Contents

1 The Function of Telecommunications 1

1.1 Types of Communication 1
1.2 Information Types and Signals 1
1.3 Systems for Interactive Communication 3
1.4 Development of the Communication Networks. 3
1.4.1 Existing Communication Networks. 3
1.4.2 Integration of Services 4
1.4.3 Flexibility and Network Intelligence 5
1.5 The ISDN Concept 6
1.6 The Integration of Services with Higher Bit Rates. 8
1.7 The Importance of Standardization. 9

2 Telecommunication Services 11

2.1 Definition of Services. 11
2.2 Definition of Service Attributes and Supplementary Services . . 17
2.3 Services in the ISDN with Bit Rates up to 64 kbit/s 19
2.3.1 ISDN Services up to 64 kbit/s via B-Channels 19
2.3.1.1 Conversational Bearer Services. 19
2.3.1.2 Conversational Teleservices 19
2.3.1.3 Messaging Services 22
2.3.1.4 Retrieval Services (Teleservices). 23
2.3.1.5 Distribution Services 23
2.3.2 ISDN Services via the D-Channel 24
2.3.2.1 Conversational Bearer Services with Low Throughput 24
2.3.2.2 Conversational Teleservices 24
2.3.3 Supplementary Services 24
2.3.4 Existing Services from the Telephone Network in the ISDN 29
2.3.5 Services in Conjunction with Terminals from Dedicated Text and Data Networks 30
2.4 Service and Network Interworking Facilities 31
2.4.1 Intercommunication Within the ISDN 31

2.4.2 Intercommunication Using Network Interworking Facilities 32
2.5 Services with Higher Bit Rates 32

3 ISDN Structure 34

3.1 Network Organization 34
3.2 Initial Situation for the ISDN. 35
3.2.1 Telephone Network 36
3.2.2 Text and Data Networks 37
3.3 Functions of the ISDN Network Components 38
3.3.1 Subscriber Lines in the ISDN. 38
3.3.2 Local Exchanges in the ISDN 39
3.3.3 Signaling Between ISDN Exchanges 39
3.3.4 Operation and Maintenance in the ISDN 40
3.4 Network Dimensioning 40
3.4.1 Basic Considerations 40
3.4.2 Effects of Service Integration 42
3.4.2.1 Holding Time, Traffic Intensity, Busy Hour Call Attempts 42
3.4.2.2 Shared Use of the Network Equipment. 44
3.4.3 Traffic Routing 44
3.5 Interworking with Other Public Networks 46
3.5.1 ISDN and the Analog Telephone Network 46
3.5.2 ISDN and Public Data Networks 47
3.6 Interworking with Private Networks 48
3.7 Numbering 48
3.8 Implementation Strategies 49
3.8.1 Overlay Network and Cell Approach 50
3.8.2 Pragmatic Implementation Strategy 51
3.8.3 Satellite Links in the ISDN 53
3.9 ISDN Implementation Schedules. 54

4 Subscriber Access 56

4.1 Configuration of the User Station 56
4.1.1 Functional Groups of the User Station 56
4.1.2 Network Termination NT1 58
4.1.3 Network Termination NT2 59
4.1.4 Terminal Adaptor TA 61
4.1.5 Connecting Private Networks. 61
4.2 User-Network Interfaces 63
4.2.1 Preliminary Remarks. 63

4.2.1.1 Channel Types 64
4.2.1.2 Access Types and Interface Structures 65
4.2.1.3 Operation of Traffic Channels 66
4.2.2 User-Network Interface for the Basic Access 67
4.2.2.1 Reference Configurations 67
4.2.2.2 Electrical Characteristics for Information Transmission 69
4.2.2.3 D-Channel Access by Terminal Equipments . . . 70
4.2.2.4 Frame Structure 72
4.2.2.5 Activation and Deactivation. 74
4.2.2.6 Electrical Characteristics for Power Feeding . . . 75
4.2.3 User-Network Interface for the Primary Rate Access . . 76
4.3 User Signaling 78
4.3.1 Protocol Architecture. 79
4.3.2 Types of Connection 80
4.3.3 Special Features of ISDN Signaling 83
4.3.3.1 Functions of the Network Terminations NT1 and NT2 83
4.3.3.2 Call Establishment 83
4.3.3.3 Bus Configurations 86
4.3.3.4 Simultaneous Signaling Activities 87
4.3.4 Link Access Procedure on the D-Channel 88
4.3.4.1 Features of the Data Link Layer 88
4.3.4.2 Data Transfer Protocol 89
4.3.4.3 Assignment of Unique Terminal Endpoint Identifiers 90
4.3.5 Signaling for Circuit-Switched Connections 91
4.3.5.1 Simple Call Establishment 91
4.3.5.2 Simple Call Clearing 93
4.3.5.3 Refined Call Establishment and Clearing 94
4.3.5.4 Control of Supplementary Services 95
4.3.5.5 User-User Signaling 95
4.3.5.6 Stimulus Protocol 95
4.4 Connection of Terminals with Conventional Interfaces to the ISDN 99
4.4.1 ISDN Bearer Service and Public Data Network Access Solutions 102
4.4.2 Connection of X.21 Terminal Equipment with Single-Step Call Establishment 105
4.4.2.1 Mapping of the Call Establishment and Clearing Procedures Between the X.21 and S Interfaces 105
4.4.2.2 Adaption Between the X.1 User Rates of X.21 Terminal Equipment and the ISDN Information Transfer Rate of 64 kbit/s 105

4.4.2.3 Ready for Data Alignment in the 64 kbit/s Channel Between the Terminal Adaptors and Between the X.21 Terminal Equipments . . . 108
4.4.3 Connection of Data Terminal Equipment with V.-Series Type Interfaces to the ISDN . . . 108
4.4.3.1 Support of the Analog Tip/Ring Interface in the ISDN . . . 109
4.4.3.2 Support of V.-Series Interfaces in the ISDN . . . 109
4.4.4 Connection of Terminals with X.25 Interface to the ISDN . . . 110
4.4.4.1 Basic Characteristics . . . 110
4.4.4.2 Point-to-Multipoint Signaling for Incoming Virtual Calls . . . 114
4.4.4.3 Access to Packet Switching via the B-Channel . . . 115
4.4.4.4 Access to Packet Switching via the Signaling Channel (D-Channel) . . . 115
4.5 Packet Switching Techniques in ISDN . . . 119
4.5.1 Frame Mode Bearer Services . . . 122
4.5.2 Asynchronous Transfer Mode . . . 123
4.5.3 Conclusion and Outlook . . . 125

5 ISDN Terminals . . . 127

5.1 Introductory Remarks . . . 127
5.2 Basic Features of an ISDN Terminal . . . 129
5.3 Single-Service Terminals Connected to the ISDN . . . 130
5.3.1 ISDN Telephone . . . 130
5.3.2 Terminals for Non-Voice Communication in the ISDN . . . 132
5.4 Multi-Service Terminals . . . 135
5.4.1 Multi-Service Terminals for Telephony and Telematic Services . . . 135
5.4.2 Multi-Service Terminals for Telephony and Image Communication . . . 137

6 Switching in the ISDN . . . 138

6.1 Introduction . . . 138
6.2 New Demands Placed on Switching Due to Service Integration in the ISDN . . . 146
6.2.1 Subscriber Access . . . 146
6.2.2 Trunk Access . . . 149
6.2.3 Switching Network . . . 149
6.2.4 User-Network Signaling . . . 153

6.2.5 Control 154
6.2.6 Interexchange Signaling 155
6.2.7 Operations, Administration and Maintenance 155
6.2.8 Timing and Network Synchronization 157
6.2.9 Interworking and Access to Special Equipment. 158
6.3 Interexchange Signaling in the ISDN 158
6.3.1 Basic Characteristics of Interexchange Signaling Using CCITT Signaling System No. 7 158
6.3.2 The Message Transfer Part (MTP) 161
6.3.3 Signaling Relations Between ISDN Exchanges 162
6.3.4 Protocol Architecture of ISDN Interexchange Signaling . 165
6.3.5 Implementation of ISDN Interexchange Signaling in the Exchange 169
6.3.6 Intelligent Network 170
6.3.6.1 Flexible Service Control Architecture 170
6.3.6.2 Transaction Capabilities via CCITT Signaling System No. 7 171
6.4 Corporate ISDN Networks 171
6.4.1 Fundamental Solutions 171
6.4.2 Structure and Features of an ISDN PABX 173
6.4.3 Tie Line Traffic Between ISDN PABXs 178

7 Transmission Methods in the ISDN 182

7.1 Introductory Remarks 182
7.2 The Hierarchy of Digital Transmission Channels 182
7.2.1 Basic Building Block: 64 kbit/s 182
7.2.2 Primary Multiplex Signals 184
7.2.3 Digital Multiplex Hierarchies 186
7.3 Transmission Media 187
7.3.1 Conductors in Cables 188
7.3.2 Radio Relay 189
7.4 Equipment for Transmitting Digital Signals on Cable and Radio Links 190
7.4.1 General 190
7.4.2 Transmission on Cables in Trunk Circuits 192
7.4.3 Transmission on Subscriber Lines 193
7.4.4 Radio Relay Transmission 198
7.5 Multiplexed Signals and Multiplexing Equipment. 198
7.5.1 Synchronous Multiplexed Signals 198
7.5.2 Digital Multiplexers 199
7.6 Network Synchronization 200
7.6.1 Necessity for Network Synchronization 200

7.6.2 Achieving Network Synchronization 201
7.6.3 Clock Supply Requirements 203
7.7 Disturbances and Transmission Performance 204
7.7.1 Effect of Bit Errors 204
7.7.2 Effect of Slips 206
7.7.3 Effect of Signal Delay 207
7.7.4 Effect of Jitter and Wander 208
7.7.5 Performance of 64 kbit/s Connection Types in the ISDN 208

8 ISDN – The User's View 210

8.1 ISDN in the Office 210
8.1.1 Telephone Communication 210
8.1.2 Non-Voice Communication 211
8.1.2.1 Significance of Service Integration. 211
8.1.2.2 Transmission Speed 213
8.1.2.3 Message Structure 214
8.2 ISDN in the Home 215
8.3 ISDN in Mobile Communication 218

Annex: CCITT Recommendations and Other Standards Relating to the ISDN 220
