Preface — V

Symbols used — IX

1 Preliminaries — 1

- 1.1 Binary operations — 1
- 1.2 Congruence and residue classes — 1
- 1.3 Group — 4
- 1.4 Homomorphism — 7
- 1.5 Rings and fields — 10

2 Vector spaces — 13

- 2.1 Definition and examples — 13
- 2.2 Vector subspaces — 17
- 2.3 Linear dependence and linear independence — 21
- 2.4 Basis and dimension of a vector space — 23
- 2.5 Sum and direct sum of subspaces — 35
- 2.6 Quotient space — 40

3 Matrices and spaces of matrices — 43

- 3.1 Matrix definition and matrix operations — 43
- 3.2 Some special matrices and their properties — 49
- 3.3 Vector spaces formed by the collection of matrices — 57

4 Linear transformations — 64

- 4.1 Definition and examples of linear transformations — 64
- 4.2 Rank and nullity of a linear transformation — 69
- 4.3 Vector spaces of linear transformations — 82
- 4.4 Transpose of a linear transformation — 90

5 Matrices and linear transformations — 93

- 5.1 The matrix representation of a linear transformation — 93
- 5.2 Effect of change of bases on matrix representation — 101
- 5.3 Rank of a matrix — 106
- 5.4 Elementary matrix operations — 112
- 5.5 System of linear equations — 131
- 5.6 Miscellaneous — 147

6 Inner product spaces — 153

- 6.1 Inner products and norms — 153

6.2	Orthogonality and the Gram–Schmidt process —	161
6.3	The adjoint of a linear operator —	173
7	Determinant, eigenvalues and diagonalization of matrices —	185
7.1	Determinant of a matrix —	185
7.2	Eigenvalues and eigenvectors (of linear transformations and matrices) —	204
7.3	Diagonalization —	216
7.4	Eigenvalues and eigenvectors of some special matrices —	227
7.5	Cayley–Hamilton theorem and the minimal polynomial —	235
8	Bilinear and quadratic forms —	241
8.1	Bilinear forms —	241
8.2	Symmetric bilinear forms and quadratic forms —	251
Index —		263
