

1	Introduction and thesis structure	1
2	Fundamentals.....	7
2.1	Strain Measurements	8
2.1.1	Piezoresistive Effect, Gage Factor and Temp. Dependence .	8
2.1.2	Sensor Read-out.....	11
2.1.3	Fabrication of Thin Film Systems on Foils	13
2.2	Adhesive Bonding of Composites	19
2.2.1	Bondline Modelling.....	21
2.2.2	Load Transmission in Simple Joints.....	22
2.2.3	Composite Bondline Defects.....	26
2.2.4	Mechanical Testing of Fracture Toughness	27
2.2.5	Bondline Toughening and Disbond Stopping Features	29
2.2.6	Bondline Surveillance Techniques	31
3	Laser-structured Strain Sensors	35
3.1	Laser Parameter Selection	36
3.2	Sensor Direct Writing on Foils	38
3.3	Refining Laser Micromachining for Strain Sensors	40
3.4	Sensor Characterization	43
4	Multifunctional Strain Sensors for Bondline Surveillance	49
4.1	Concept of a Multifunctional Disbond Arrest Feature.....	50
4.2	Bondline Surveillance.....	52
4.3	Smart Inlay with rear Track Bridge	54
4.4	Peel Delamination Testing	59

4.5	Wing Flap Demonstrator.....	65
5	Conclusion and Outlook	67
5.1	Conclusion.....	67
5.2	Outlook	69
6	Appendix	71
6.1	Tactile Systems using Laser-structured Sensors	73
6.1.1	Sensor Direct Writing onto Membranes	74
6.1.2	Flexible Smart Skin: Blister Foil	79
6.2	Process Plans.....	89
6.2.1	Process: Flexible tactile sensor foil	90
6.2.2	Process: Blister mold preparation.....	93
6.2.3	Process: Blister foil on hot plate	94
6.2.4	Process: Blister foil oven cured.....	95
6.3	Own publications	97
6.3.1	Methodology of selective metallic thin film ablation from susceptible polymer substrate using pulsed femtosecond laser	97
6.3.2	Femtosecond laser-contoured micro-strain gauges	119
6.3.3	Smart Inlays for Simultaneous Crack Sensing and Arrest in Multifunctional Bondlines of Composites	127
6.3.4	Polyetherimide reinforced smart inlays for bondline surveillance in composites	145
6.4	Other contributions	163
6.5	Supervised student projects	164
7	References.....	167
