Introduction XXXV

1	Diversity-Oriented Syntheses of Natural Products and Natural Product-Like Compounds	1
	<i>Ling-Min Xu, Yu-Fan Liang, Qin-Da Ye, and Zhen Yang</i>	
1.1	Introduction	1
1.2	Diversity-Oriented Synthesis (DOS)	2
1.2.1	Diversity-Oriented Synthesis of Skeletally and Stereochemically Diverse Small Molecules [10a]	3
1.2.2	Biomimetic Diversity-Oriented Synthesis of Galanthamine-Like Molecules	3
1.3	Diverted Total Synthesis (DTS)	7
1.3.1	Diverted Total Synthesis of the Migrastatins	7
1.4	Function-Oriented Synthesis (FOS)	9
1.4.1	Syntheses of Novel and Highly Potent Analogs of Bryostatin	10
1.4.2	Discovery of Potent and Practical Antiangiogenic Agents Inspired by Cortistatin A	11
1.5	Target-Oriented Synthesis (TOS)	11
1.5.1	Synthetic Studies and Biological Evaluation of Ecteinascidin 743	13
1.5.2	Total Synthesis and Biological Evaluation of Biyouyanagin A and Analogs	15
1.5.3	Total Synthesis of Vindoline, Related Natural Products, and Structural Analogs	18
1.5.4	Total Synthesis of Eudesmane Terpenes by Site-Selective C–H Oxidations	19
1.5.5	Total Synthesis of Bipinnatin J, Rubifolide, and Coralloidolides A, B, C, and E	21
1.5.6	Total Synthesis of Diverse Carbogenic Complexity Within the Resveratrol Class from a Common Building Block	23

1.6	Conclusion and Perspectives	24

17 Organic Materials and Chemistry for Bulk Heterojunction Solar Cells 643

Chun-Hui Duan, Fei Huang, and Yong Cao

17.1	Introduction	643
17.2	Molecular Design and Engineering of Donor Materials	645
17.2.1	Molecular Design and Engineering of Conjugated Polymers	645
17.2.1.1	Homopolymers	645
17.2.1.2	Push–Pull Copolymers	650
17.2.1.3	Conjugated Polymers with Pendant Conjugated Side Chains	655
17.2.1.4	Block Conjugated Copolymers	656
17.2.2	Solution-Processed Small-Molecule Donor Materials	660
17.3	Molecular Design and Engineering of Acceptor Materials	662
17.3.1	Fullerene-Based Acceptors	662
17.3.2	Non-Fullerene-Based Acceptors	669
17.4	Conclusion and Outlook	671
	Acknowledgments	671
	References	671

18 Catalytic Utilization of Carbon Dioxide: Actual Status and Perspectives 685

Albert Boddien, Felix Gärtner, Christopher Federsel, Irene Piras, Henrik Junge, Ralf Jackstell, and Matthias Beller

18.1 Introduction 685

18.2 Catalytic Reductions of CO₂ to Formic Acid and Methanol 686

18.2.1 Electrochemical CO₂ Reduction 686

18.2.2 Photochemical CO₂ Reduction 689

18.2.3 Catalytic Reduction of CO₂ to Methanol 691

18.2.3.1 Heterogeneous Catalysis 692

18.2.3.2 Homogeneous Catalysis 693

18.2.3.3 Enzymatic Approaches 694

18.2.4 Catalytic Reduction of CO₂ to Formic Acid 695

18.2.4.1 Heterogeneous Catalysis 696

18.2.4.2 Homogeneous Catalysis 697

18.3 CO₂ as a C1-Building Block in C–C Coupling Reactions 702

18.4 Catalytic C–O Bond Formation Utilizing Carbon Dioxide 703

18.4.1 Synthesis of Linear Carbonates 704

18.4.2 Synthesis of Cyclic Carbonates 707

18.5 Current Industrial Processes Using CO₂ 710

18.5.1 Urea 711

18.5.2 Methanol 713

18.5.3 Carboxylic Acids 713

18.5.4 Carbonates 714

18.6 Conclusion and Outlook 715
