

Content Overview

Table of Contents	9
Zusammenfassung	17
Table of abbreviations	23
Chapter 1: Introduction	25
I. Problem statement	25
II. Methodology and research question	29
III. State of the art	52
IV. Outlook and structure	54
Part I: Practical and theoretical foundations	57
Chapter 2: Artificial intelligence's use in medicine	57
I. Artificial intelligence	57
II. Capabilities of clinical AI: case studies	76
III. Interpretability of AI	85
IV. Human-AI collaboration in the healthcare environment	96
V. Conclusion	105
Chapter 3: Bioethical autonomy and artificial intelligence	107
I. The procedural conception of autonomy	108
II. The challenges posed by clinical AI to procedural autonomy	116
III. Conclusion	141
Part II: Autonomy in the law	143
Chapter 4: Autonomy in UK law	143
I. Scope	145
II. Function	148

Table of Contents

Zusammenfassung	17
Table of abbreviations	23
Chapter 1: Introduction	25
I. Problem statement	25
II. Methodology and research question	29
A. Comparative method	29
B. Scope of inquiry	35
C. Legal reasoning and technological innovation	38
1. Instrumentality of law	40
2. Technological dynamism and legal inertia	45
3. Desirability of non-legal regulation	50
4. Summation	51
D. Research question	52
III. State of the art	52
IV. Outlook and structure	54
Part I: Practical and theoretical foundations	57
Chapter 2: Artificial intelligence’s use in medicine	57
I. Artificial intelligence	57
A. Definition	57
B. Machine learning: the underlying technology	59
C. Specific features of ML models: the example of deep neural networks	64
1. Sub-symbolic functioning	64
2. The training process	66
3. Data and performance evaluation	68
4. Summary	75
II. Capabilities of clinical AI: case studies	76

A. Devices complementing human expertise	77
B. Devices (partially) replacing pre-existing cognitive capabilities	80
C. Devices determining dimensions of clinical decision-making	83
III. Interpretability of AI	85
A. Prevalent types of opacity	86
B. Solutions to interpretability problems	91
1. Explainability	91
2. Interpretability	92
3. Evaluation	94
IV. Human-AI collaboration in the healthcare environment	96
A. Choices in the use of ML devices	97
B. User knowledge of ML devices	99
C. ML influence	101
V. Conclusion	105
Chapter 3: Bioethical autonomy and artificial intelligence	107
I. The procedural conception of autonomy	108
A. Decisional autonomy	110
B. Practical autonomy	113
C. Summation	115
II. The challenges posed by clinical AI to procedural autonomy	116
A. The need to form true beliefs about AI's goal-directed action	117
B. Theoretical rationality and changes in human-AI expertise	126
C. Positive freedom and the task of ensuring an adequate understanding of AI	130
1. General risk characteristics of AI	131
2. Informational manipulation	136
i. AI nudging	137
ii. Impermissible manipulation	138
III. Conclusion	141

Part II: Autonomy in the law	143
Chapter 4: Autonomy in UK law	143
I. Scope	145
II. Function	148
III. Substantive content	156
A. Rationality	159
B. Individual reflection	161
C. Positive and negative freedom	165
IV. Limitations	169
V. Conclusion	170
Chapter 5: Autonomy in U.S. law	171
I. Scope	171
A. Jurisdictional scope	172
B. Conceptual scope	178
II. Function	185
III. Substantive content	192
A. Rationality	193
B. Individual reflection	195
C. Positive and negative freedom	200
IV. Limitations	202
V. Conclusion	203
Part III: Informed consent and artificial intelligence in medicine	205
Chapter 6: UK tort law	205
I. Battery	206
A. Limitations flowing from the battery doctrine	207
B. Battery and the nature of valid consent	209
1. Nature of the procedure	210
2. Identity of the professional	216
3. Non-therapeutic motivations	222
C. Summation	223

II. Negligence	224
A. Actionable damage	225
1. Personal injury	226
2. Loss of autonomy	227
i. The nature of the award	229
ii. The autonomy interest	235
3. Summation	245
B. Duty of care	245
1. Medical professionals	247
2. Healthcare institutions	248
3. Summation	252
C. Breach	252
1. The informed consent standard	253
i. The meaning of reasonable disclosure	254
ii. The operationalisation of reasonable disclosure	257
iii. Summation	259
2. The risks of medical AI	260
i. Specific risks	260
ii. Risk-relevant status	262
3. Alterations of expertise	266
4. Information concerning the choice of goals	270
i. Understanding choices	270
ii. AI's lesser influence on the pursuit of objectives	278
5. Summation	281
D. Causation	282
E. Awarding damages	285
III. The UK General Data Protection Regulation	286
IV. Conclusion	290
Chapter 7: Californian tort law	293
I. Battery	294
A. Limitations flowing from the battery doctrine	296
1. Contact	297
2. Unlawful nature	299
3. Intention	300
4. Summation	303
B. Battery and the nature of valid consent	303

1. Substantially different procedure	305
i. Physical nature of the procedure	306
ii. Identity of the professional	309
iii. Non-therapeutic motivations	310
2. Conditional consent	312
C. Summation	312
II. Negligence	313
A. Damage	316
1. Personal injury	317
2. Autonomy interest	318
3. Emotional distress	321
4. Summation	323
B. Duty of care	323
1. Medical professionals	324
2. Healthcare institutions	327
3. Summation	330
C. Breach	331
1. The informed consent standard	333
i. The meaning of reasonable disclosure	333
ii. The operationalisation of reasonable disclosure	335
iii. Summation	339
2. The risks of medical AI	340
i. Specific risks	340
ii. Risk-relevant status	343
3. Alterations to expertise	346
4. Information concerning the choice of goals	351
i. Understanding choices	352
ii. AI's lesser influence on the pursuit of objectives	356
5. Summation	359
D. Causation	359
E. Awarding damages	362
III. Conclusion	364
Chapter 8: Assessment of the comparison and of its wider significance	367
I. The limits of the common law	368
A. Negligence	371

1. Informational requirements under the breach element	371
i. Risk-relevant characteristics	372
ii. Goal-directed action by AI	374
iii. Human-AI expertise	375
iv. Informational manipulation	376
2. Non-informational requirements	377
B. Battery	379
1. Informational requirements for valid consent	379
2. Non-informational requirements	380
C. Conclusion	380
II. Guidance for a bespoke statutory scheme	382
A. Existing consent statutes	384
1. United Kingdom	384
2. California	386
3. Rationale	388
B. An informed consent statute for AI	391
III. Legal reasoning and technological innovation	394
A. Understated challenges of non-legal regulation	394
B. The significance of law's resistance to instrumentalisation	397
C. Law's nuanced normative dynamism	401
IV. Conclusion	405
Bibliography	407
I. Literature	407
II. Material	428
