Part I Synopsis

1	Introduction	3
1.1	Motivation and Problem Statement	3
1.2	Aim and Research Question	6
1.3	Content and Structure of the Thesis	7
2	Background	15
2.1	Characteristics of Agriculture in Germany	15
2.2	Digitalization in Agriculture and Recent Findings of Resilient Technologies	17
3	Research Design	25
3.1	Research Approach	25
3.2	Research Context	26
3.3	Methods	27
4	Findings	33
4.1	Farms' Digital Dependencies and Vulnerabilities	33
4.2	Towards a Resilient Software Architecture for Farm Management	35
4.3	LoRaWAN-based IoT Developments Towards Resilient Communications	37
5	Discussion	43
5.1	The Risk of Failure of Technologies Used By Farmers	43
5.2	Concepts and Prototypes as Demonstration of Resilient Smart Farming Technologies	45

5.3	Limitations	48
6	Conclusion	51
6.1	Key Findings and Implications	51
6.2	Future Work	53
 Part II Publications		
7	Resilience in Agriculture: Communication and Energy Infrastructure Dependencies of German Farmers	57
7.1	Introduction	57
7.2	State of Research	58
7.3	Qualitative Analysis	62
7.4	Quantitative Analysis	68
7.5	Discussion	75
7.6	Conclusion	79
8	The Role of Privacy in Digitalization—Analyzing Perspectives of German Farmers	81
8.1	Introduction	81
8.2	Background and Related Work	82
8.3	Method	87
8.4	Results of the Empirical Study	92
8.5	Discussion	100
8.6	Conclusion	106
9	LoRaWAN Security Issues and Mitigation Options by the Example of Agricultural IoT Scenarios	109
9.1	Introduction	109
9.2	Background and Research Gap	111
9.3	Specifics of IoT in Wide Area Applications	115
9.4	Literature Selection Method	119
9.5	Vulnerabilities and Mitigations	122
9.6	Discussion	135
9.7	Conclusion	136
10	GeoBox: Design and Evaluation of a Tool for Resilient and Decentralized Data Management in Agriculture	139
10.1	Introduction	139
10.2	Literature Review: Digitalization and Resilience in Agriculture	141

10.3	Empirical Study: Focus Groups to Derive Requirements for Architecture and Interface Design	147
10.4	Empirical Study: Summary of Findings	150
10.5	Concept and Implementation: A Toolbox for Decentralized Data Management and Resilient Regional Networking in Agriculture	152
10.6	Empirical Evaluation: Usability Tests with Agricultural Practitioners	157
10.7	Empirical Evaluation: Presentation of Findings	159
10.8	Discussion	164
10.9	Conclusion	169
11	LoRaWAN Signal Loss in Rural Areas	171
11.1	Introduction	171
11.2	Foundations and Related Work	172
11.3	Methodology	175
11.4	Results	178
11.5	Discussion	181
11.6	Conclusion	182
12	Reliable Data Transmission Using Low Power Wide Area Networks (LPWAN) for Agricultural Applications	185
12.1	Introduction, Background and Research Question	185
12.2	Related Work and Comparisons of LPWAN Technologies	187
12.3	Concept: LoRa + AX.25 + IPv4 + TCP	190
12.4	Study Design	193
12.5	Results	197
12.6	Discussion	201
12.7	Conclusion and Future Work	203
13	Rural Communication in Outage Scenarios: Disruption-Tolerant Networking via LoRaWAN Setups	205
13.1	Introduction	205
13.2	Background	207
13.3	Related Work: Adapting LPWAN	209
13.4	Use Case and Scenario: Emergency Communication for Agricultural Areas	211

13.5	Farm-to-Farm Distances	212
13.6	Simulation	215
13.7	Concept and Implementation	219
13.8	Conclusion	223
Bibliography		225
