

Abstract	I
Zusammenfassung.....	III
Acknowledgements	V
Table of Contents	VII
List of Figures	XI
List of Tables.....	XIII
1 General Introduction	1
2 Novel approach of phosphate-reclamation as struvite from sewage sludge by utilising hydrothermal carbonization	7
2.1 Abstract	7
2.2 Introduction	8
2.3 Materials and Methods	9
2.3.1 Sewage sludge	9
2.3.2 HTC-Reactions	10
2.3.4 Analytics of feedstocks and hydrochars	11
2.3.5 Analysis of gasphase	11
2.3.6 Phosphate separation - leaching	11
2.3.7 Phosphate recovery - struvite precipitation	12
2.3.8 Analysis of precipitate	12
2.4 Results and discussion.....	12
2.4.1 Sludge conversion to hydrochar	12
2.4.2 Mass balance of C, N and P	13
2.4.3 P-reclamation strategy in HTC process liquid	15
2.4.4 Acid leaching of hydrochar	16
2.4.5 Mixing and precipitation experiments.....	18
2.4.6 Assessment of recovery efficiency.....	20
2.5 Conclusions	20
2.6 References	21
3 Experimental and thermodynamic studies of phosphate behavior during the hydrothermal carbonization of sewage sludge	25
3.1 Abstract	25
3.2 Introduction	26
3.3 Materials and Methods	28
3.3.1 Digested sewage sludge.....	28

3.3.2	Hydrochar and process water from the hydrothermal carbonization of digested sewage sludge.....	28
3.3.3	Characterization of the digested sewage sludge, hydrochar, and process water ...	29
3.3.4	Thermochemical equilibrium calculation.....	29
3.4	Results and Discussion.....	30
3.4.1	Phosphate in digested sewage sludge.....	30
3.4.2	Fate of phosphate.....	32
4.4.3	Distribution of the elements P, Al, Ca, and Fe between hydrochar and process water	33
3.4.4	Distribution of the elements P, Al, Ca, and Fe within different species in hydrochar.....	35
3.4.5	Equilibrium composition.....	38
3.4.6	Possible transformation pathways of phosphate during hydrothermal carbonization	41
3.6	References	44
4	Discussion of classical phosphate extraction schemes to identify speciation in (hydro) thermochemical treated sewage sludge	51
4.1	Abstract	51
4.2	Introduction	52
4.3	Materials and Methods	52
4.3.1	Digested sewage sludge.....	54
4.3.2	Hydrothermal Carbonization (HTC)	54
4.3.3	Fast pyrolysis (FPy).....	55
4.3.4	Slow pyrolysis (SPy).....	55
4.3.5	Sludge and char sample preparation for extractions and analytics	55
4.3.6	Extraction schemes.....	56
4.3.7	CAL-P (Calcium-acetate-lactate soluble phosphate).....	56
4.3.8	Hedley scheme	56
4.3.9	SMT.....	57
4.3.10	Total elements in solids.....	59
4.3.11	Ultimate analysis, ash determination, and pH.....	59
4.3.12	Statistical analysis	59
4.4	Results and Discussion.....	59
4.4.1	Hydrothermal and pyrolytic conversion.....	59
4.4.2	HTC as extraction step?	61
4.4.3	SMT-Protocol.....	62
4.4.4	Comparison of wet and dry conversion.....	64

4.4.5 Hedley scheme and CAL – Plant/Bio availability?..... 65

4.4.6 Labile fraction of P-speciations..... 68

4.5 Conclusion..... 68

4.6 References 69

5 Conclusion..... 75

6 Outlook..... 77

ANNEX A - Supplementary data (chapter 3) 79

Declaration in lieu of an oath on independent work 89

Curriculum vitae..... 91
