1 Soybean

G.-J. Lee, X. Wu, J. G. Shannon, D. A. Sleper, H. T. Nguyen	1
1.1 Introduction	1
1.2 Construction of Soybean Genetic Maps	7
1.2.1 Soybean Genetic Map	7
1.2.2 First Generation of Soybean Maps Constructed Based on a Single Population	7
1.2.3 Integrated Soybean Genetic Maps	9
1.3 Mapping of Genes in Soybean	10
1.3.1 Resistant Genes to Soybean Diseases	10
1.3.2 Genes for Herbicide Resistance	20
1.3.3 Nodulation Genes	20
1.3.4 Genes for Growth Habit, Flowering, and Morphology	20
1.3.5 Soybean Sterility Genes	22
1.3.6 Genes for Mineral Toxicity or Deficiency	22
1.3.7 Genes for Soybean Pigmentation	23
1.3.8 Genes for Fatty Acid Composition	23
1.4 QTL Mapping in Soybean	24
1.4.1 Pest Resistance	24
1.4.2 Tolerance to Abiotic Stresses	36
1.4.3 Growth and Development Responses	37
1.4.4 Seed Composition	38
1.4.5 Yield-Related Traits	38
1.5 Marker-Assisted Breeding in Soybean	40
1.5.1 Advantages	40
1.5.2 Marker Systems	40
1.5.3 Marker-Assisted Introgression	41
1.5.4 Gene Pyramiding	42
1.6 Progress in Map-Based Cloning, Transformation, and Other Candidate Gene Approaches in Soybean	42
1.6.1 Map-Based Cloning	42
1.6.2 Soybean Transformation	43
1.6.3 Functional Genomics for Candidate Gene Discovery	43
1.7 Future Scope	44
References	45

2 Oilseed Rape

R. Snowdon, W. Lühs, W. Friedt	55
2.1 Introduction	55
2.1.1 Origin and History of Oilseed Rape	55
2.1.2 Botanical Description	56
2.1.3 Economic Importance of Oilseed Rape	56
2.1.4 Nutritional and Chemical Composition of Rapeseed Oil	57

2.2	Breeding of Oilseed Rape	59
2.2.1	Breeding Methods	59
2.2.2	Breeding for Improved Productivity	59
2.2.3	Improvement of Seed Components	60
2.2.4	Hybrid Breeding and Cytoplasmic Male Sterility Systems	62
2.2.5	Use of Male Sterility Systems in Oilseed Rape Breeding	64
2.2.6	Genetic Diversity for Heterosis and Hybrid Breeding	64
2.2.7	Expanding the Genetic Variability in Oilseed Rape by Interspecific Hybridization	65
2.3	Cytogenetic Studies of <i>Brassica</i> Crops and Interspecific Hybrids	67
2.3.1	History of Cytogenetic Studies in <i>Brassica</i>	67
2.4	Genetic Diversity Studies in <i>Brassica napus</i>	71
2.5	Genetic Modification: Status and Potential of Transgenic <i>Brassica napus</i>	72
2.5.1	Herbicide Tolerance	72
2.5.2	Genetic Engineering of Fatty Acid Biosynthesis	73
2.6	Molecular Markers and Genetic Mapping	77
2.6.1	Use of Isoenzymes in Oilseed Rape Breeding	77
2.6.2	<i>Brassica napus</i> Genetic Maps: From RFLP to PCR Markers ...	77
2.6.3	Mapping of Genes and QTLs for Morphological and Quality Traits	88
2.6.4	Mapping of Genes and QTL for Disease Resistance	91
2.6.5	Mapping QTLs for Abiotic Stress	92
2.6.6	Towards an Integrated <i>B. napus</i> Genetic Map	93
2.7	Comparative Genomic Studies	94
2.8	Physical Mapping and Genomics Tools	98
2.8.1	Physical Mapping	98
2.8.2	Public Genome Resources: The Multinational <i>Brassica</i> Genome Project	100
2.8.3	Genome Sequencing in <i>B. oleracea</i> and <i>B. rapa</i>	100
2.9	Outlook	103
	References	103

3 Peanut

	S. L. Dwivedi, D.J. Bertoli, J. H. Crouch, J. F. Valls, H. D. Upadhyaya, A. Fávero, M. Moretzsohn, A. H. Paterson	115
3.1	Introduction	115
3.1.1	Origin	115
3.1.2	Botanical Types and Distribution	115
3.1.3	Crop Production and Uses	116
3.1.4	Improved Quality Requirements: Reduced Allergenicity and Toxicity	118
3.2	Genetic Resources in Peanut	118
3.2.1	Wild <i>Arachis</i> Species and Interspecific Gene Introgression into Cultivated Peanut	118
3.2.2	Cultivated Germplasm	119
3.2.3	Core Collections	119
3.3	Appropriate Germplasm and Evaluation Systems for Mapping Economically Important Traits in Peanut	121
3.3.1	Phenotypic Screens, Resistance/Tolerance Mechanism, and Genetics	121

3.3.2	Germplasm with Beneficial Traits for Mapping and Genetic Enhancement	126
3.4	Genomic Resources in Peanut	128
3.4.1	DNA Markers (RFLPs, RAPDs, AFLPs, SSRs)	128
3.4.2	Molecular Diversity	131
3.4.3	Mapping Population	131
3.4.4	Genetic Linkage Map	132
3.4.5	Comparative Mapping with Model Genomes	133
3.4.6	BAC Libraries and New Generation Markers	133
3.5	Successes and Limitations of Conventional Breeding in Peanut	136
3.6	Biotechnological Applications to Genetic Enhancement in Peanut	137
3.6.1	Marker/Trait Associations	137
3.6.2	Unlocking the Genetic Variation from Wild Genetic Resources	137
3.6.3	Transgenics	140
3.7	Conclusions and Future Outlook	142
	References	143

4 Sunflower

N. Paniego, R. Heinz, P. Fernandez, P. Talia, V. Nishinakamasu, H. Esteban Hopp		153
4.1	Introduction	153
4.1.1	Brief History	153
4.1.2	Botanical Description	153
4.1.3	Economic Importance	154
4.1.4	Conventional Breeding	155
4.2	Molecular Markers and Genetic Maps	156
4.3	Genomics and Transcriptomics	157
4.4	Structural Analysis by in situ Hybridization	163
4.5	Resistance Genes in Cultivated and Wild Sunflowers	164
4.6	QTL Analysis for Developmental and Agronomic Traits	168
4.7	<i>In vitro</i> Tissue-Culture-Aided Breeding	169
4.8	Genetic Transformation	170
4.8.1	Transgenic Traits	170
4.8.2	Transgenic Sunflowers: Biosafety Concerns	170
	References	172

5 Indian Mustard

D. Edwards, P. A. Salisbury, W. A. Burton, C. J. Hopkins, J. Batley		179
5.1	Introduction	179
5.1.1	Brief History of <i>Brassica juncea</i>	179
5.1.2	Botanical Description	179
5.1.3	Economic Importance	180
5.1.4	Breeding Objectives and Progress	181
5.1.5	Overcoming Limitations of Classical Endeavours	183
5.1.6	Classical Mapping Efforts	185
5.1.7	Utility of Molecular Mapping	185
5.2	Construction of Genetic Maps	186
5.2.1	Genetic Mapping in <i>B. juncea</i>	186
5.2.2	First-Generation Maps	186
5.2.3	Second-Generation Maps	188

5.2.4	Comparative Mapping	193
5.3	Gene Mapping and Marker-Assisted Selection	195
5.3.1	White Rust Resistance	195
5.3.2	Seed Coat Color	197
5.3.3	Fatty Acid/Oil Content	198
5.3.4	Glucosinolate Content	201
5.4	Marker-Assisted Breeding	202
5.5	Transgene-Assisted Breeding	203
5.6	Advanced Works	203
5.6.1	Gene Discovery and Expression	203
5.7	Future Scope of Works	204
	References	205

6 *Brassica Rapa*

	P. Quijada J. Cao, X. Wang, M. Hirai, C. Kole	211
6.1	Introduction	211
6.1.1	History of the Crop	211
6.1.2	Botanical Description	211
6.1.3	Economic Importance	213
6.1.4	Breeding Objectives and Achievements	213
6.2	Construction of Genetic Maps	215
6.2.1	Brief History of Mapping Efforts	215
6.2.2	Mapping Populations	216
6.2.3	Mapping Resources	217
6.2.4	Genetic Maps	218
6.2.5	Comparative Mapping	221
6.3	Gene Mapping	224
6.3.1	Seed Coat Color	224
6.3.2	Disease Resistance	227
6.3.3	Vernalization Requirements and Flowering Time	229
6.3.4	Fatty Acid Content	231
6.3.5	Self-Incompatibility	231
6.3.6	Dwarfism	232
6.3.7	Markers Linked to Microspore Embryogenic Ability	233
6.4	QTL Mapping	233
6.4.1	Morphological Traits	233
6.4.2	Heat Resistance	236
6.4.3	Resistance to Clubroot	236
6.4.4	Resistance to White Rust	236
6.4.5	Linolenic Acid Content	237
6.4.6	Flowering Time	239
6.4.7	Abiotic Stresses: Winter Survival and Freezing Tolerance	240
6.4.8	Mendelization of QTLs	242
6.5	Marker-Assisted Breeding	243
6.5.1	Marker Conversions	243
6.5.2	Germplasm Screening	243
6.5.3	Marker-Assisted Selection	246
6.5.4	Marker-Assisted Introgression	248
6.5.5	Gene Pyramiding	250
6.6	Map-Based Cloning	251
6.6.1	Principles of Map-Based Cloning	251

6.6.2	Genetic Resources and Mapping Populations	252
6.6.3	BAC Libraries	252
6.6.4	Outlook	253
6.7	Future Scope of Works	253
	References	254

7 Black Mustard

S. Das, U. Lagercrantz, M. Lascoux	265
7.1 Introduction	265
7.1.1 Taxonomy	265
7.1.2 Genetic Relationship and Evolution of <i>Brassica</i> species	265
7.1.3 Breeding	266
7.2 DNA Marker Technology	267
7.3 Genetic Linkage Mapping in <i>Brassica nigra</i>	267
7.3.1 Genetic Maps	267
7.3.2 Comparative Mapping	269
7.4 Mapping of Flowering-Time Trait in <i>Brassica nigra</i>	270
7.5 Future Scope of Work	271
References	272

8 Flax

C.A. Cullis	275	
8.1	Introduction	275
8.1.1	Origin and History	275
8.1.2	Biological Descriptions	275
8.1.3	Karyotype	277
8.1.4	Genome Size	278
8.1.5	Economic Importance	278
8.1.6	Breeding Objectives	280
8.2	Construction of Genetic Maps	282
8.2.1	Classical Mapping	282
8.2.2	Molecular Maps	285
8.3	Germplasm Identification	287
8.3.1	Germplasm Characterization	287
8.3.2	Molecular Markers for Germplasm Identification	289
8.3.3	Inducing New Variability or Traits	290
8.4	Gene Discovery	291
8.5	Quantitative Trait Loci	291
8.6	Future Scope of Works	291
References		292
