Editor's Preface	iii
Variables and constants	xv
Abbreviations	xix
1 Introductions	1
1.1 Medical laboratory diagnostics	2
1.2 Biosensor technologies for point-of-care testing	3
1.3 Integrated optical waveguides and microresonators	6
1.4 Outline of the thesis	9
2 Basics	11
2.1 Guided waves in planar optical waveguides	11
2.1.1 Planar optical waveguides	11
2.1.2 Propagation of optical waves	12
2.1.3 Coupled modes in waveguides	18
2.2 Planar optical microresonators	19
2.2.1 Basic layouts and parameters	19
2.2.2 Manufacturing	24
2.2.3 Biosensing	26
2.3 Functionalization and biofunctionalization	30
3 UV-NIL Polymer Microresonator Biosensor Design	31
3.1 UV-assisted nanoimprint lithography	31
3.2 Waveguide cross-sections and refractive indices	35
3.2.1 Analytical waveguide modeling	35
3.2.2 Mode diagrams	39
3.2.3 Conclusions	43
3.3 Waveguide coupling	44
3.4 Waveguide losses	46
3.4.1 Absorption loss	47
3.4.2 Roughness loss	48
3.4.3 Substrate loss	49

3.4.4	Radiation loss due to bending	49
3.5	Sensitivity of the effective index to analyte binding	53
3.6	Overall sensitivity and detection limit	53
3.7	Generic design guidelines	56
3.8	Parameter selection for UV-NIL polymer waveguides	58
3.9	Comparison of polymer and silicon-based waveguides	58
3.9.1	Waveguide geometry	59
3.9.2	Radiation loss due to bending	59
3.9.3	Material damping	61
3.9.4	Surface roughness	61
3.9.5	Coupling channel widths and coupling coefficients	61
3.9.6	Conclusions	62
4	Characterization and Proof of Concept	65
4.1	Manufacturing-based design limits and chosen designs	65
4.2	Measurement setup and characterization process	67
4.3	Optical properties of UV-NIL polymer microresonators	71
4.4	Proof of concept	73
4.4.1	Sensitivity to bulk solutions	73
4.4.2	Reproducibility and drift	76
4.4.3	Comparison with theory	79
4.4.4	Comparison with literature	79
4.4.5	Sensitivity improvement	81
4.5	Asymmetry of the resonance curves	81
4.5.1	Cavity lifetime	82
4.5.2	Thermal influence	83
4.5.3	Summary	86
4.6	Conclusions	86
5	Integration into a biosensor platform	89
5.1	Chemical functionalization by oxygen plasma	90
5.2	Preparation of a biosensor characterization assay	94
5.2.1	Binding of fluorescent nanoparticles onto polymer surfaces	95
5.3	Microfluidic system	99
5.3.1	Programmable microfluidic system	101
5.3.2	System evaluation and improvement	104
5.4	Conclusions	108
6	Conclusions	111
	Declaration of authorship	127
