.8 Population Ecology393

18.8.1 Steele’s dilemma393

18.8.2 Demographic time series395

18.8.3 Computing demography396

18.8.4 Emergent demography396

18.9 Competition398

18.9.1 Competitive advantage399

18.9.2 Competitive exclusion400

18.9.3 Evolution by mutation400

18.9.4 Co-existence401

18.9.5 Conclusion403
