Contents

PART I. Information Bounds

1. Models, scores, and tangent spaces

1.1 Introduction 3

1.2 Models $\mathcal{P}$ 3

1.3 Scores: Differentiability of the Model 6

1.4 Tangent Sets $\dot{\mathcal{P}}^0$ and Tangent Spaces $\dot{\mathcal{P}}$ 7

1.5 Score Operators 8

1.6 Exercises 11

2. Convolution and asymptotic minimax theorems

2.1 Introduction 13

2.2 Finite-dimensional Parameter Spaces 13

2.3 Infinite-dimensional Parameter Spaces 16

2.4 Exercises 20

3. Van der Vaart's Differentiability Theorem

3.1 Differentiability of Implicitly Defined Functions 23

3.2 Some Applications of the Differentiability Theorem 28

3.3 Exercises 31

Part II. Nonparametric Maximum Likelihood Estimation

1. The interval censoring problem

1.1 Characterization of the non-parametric maximum likelihood estimators 35

1.2 Exercises 50

2. The deconvolution problem

2.1 Decreasing densities and non-negative random variables 53

2.2 Convolution with symmetric densities 56

2.3 Exercises 61

3. Algorithms

3.1 The EM algorithm 65

3.2 The iterative convex minorant algorithm 69

3.3 Exercises 73

4. Consistency

4.1 Interval censoring, Case 1 75

4.2 Convolution with a symmetric density 79

4.3 Interval censoring, Case 2 81

4.4 Exercises 86

5. Distribution theory

5.1 Interval censoring, Case 1 89

5.2 Interval censoring, Case 2 100

5.3 Deconvolution with a decreasing density 108

5.4 Estimation of the mean 114

5.5 Exercises 120
