Preface — VII

List of symbols and abbreviations — XVII

1	Time series — 1
1.1	Examples of time series — 1
1.2	Stochastic processes — 4
1.3	Weak and strict stationarity — 9
1.4	Existence of Brownian motion and the Poisson process — 14
1.5	Exercises — 21
2	Hilbert spaces — 22
2.1	Inner-product spaces and their properties — 22
2.2	Hilbert spaces — 25
2.3	The Projection Theorem — 28
2.4	Orthonormal sets — 32
2.5	Mean-square convergence, conditional expectation and best linear prediction in \mathcal{S} — 34
2.6	Best linear estimation of random vectors in \mathcal{S} — 37
2.7	Hilbert space isomorphisms — 39
2.8	Fourier transforms — 40
2.8.1	The Fourier transform of an L^1 function — 41
2.8.2	The Fourier transform of an L^2 function — 45
2.9	Exercises — 49
3	Second-order stochastic processes — 52
3.1	The mean and autocovariance functions — 52
3.2	Mean-square continuity — 54
3.3	Mean-square differentiability — 56
3.4	Mean-square Riemann integrability — 59
3.5	Mean-square and pathwise properties — 61
3.6	Exercises — 61
4	Orthogonal increment processes — 63
4.1	Preliminaries — 63
4.2	Definition and elementary properties — 63
4.3	Integration with respect to an OIP — 66
4.4	OIP processes with densities — 71
4.5	The Fourier transform of an OIP process — 75
4.6	Exercises — 77

5	Spectral theory of MSC stationary processes — 78
5.1	Spectral representation of the autocovariance function — 78
5.2	The spectral representation of a stationary process — 82
5.3	Inversion formulae — 90
5.4	Linear transformations of MSC stationary processes — 93
5.5	Exercises — 95
6	Mean-square linear prediction of weakly stationary processes — 97
6.1	The discrete-time case — 97
6.2	The continuous-time case — 105
6.3	Exercises — 127
7	Second-order CARMA processes — 130
7.1	Definition and properties — 130
7.2	The Wold–Karhunen representation — 134
7.3	Prediction — 144
7.4	R-programs to compute the kernel and autocovariance function — 154
7.5	Exercises — 157
8	Infinitely divisible distributions — 158
8.1	Infinite divisibility in Lévy processes — 158
8.2	First examples and elementary properties of infinitely divisible distributions — 160
8.3	The distinguished logarithm and n^{th} root — 164
8.4	Exercises — 172
9	The Lévy–Khintchine formula for infinitely divisible distributions — 173
9.1	The Lévy–Khintchine formula — 173
9.2	Linear transformations and independence of infinitely divisible distributions — 192
9.3	Convergence of infinitely divisible distributions — 196
9.4	Exercises — 201
10	Lévy processes — 203
10.1	Definition, elementary properties and examples — 203
10.2	Lévy processes in law and infinitely divisible distributions — 214
10.3	Existence of Lévy processes — 220
10.4	Exercises — 228
11	Distributional properties of Lévy processes and the strong law of large numbers — 229
11.1	The Markov property and time reversal of Lévy processes — 229

11.2	Moments of Lévy processes and infinitely divisible distributions —	230
11.3	Strong law of large numbers and a further growth condition for Lévy processes —	244
11.4	Exercises —	246
12	Lévy processes as random elements and their jump structure —	248
12.1	Lévy processes as random elements in the space of càdlàg functions —	248
12.2	Characterizations of the Poisson process and of Brownian motion —	259
12.3	The jump structure of Lévy processes —	265
12.4	Exercises —	285
13	The Lévy–Itô decomposition of Lévy processes and consequences —	287
13.1	The Lévy–Itô decomposition of a Lévy process —	287
13.2	Lévy processes of finite variation —	297
13.3	Subordinators —	304
13.4	Exercises —	312
14	Examples of Lévy processes —	314
14.1	Stable distributions and stable Lévy processes —	314
14.2	The gamma process —	328
14.3	Processes obtained by subordination —	330
14.4	The inverse Gaussian and related Lévy processes —	338
14.5	Exercises —	343
15	Integration of deterministic functions with respect to Lévy processes —	346
15.1	Lebesgue–Stieltjes integral with respect to Lévy processes of finite variation —	346
15.2	Integration with respect to one-dimensional Lévy processes —	354
15.3	The integral for matrix-valued integrands and \mathbb{R}^d -valued Lévy processes —	364
15.4	Exercises —	368
16	The distribution of the integral and consequences —	369
16.1	The characteristic function of the integral —	369
16.2	Distributional properties of the integral —	379
16.3	Continuous-time moving average processes —	386
16.4	Improper integrals —	388
16.5	Exercises —	390
17	Ornstein–Uhlenbeck processes —	391
17.1	Solution of the Ornstein–Uhlenbeck equation —	391

17.2	Stationary Ornstein–Uhlenbeck processes —	395
17.3	Markov-stable Ornstein–Uhlenbeck processes —	405
17.4	Exercises —	408
18	Lévy-driven CARMA processes: definition, existence, uniqueness and properties —	410
18.1	Introduction —	410
18.2	Definition and existence —	411
18.3	Uniqueness and the Δ -sampled sequence —	419
18.4	Second-order properties when $\mathbb{E} L_1 ^2 < \infty$ —	425
18.5	Causality —	429
18.6	The canonical state vector —	432
18.7	The Δ -sampled sequence Y^Δ , when $\mathbb{E} L_1 ^2 < \infty$ —	435
18.8	Exercises —	441
19	QML estimation for CARMA processes —	443
19.1	QML estimation for CARMA processes based on observations at fixed times t_1, \dots, t_n —	443
19.2	QML estimation for regularly sampled CARMA processes —	448
19.3	The embedding problem —	449
19.4	Examples, stochastic volatility —	458
19.5	Simulation of causal CARMA processes —	466
19.6	Asymptotic distribution of QML estimators for a CARMA($p, p - 1$) process —	469
19.7	Estimating the Lévy increments —	474
19.8	Exercises —	477
A	Appendix: R Programs for generation of Lévy increments —	479
	Bibliography —	485
	Index —	489
