

Declan A. Diver

A Plasma Formulary for Physics, Technology and Astrophysics

 **WILEY-VCH**

Berlin · Weinheim · New York · Chichester · Brisbane · Singapore · Toronto

Contents

<i>Preface</i>	<i>xv</i>
1 <i>Basic Physical Data</i>	1
1.1 <i>Basic Physical Units</i>	2
1.1.1 <i>SI Units</i>	2
1.1.2 <i>cgs-Gaussian Units</i>	3
1.2 <i>Maxwell's Electromagnetic Equations</i>	3
1.3 <i>Special Relativity</i>	4
1.4 <i>Physical Constants</i>	5
1.5 <i>Dimensional Analysis</i>	7
1.6 <i>Ionization Energies of Gas-Phase Molecules</i>	9
1.7 <i>Characteristic Parameters for Typical Plasmas</i>	10
2 <i>Basic Plasma Parameters</i>	13
2.1 <i>Notation</i>	14
2.2 <i>Natural Timescales</i>	15
2.2.1 <i>Characteristic Frequencies</i>	15
2.2.2 <i>Characteristic Times</i>	16
2.3 <i>Natural Scalelengths</i>	17
2.3.1 <i>Debye Length</i>	17

2.3.2	<i>Mean Free Path</i>	17
2.3.3	<i>Plasma Skin Depth</i>	17
2.3.4	<i>Larmor Radius</i>	17
2.4	<i>Natural Speeds</i>	18
2.4.1	<i>Alfvén Speed</i>	18
2.4.2	<i>Sound Speed</i>	18
2.5	<i>Miscellaneous Parameters</i>	19
2.5.1	<i>Collision Cross-Section</i>	19
2.5.2	<i>Differential Scattering Cross-Section</i>	19
2.5.3	<i>Magnetic Moment</i>	19
2.5.4	<i>Mobility</i>	19
2.6	<i>Non-Dimensional Parameters</i>	20
2.6.1	<i>Dielectric Constant</i>	20
2.6.2	<i>Hartmann Number</i>	21
2.6.3	<i>Knudsen Number</i>	21
2.6.4	<i>Lundquist Number</i>	21
2.6.5	<i>Mach Number</i>	21
2.6.6	<i>Magnetic Reynolds Number</i>	21
2.6.7	<i>Plasma Beta</i>	22
3	<i>Discharge Plasmas and Elementary Processes</i>	23
3.1	<i>Notation</i>	24
3.2	<i>Plasma Sheath</i>	25
3.2.1	<i>Planar Sheath Equation</i>	25
3.2.2	<i>Child-Langmuir Law</i>	26
3.2.3	<i>Collisional Sheaths</i>	27
3.3	<i>Double-Layer</i>	28
3.4	<i>Diffusion Parameters</i>	29
3.4.1	<i>Free Diffusion</i>	29
3.4.2	<i>Mobility</i>	30
3.4.3	<i>Ambipolar Diffusion</i>	30
3.4.4	<i>Ambipolar Diffusion in a Magnetic Field</i>	32
3.5	<i>Ionization</i>	32
3.5.1	<i>Townsend Breakdown</i>	32
3.5.2	<i>Alfvén Ionization</i>	37
3.5.3	<i>Secondary Electron Emission</i>	37
3.5.4	<i>Townsend Breakdown Criterion</i>	39
3.5.5	<i>Paschen Curve</i>	39

3.6	<i>Ionization Equilibrium</i>	40
3.6.1	<i>Local Thermodynamic Equilibrium</i>	40
3.6.2	<i>Saha Equation</i>	41
4	<i>Radiation</i>	43
4.1	<i>Notation</i>	44
4.2	<i>Radiation from a Moving Point Charge</i>	45
4.2.1	<i>Liénard-Wiechert Potentials</i>	45
4.2.2	<i>Electric and Magnetic Fields of a Moving Charge</i>	45
4.2.3	<i>Power Radiated by an Accelerating Point Charge</i>	46
4.2.4	<i>Frequency Spectrum of Radiation from an Accelerating Charge</i>	50
4.3	<i>Cyclotron and Synchrotron Radiation</i>	50
4.3.1	<i>Spectral Power Density</i>	51
4.3.2	<i>Power in Each Harmonic</i>	52
4.3.3	<i>Total Radiated Power</i>	53
4.3.4	$\beta_v \ll 1$: <i>Cyclotron Emission</i>	53
4.3.5	$\beta_v \sim 1$: <i>Synchrotron Emission</i>	53
4.4	<i>Bremsstrahlung</i>	54
4.5	<i>Radiation Scattering</i>	55
4.5.1	<i>Thomson Scattering</i>	56
4.5.2	<i>Incoherent Thomson Scattering from an Unmagnetized Plasma</i>	58
4.5.3	<i>Coherent Thomson Scattering from an Unmagnetized Plasma</i>	60
4.5.4	<i>Compton Scattering</i>	61
4.5.5	<i>Klein-Nishina Cross-Section</i>	61
5	<i>Kinetic Theory</i>	63
5.1	<i>Notation</i>	64
5.2	<i>Fundamentals</i>	64
5.3	<i>Boltzmann Equation</i>	65
5.4	<i>Maxwellian Distribution</i>	65
5.5	<i>Vlasov Description</i>	67
5.5.1	<i>Equilibrium Solutions</i>	67
5.6	<i>Collisional Modelling</i>	68
5.6.1	<i>Boltzmann Collision Term</i>	68

5.6.2	<i>Simplified Boltzmann Collision Term</i>	69
5.6.3	<i>Fokker-Planck</i>	69
5.6.4	<i>Fokker-Planck Potentials</i>	70
5.7	<i>Driven Systems</i>	71
5.7.1	<i>Generalized Distribution</i>	71
6	<i>Plasma Transport</i>	75
6.1	<i>Notation</i>	76
6.2	<i>Basic Definitions</i>	76
6.3	<i>Binary Collisions</i>	77
6.3.1	<i>Elastic Collisions Between Charged Particles</i>	77
6.4	<i>Particle Dynamics</i>	80
6.4.1	<i>Drifts</i>	81
6.4.2	<i>Adiabatic Invariants</i>	83
6.4.3	<i>Magnetic Mirror</i>	84
6.5	<i>Transport Coefficients</i>	85
6.5.1	<i>Fully Ionised Plasma, Zero Magnetic Field, Krook Operator</i>	85
6.5.2	<i>Lorentzian and Spitzer Conductivity</i>	85
6.5.3	<i>Fully Ionized and Magnetized Plasma: Braginskii Coefficients</i>	86
6.5.4	<i>Corrections to Braginskii Coefficients</i>	90
6.5.5	<i>Equal Mass Plasma Transport</i>	91
7	<i>Plasma Waves</i>	93
7.1	<i>Notation</i>	94
7.2	<i>Waves in Cold Plasmas</i>	95
7.2.1	<i>Model Equations</i>	95
7.2.2	<i>Cold Plasma Variable Dependencies</i>	96
7.2.3	<i>Dielectric Tensor for a Cold Magnetised Plasma</i>	96
7.2.4	<i>General Dispersion Relation</i>	97
7.2.5	<i>Equal-Mass Cold Plasmas</i>	103
7.3	<i>Fluid Plasmas</i>	103
7.3.1	<i>Hydromagnetic Equations</i>	104
7.3.2	<i>Single Fluid MHD Plasma</i>	105
7.3.3	<i>Variable Dependencies in Ideal MHD</i>	106
7.3.4	<i>General Dispersion Relation: Ideal MHD</i>	107

7.4	<i>Waves in Hot Plasmas</i>	109
7.4.1	<i>Dielectric Function for an Unmagnetized Plasma</i>	109
7.4.2	<i>Langmuir Waves</i>	109
7.4.3	<i>Ion-Acoustic Waves</i>	110
7.4.4	<i>Dielectric Tensor for a Hot Plasma</i>	111
8	<i>Flows</i>	117
8.1	<i>Notation</i>	118
8.2	<i>Fundamental Results</i>	118
8.2.1	<i>Alfvén's Theorem</i>	118
8.2.2	<i>Cowling's Anti-Dynamo Theorem</i>	119
8.2.3	<i>Ferraro's Law of Isorotation</i>	119
8.2.4	<i>Kelvin's Vorticity Theorem</i>	119
8.3	<i>Hydromagnetic Flows</i>	120
8.3.1	<i>Hartmann Flow</i>	121
8.3.2	<i>Couette Flow</i>	123
8.3.3	<i>Field-Aligned Flows</i>	123
8.4	<i>Solar Wind</i>	125
8.5	<i>Neutral Gas/Magnetized Plasma Flows</i>	127
8.6	<i>Beams</i>	128
8.6.1	<i>Beam Parameters</i>	128
8.6.2	<i>Special Cases</i>	131
8.7	<i>Hydromagnetic Shocks</i>	134
8.7.1	<i>Further Notation</i>	135
8.7.2	<i>Shock Classification</i>	136
8.7.3	<i>Shock Propagation Parallel to B_1</i>	137
8.7.4	<i>Shock Propagation Perpendicular to B_1</i>	139
8.7.5	<i>General Case: Fast Magnetic Shocks</i>	140
8.7.6	<i>General Case: Slow Magnetic Shocks</i>	141
8.7.7	<i>Further Reading</i>	142
8.8	<i>Ion-Acoustic Shock</i>	142
9	<i>Equilibria and Instabilities</i>	145
9.1	<i>Notation</i>	146
9.2	<i>General Considerations</i>	147
9.3	<i>Fluid Equilibria</i>	147
9.3.1	<i>Ideal MHD</i>	147
9.3.2	<i>Cylindrical Equilibria</i>	149

9.4	<i>Fluid Instabilities</i>	152
9.4.1	<i>Firehose Instability</i>	152
9.4.2	<i>Gravitational Instability</i>	153
9.4.3	<i>Kelvin-Helmholtz Instability</i>	155
9.4.4	<i>Cylindrical Pinch Instabilities</i>	155
9.4.5	<i>Generalized Pinch Instabilities</i>	157
9.4.6	<i>Resistive Drift Wave Instability</i>	161
9.4.7	<i>MHD Resistive Wall Instability</i>	161
9.4.8	<i>MHD Resistive Tearing Mode</i>	162
9.4.9	<i>Streaming Instability</i>	163
9.5	<i>Kinetic Instabilities</i>	164
9.5.1	<i>Bump-in-Tail Instability</i>	164
9.5.2	<i>Electron Runaway</i>	165
9.5.3	<i>Ion-Acoustic Instability</i>	165
10	<i>Mathematics</i>	167
10.1	<i>Vector Algebra</i>	168
10.2	<i>Vector Calculus</i>	168
10.2.1	<i>Cartesian Co-ordinates</i>	169
10.2.2	<i>Cylindrical Co-ordinates</i>	170
10.2.3	<i>Spherical Co-ordinates</i>	172
10.3	<i>Integral Theorems</i>	174
10.3.1	<i>Stokes' Theorems</i>	174
10.3.2	<i>Gauss' Theorems</i>	175
10.3.3	<i>Green's Theorems</i>	175
10.4	<i>Matrices</i>	175
10.4.1	<i>Matrix Transpose</i>	176
10.4.2	<i>Complex Conjugate</i>	176
10.4.3	<i>Symmetric</i>	176
10.4.4	<i>Orthogonal</i>	176
10.4.5	<i>Nilpotent</i>	176
10.4.6	<i>Idempotent</i>	176
10.4.7	<i>Triangular</i>	177
10.4.8	<i>Trace</i>	177
10.4.9	<i>Determinant and Inverse</i>	177
10.4.10	<i>Partitioned Matrices</i>	178
10.4.11	<i>Eigenvalues and Eigenvectors</i>	178
10.4.12	<i>Hermitian Matrix</i>	179

10.4.13 Unitary Matrix	179
10.5 Eigenfunctions of the Curl Operator	179
10.6 Wave Scattering	180
10.6.1 Simple Constant Barrier	180
10.6.2 Phase Integral Method	182
10.6.3 Mode Conversion	183
10.7 Plasma Dispersion Function	185
 Appendix A Guide to Notation	 187
