1	Introduction	1
2	Uniting Individual Path Dependence and UTAUT: The PDA-UTAUT Model	9
2.1	Introduction to UTAUT	9
2.2	Overview of the Robo-Advisory Adoption Literature	12
2.3	Individual Path Dependence and Technology Adoption	15
2.3.1	The Logic Between Investment and Robo-Advisors	15
2.3.2	Individual Path Dependence	17
2.3.3	Individual Path Dependence and Robo-Advice	21
2.4	The PDA-UTAUT Model	22
2.4.1	The UTAUT Model with Exogenous Path Dependence	23
2.4.2	Endogenizing the Basic Product Adoption	26
3	Adapting the Model to Robo-Advice	31
3.1	The Constructs of the Traditional UTAUT Model	32
3.1.1	Performance Expectancy	32
3.1.2	Effort Expectancy	33
3.1.3	Interpersonal and External Influence	33
3.1.4	Facilitating Conditions	34
3.1.5	Control and Moderator Variables	36
3.2	Personal Factors Extending the UTAUT Model	37
3.2.1	Perceived Privacy Risk	37
3.2.2	Personal Innovativeness	39
3.2.3	Financial Literacy	40
3.3	The Inclusion of Path Dependence Into the Model	42

3.4	Endogenizing the Basic Technology	44
3.4.1	Financial Literacy	44
3.4.2	Ethical Stance Towards the Stock Market	45
3.4.3	Financial Risk Attitude	46
4	Empirical Evaluation of the PDA-UTAUT Model Adapted to Robo-Advisors	49
4.1	Empirical Methodology	50
4.1.1	Online Survey	50
4.1.2	Survey Data Quality Control	50
4.2	Results and Model Evaluation	52
4.2.1	Measurement Model Adaptation and Evaluation	53
4.2.2	Structural Model Adaptation	60
4.2.3	Structural Model Summary	61
4.2.4	Model Evaluation	67
4.3	Hypothesis Testing	69
4.3.1	The classical UTAUT Model with Additional Drivers ...	70
4.3.2	The Addition of path Dependence to the Model	74
4.3.3	Endogenizing path Dependence	76
4.4	Subgroup Analyses	79
4.4.1	Subgroup Analysis Between INRA and NI	80
4.4.2	Subgroup Analysis Between Germany and the USA	82
4.5	Discussion	84
4.5.1	Empirical Findings	84
4.5.2	Practical Implications Based on the Empirical Findings	94
4.5.3	Limitations	96
4.5.4	Future Research	96
5	Incorporating the Supply Side: Product Features of Robo-Advisors	99
5.1	Overview of the Literature on Robo-Advisors' Attributes	102
5.1.1	Human Versus Robot Financial Advisors and Trust Mechanisms	103
5.1.2	Robo-Advisor Characteristics and Customer Acceptance	108
5.1.3	Overview of Other Relevant Literature	114
5.1.4	Davis' Perspective on Objective Features	115

5.2	Empirical Methodology	120
5.2.1	Robo-Advisor Features in Germany and the USA	120
5.2.2	Derivation of Product Features	120
5.3	Results	123
5.3.1	Data Collection	123
5.3.2	Findings	123
5.3.3	Personal Take	133
5.4	Discussion	134
5.4.1	Theoretical Contributions	134
5.4.2	Management Implications	135
5.4.3	Limitations	135
5.4.4	Future Research	136
6	Analyzing Preferences of German and American Consumers using Choice-Based Conjoint Analysis (CBC)	137
6.1	Introduction to Conjoint Analyses (CA)	137
6.1.1	The Development of Conjoint Analyses	138
6.1.2	A primer on Choice-based Conjoint Analyses	142
6.1.3	Introduction to Part-worth Utility Estimation	143
6.2	Empirical Methodology	144
6.2.1	Decision on Attributes Included in the Study	144
6.2.2	Questionnaire Design	145
6.3	Results	148
6.3.1	Data Collection and Cleansing	148
6.3.2	Empirical Strategy	149
6.3.3	Findings	150
6.4	Discussion	176
6.4.1	Theoretical Contributions	176
6.4.2	Management Implications	177
6.4.3	Limitations	179
6.4.4	Future Research	179
7	Studying the Impact of Objective Product Features on the Independent UTAUT Constructs	181
7.1	Empirical Concept	182
7.1.1	Accounting for Features in Models of Technology Acceptance	182
7.1.2	Adapting the Model to Robo-advisor Technology	184
7.1.3	Study Design	188

7.2	Results	189
7.2.1	Online Survey	189
7.2.2	Survey Data Quality Control	190
7.2.3	Findings	191
7.3	Discussion	198
7.3.1	Empirical Findings	198
7.3.2	Management Implications	201
7.3.3	Limitations	201
7.3.4	Future Research	202
8	Summary	203
8.1	Introducing the PDA-UTAUT Model to Account for Path Dependence in Technology Acceptance Research	204
8.1.1	Insights on Individual Path Dependence and Technology Acceptance	204
8.1.2	Integrating Individual Path Dependence into UTAUT Models	205
8.2	Deriving Research Models and Hypotheses	207
8.2.1	Adapting the PDA-UTAUT Model to Robo-advisor Technology	207
8.2.2	An approach to Quantify the Influence of Features on the Demand for Robo-advisory Services	209
8.3	Empirical Findings	210
8.3.1	Empirical Evidence on the Influence of Path Dependence on the Demand for Robo-advisory Services	210
8.3.2	Empirical Evidence on the Influence of features on the Demand for Robo-advisory Services	211
8.4	Practical Implications Drawn from the Empirical Findings	213
8.4.1	Implications for Suppliers of Robo-advisory Services	213
8.4.2	Implications for Governmental Institutions	214
8.5	Limitations and Future Research	215
