1	Introduction	11
2	Basic methodology	17
2.1	Mesoscopic physics and quantum transport	17
2.2	Topology in condensed matter physics	20
2.3	3D topological insulators	22
2.3.1	Nature of the surface states of a 3D topological insulator .	22
2.3.2	Origin of the topological surface states	25
2.3.3	Strained HgTe	27
2.4	Quantum transport simulations with tight-binding models	30
2.4.1	Effective continuum Hamiltonians and tight-binding models	30
2.4.2	Fermion doubling	33
3	Topological insulator nanowires with constant cross section	39
3.1	Hamiltonian of the clean nanowire	40
3.1.1	Analytical solution	41
3.1.2	Numerical approach	43
3.2	Disordered nanowires	44
3.2.1	Correlated disorder	46
3.2.2	Doping the leads	48
3.3	Coaxial magnetic field and the perfectly transmitted mode	48
3.4	Perpendicular magnetic field – a higher-order topological insulator	54
4	Probing topological surface states in strained HgTe nanowires	63
4.1	Nanowire devices	64
4.2	Electrostatics of a gated nanowire – local capacitance	65
4.3	Band structure of the gated nanowire	67
4.3.1	Simplified capacitance model	69
4.3.2	Realistic capacitance model	73
4.4	Aharonov-Bohm type oscillations	74
4.5	Subband-induced conductance modulation – extraction of the spin- degeneracy	78
4.5.1	Numerical conductance data	79
4.5.2	Experimental conductance data	81
4.6	Trivial surface states	83

5	Magnetoconductance and Landau levels in topological insulator nanocones	87
5.1	Surface Hamiltonian of the nanocone	87
5.2	Nanocone in magnetic fields	90
5.2.1	Nanocone in coaxial magnetic fields – Landau levels	90
5.2.2	Nanocone in perpendicular magnetic fields – chiral side surface states	95
5.3	Tight-binding Hamiltonian and numerical implementation	96
5.4	Magnetotransport simulations	99
5.4.1	Weak coaxial magnetic fields	100
5.4.2	Strong magnetic fields	102
6	Shaped topological insulator nanowires	107
6.1	Rotationally symmetric topological insulator nanowires	108
6.1.1	Magnetotransport simulations	110
6.2	Coulomb blockade in smoothed topological insulator nanocones .	112
6.2.1	Effective potential of the smoothed nanocone	114
6.2.2	Addition spectrum	115
6.2.3	Experimental realization and concluding remarks	116
6.3	Nanowire constriction with rectangular cross section	117
6.3.1	Non-uniform grid	118
6.3.2	Magnetotransport simulations	122
7	Conclusions	129
A	Appendix	133
A.1	Schrödinger tight-binding Hamiltonian	133
A.2	Local spin rotation	134
A.3	Quantum capacitance	135
A.4	Metric tensor on nanowire surfaces with rotational symmetry . . .	138
	Bibliography	141
	Acronyms	153
