1. Introduction. By R.M. Metzger	1
References	2
 2. Transferable Empirical Nonbonded Potential Functions	
By D.E. Williams (With 2 Figures)	3
2.1 Introductory Comments	3
2.2 Empirical Nonbonded Potential Models	5
2.2.1 The Number of Adjustable Parameters and Heteroatomic Combining Laws	6
2.2.2 The Atomic Hardness Parameters, C	8
2.2.3 The Repulsion Center Shift for Bonded Hydrogen	10
2.2.4 The Net Atomic Charges, q	10
2.3 Nonbonded Interactions in Molecular Crystals	11
2.3.1 Nonbonded Crystal Lattice Energy	12
2.3.2 Mathematical Description of the Crystal Structure	13
2.3.3 The Structural Derivatives of C	16
2.3.4 The Forces and Torques as Functions of the Nonbonded Potential Parameters	18
2.4 Accelerated Convergence of Lattice Sums	19
2.4.1 Fourier Transforms of the Lattice Sum	19
2.4.2 Numerical Examples	22
2.4.3 Lattice Energy Derivatives Including Accelerated Convergence	23
2.5 Derivation of Nonbonded Potential Parameters	24
2.5.1 The Force-Fit Method	24
2.5.2 Application to Hydrocarbons	26
2.5.3 The Direct-Parameter-Fit Method	28
2.6 Extensions of the Potential Model	29
2.6.1 Molecular Rotations and Translations	29
2.6.2 Intramolecular Rotations	29
2.6.3 Thermal Corrections	30
2.6.4 Lattice Vibrations	32
2.6.5 Weak Morse Bond Potential	33

2.6.6 High-Pressure Crystal Structures	34
2.7 Appendix. Derivatives of <u>C</u>	35
References	39
 3. Conformational Analysis and Polypeptide Drug Design	
By F.A. Momany (With 21 Figures)	41
3.1 Introductory Comments	41
3.2 Computational Procedures	42
3.3 Polypeptides and Their Constituents	44
3.3.1 Modifications to the Peptide Backbone	45
a) L-Amino Acids	45
b) D-Amino Acids	47
c) C ^α -Methyl Analogs	49
d) N-Methyl Analogs	50
e) Depsipeptides	53
f) Reduced Carbonyl, Intercalated Methylene (homo), and Carbamic Acid (α-Aza) Analogs	53
3.3.2 Chain Reversals and Bend Conformations	55
a) LL, LD, and DL Bends	55
b) Depsipeptide Bend Structures	58
3.3.3 Direction Reversal: Retro, Retroenantiomers, and Retro-all- D-Peptides	59
3.3.4 Bridges: Disulfide Bonds and Carba-Analogs	61
3.3.5 Modifications of Side Chains	61
3.3.6 Abnormal Side-Chain Modifications	62
a) α,β-Dehydro Analogs	62
b) 3,4-Dehydroproline, Azetidine, and Thiazolidine	63
3.4 Application of Conformational Information to Drug Design	65
3.4.1 Example Studies: Backbone Substitutions and Conformational Effects	65
a) D-Amino Acid Substitution	66
Case I: C-terminal of Somatostatin	66
Case II: N-terminal of Luteinizing Hormone-Releasing Hormone (LHRH)	66
Case III: Substitution for Glycine in Enkephalins (EK) and LHRH	68
Case IV: L- to D-Conversion in Somatostatin	68
Case V: L- to D-Conversions in LHRH Antagonists	70
b) N-Methyl and Depsipeptide Results	71
Case VI: Eledoisin and [(N-Me)Leu ⁷]-LHRH	
c) L-, D-Combinations	73
Case VII: A Conformational Approach to the Design of Growth Hormone Agonist	73

3.5 Conclusions	75
References	76
 4. Cohesion and Ionicity in Organic Semiconductors and Metals	
By R.M. Metzger (With 7 Figures)	80
4.1 Introductory Comments	80
4.2 Crystal Cohesive Energies: General Theory	82
4.2.1 Löwdin's Theory	82
4.2.2 Madelung Energy	85
4.2.3 Charge-Dipole and Dipolar Energies	86
4.2.4 Polarization and Dispersion Energies	89
4.3 Born-Haber Cycles and Criteria for Ionicity	90
4.3.1 Born-Haber Cycles	90
4.3.2 Criteria for Ionicity	93
4.4 Lattice Energy Calculations	95
4.4.1 Lattice Energy Algorithms	95
4.4.2 Madelung Energy-Uniform Lattice	96
4.4.3 Madelung Energy-Wigner Lattice	99
4.4.4 Beyond the Madelung Energy	101
References	104
 5. Slipped Versus Eclipsed Stacking of Tetrathiafulvalene (TTF) and Tetracyanoquinodimethane (TCNQ) Dimers	
By B.D. Silverman (With 25 Figures)	108
5.1 Introductory Comments	108
5.2 Geometry of Donor-Acceptor π Complexes: Slipped Versus Eclipsed Stacking	109
5.3 Molecular-Orbital Calculations	111
5.3.1 Extended-Hückel Calculations	111
5.3.2 CNDO/2 Calculations	116
5.4 Interactions Between Closed-Shell Neutral TTF Molecules: Hard-Sphere Packing and Atom-Atom Potentials in Crystalline TTF	120
5.5 Density-Functional Calculation: Neutral TTF Dimer	124
5.6 Density-Functional Calculation: Open Shell TTF Dimer	132
5.7 Conclusions	134
