SUMMARY III

ZUSAMMENFASSUNG	IV
-----------------------	----

TABLE OF CONTENTS	V
-------------------------	---

LIST OF FIGURES	IX
-----------------------	----

LIST OF TABLES.....	XII
---------------------	-----

LIST OF ABBREVIATIONS	XVIII
-----------------------------	-------

1 INTRODUCTION	1
----------------------	---

1.1 <i>Aspergillus oryzae</i>	1
-------------------------------------	---

1.1.1 The genus <i>Aspergillus</i>	1
--	---

1.1.2 Historical use and <i>Aspergillus oryzae</i> in nutrition	1
---	---

1.1.3 Genome sequencing of <i>Aspergillus oryzae</i>	2
--	---

1.1.4 Safety of <i>Aspergillus oryzae</i>	3
---	---

1.1.5 Fermentation and adaption to stress in <i>Aspergillus</i> species	5
---	---

1.1.5.1 Solid state and submerge fermentation	5
---	---

1.1.5.2 Stress response during fermentation	5
---	---

1.1.5.3 PacC-pH signalling pathway.....	6
---	---

1.2 Postbiotics – a new term in the field “biotics”	7
---	---

1.2.1 From pre- and probiotics to postbiotics	7
---	---

1.2.2 Possible bioactive compounds in <i>Aspergillus oryzae</i> fermentation extracts	8
--	---

1.2.2.1 Cell wall fragments of <i>Aspergillus</i> species.....	8
--	---

1.2.2.2 <i>Aspergillus oryzae</i> as a tool for enzyme production.....	13
--	----

1.2.2.3 Primary and secondary metabolites produced by <i>Aspergillus</i> <i>oryzae</i>	19
---	----

1.2.2.4 Extracellular polymeric substances	22
--	----

1.2.1 <i>Aspergillus oryzae</i> as a postbiotic.....	25
--	----

1.3 Host-pathogen interactions: Recognition of <i>Aspergillus</i> cell wall components by immune receptors	26
---	----

1.3.1 Immune receptors involved in the recognition of fungi.....	26
--	----

1.3.1.1 Toll- like receptors	28
------------------------------------	----

1.3.1.2 C-type lectin receptor	29
--------------------------------------	----

1.3.2 Crosstalk of Toll-like receptor and C-type lectin receptor	30
--	----

1.3.3 Trained immunity	31
------------------------------	----

1.4 Model organism <i>Drosophila melanogaster</i>	33
---	----

1.4.1 The immune response of <i>Drosophila</i>	33
--	----

1.4.2 Using of <i>Drosophila melanogaster</i> in microbiome studies	36
---	----

Table of contents

1.5 Objectives of the study	37
2 MATERIAL AND METHODS	38
2.1 Chemicals, kits, buffers, software & laboratory equipment	38
2.2 Fermentation time studies	44
2.2.1 Sample description	44
2.2.2 Determination of turbidity	44
2.2.3 Antioxidant experiments.....	45
2.2.3.1 Determination of total phenol content	45
2.2.3.2 Ferric reducing antioxidant power assay	45
2.2.3.3 Trolox equivalent antioxidant capacity assay.....	45
2.2.4 Primary and secondary metabolite analysis	46
2.2.4.1 Quantification of amino acids	46
2.2.4.2 Gas chromatography time-of-flight mass spectrometry analysis for metabolic profiling.....	47
2.2.4.3 Liquid chromatography mass spectrometry analyses for metabolic profiling.....	48
2.2.4.4 Data processing	49
2.2.5 Enzymatic activity	49
2.2.5.1 Amylase activity	49
2.2.5.2 Xylanase activity	49
2.2.5.3 Protease activity.....	50
2.2.5.4 Lipase activity	50
2.2.6 Immunomodulatory experiments	50
2.2.6.1 HEK-reporter cell lines	50
2.2.6.2 Neutral red assay.....	51
2.2.6.3 Extraction and precipitation experiments.....	52
2.2.6.3.1 Acetone precipitation.....	52
2.2.6.3.2 Extraction with ethyl acetate.....	52
2.2.6.4 Size exclusion chromatography.....	52
2.2.6.4.1 Determination of proteins	53
2.2.6.4.2 Determination of reducing sugars.....	53
2.2.6.4.3 Determination of galactomannan.....	53
2.2.6.4.4 Protein digestion	54
2.2.7 Trained immunity assay with human monocytes	54
2.2.7.1 Isolation of human monocytes.....	54
2.2.7.2 Trained immunity assay	55
2.2.8 Glycosidic linkage analysis	56
2.2.9 One-dimensional proton nuclear magnetic resonance	57
2.2.9.1 Sample preparation.....	57
2.2.9.2 Nuclear magnetic resonance spectroscopy.....	57
2.3 Phenotyping in <i>Drosophila melanogaster</i>	57
2.3.1 Fly cultivation and maintenance.....	57
2.3.2 Feeding protocol and experimental diets.....	58
2.3.3 Determination of body weight and body composition of flies	58
2.3.4 <i>Aspergillus oryzae</i> supplementation on starch-based diet.....	59
2.3.5 Determination of the metabolic rate of flies	60

Table of contents

2.3.6 Food preference assay	60
2.3.7 Double-choice oviposition preference assay	60
2.3.8 Determination of reproductive performance	61
2.3.9 Heat stress challenge assay	61
2.3.10 Isolation and sequencing of RNA from heat-stressed flies	62
2.3.11 Microbiome analysis	63
2.3.11.1 Testing for infection with <i>Wolbachia</i>	63
2.3.11.2 Preparation of the bacterial mix for recolonization of germ-free fly embryos	63
2.3.11.3 Generation of gnotobiotic flies by dechoronisation and recolonization	64
2.3.11.4 Experimental setup of gnotobiotic flies	64
2.3.11.5 DNA isolation	65
2.3.11.6 Analysis of MiSeq16S rRNA gene sequencing data	66
2.3.12 Mineral studies	67
3 RESULTS	68
3.1 Objective 1: Investigate the impact of a two-step fermentation process	68
3.1.1 pH increase during fermentation changes the antioxidant capacity and metabolomic pattern of <i>Aspergillus oryzae</i> broth	68
3.1.1.1 The pH stress during fermentation changed the colour of <i>Aspergillus oryzae</i> samples	68
3.1.1.2 The pH stress during fermentation significantly increased the <i>in</i> <i>vitro</i> antioxidant capacity of <i>Aspergillus oryzae</i> samples	68
3.1.1.3 The pH stress during fermentation significantly reduced the content of amino acids in <i>Aspergillus oryzae</i> samples	69
3.1.1.4 Enzymatic or inhibiting activity of pre- and post-stress <i>Aspergillus</i> <i>oryzae</i> samples	72
3.1.1.5 The pH stress during fermentation led to distinct metabolic patterns of <i>Aspergillus oryzae</i> samples	73
3.1.2 The pH stress during fermentation is required for the immune- modulatory activity of the <i>Aspergillus oryzae</i> extract	81
3.1.2.1 Solely post-stress AO samples showed hTLR2, hTLR4, and hDectin-1a activating activities	81
3.1.2.2 The hTLR2- and hTLR4-activating molecule(s) are water soluble and can be precipitated with acetone	81
3.1.2.3 Separation of post-stress <i>Aspergillus oryzae</i> samples by size exclusion chromatography revealed two distinct fractions with hTLR and hDectin-1a receptor activating activity	83
3.1.2.4 Pre- and post-stress <i>Aspergillus oryzae</i> samples contain α - and β - glucans with slightly different peaks intensities in the anomeric region	85
3.1.2.5 Polysaccharides in post-stress <i>Aspergillus oryzae</i> samples are built of three monosaccharides	88
3.1.2.6 The pH-stress during fermentation caused cytotoxicity of <i>Aspergillus oryzae</i> towards isolated human monocytes	88
3.1.3 The impact of post-stress <i>Aspergillus oryzae</i> samples on tumor necrosis factor- α secretion in an <i>ex vivo</i> trained immunity model	89
3.2 Objective 2: Nutritional phenotyping in <i>Drosophila melanogaster</i>	91

Table of contents

3.2.1 The post-stress <i>Aspergillus oryzae</i> sample did not affect the biological fitness of non-stressed flies.....	91
3.2.2 Supplementation of the pre- and post-stress <i>Aspergillus oryzae</i> extract improved digestibility of dietary starch in the fruit fly model.....	91
3.2.3 The supplementation of post-stress <i>Aspergillus oryzae</i> extract improved egg production of flies	92
3.2.4 The supplementation of the post-stress <i>Aspergillus oryzae</i> samples improved tolerance to heat stress in flies	93
3.2.5 Heat tolerance in AO-treated flies is associated with altered gene expression profiles	93
3.2.6 The status of mineral and trace elements in <i>Drosophila melanogaster</i> were largely unaffected by post-stress <i>Aspergillus oryzae</i> supplementation	95
3.2.7 The pH stress during fermentation of <i>Aspergillus oryzae</i> did not affect the <i>Drosophila</i> microbiome	98
4 DISCUSSION.....	103
4.1 The pH stress during <i>Aspergillus oryzae</i> fermentation altered the metabolome with consequences for bioactivity	103
4.2 Different enzymatic and enzyme inhibitory activity in pre – and post-stress <i>Aspergillus oryzae</i> samples.....	110
4.3 The pH increase during fermentation leads to immunomodulatory activity in post-stress <i>Aspergillus oryzae</i> samples.....	111
4.4 The dual role of the post-stress <i>Aspergillus oryzae</i> extract on cytotoxicity and potential therapeutic applications in trained immunity	114
4.5 Confirming the health benefits of the post-stress <i>Aspergillus oryzae</i> extract using the model organism <i>Drosophila melanogaster</i>	115
5 CONCLUSION & OUTLOOK.....	120
6 APPENDIX.....	122
