1	Free Particles	1
1.1	Dirac's Approach	2
1.2	The Formalism of Quantum Mechanics	4
1.2.1	Observables and States	4
1.2.2	Time Evolution	5
1.2.3	Interpretation	5
1.3	The Dirac Equation and Quantum Mechanics	6
1.3.1	A Hilbert Space for the Dirac Equation	6
1.3.2	Position and Momentum	7
1.3.3	Some Other Observables	8
1.4	The Free Dirac Operator	9
1.4.1	The Free Dirac Operator in Fourier Space	9
1.4.2	Spectral Subspaces of H_0	10
1.4.3	The Foldy-Wouthuysen Transformation	11
1.4.4	Self-adjointness and Spectrum of H_0	11
1.4.5	The Spectral Transformation	13
1.4.6	Interpretation of Negative Energies	14
1.5	The Free Time Evolution	15
1.6	Zitterbewegung	18
1.6.1	The Velocity Operator	19
1.6.2	Time Evolution of the Standard Position Operator	20
1.6.3	Evolution of the Expectation Value	21
1.6.4	Evolution of Angular Momenta	22
1.6.5	The Operators F and G	23
1.7	Relativistic Observables	24
1.7.1	Restriction to Positive Energies	24
1.7.2	Operators in the Foldy-Wouthuysen Representation	25
1.7.3	Notions of Localization	26
1.8	Localization and Acausality	28
1.8.1	Superluminal Propagation	28
1.8.2	Violation of Einstein Causality	30
1.8.3	Support Properties of Wavefunctions	31
1.8.4	Localization and Positive Energies	32
1.9	Approximate Localization	32
1.9.1	The Nonstationary Phase Method	33
1.9.2	Propagation into the Classically Forbidden Region	34
	Appendix	35

1.A	Alternative Representations of Dirac Matrices	35
1.B	Basic Properties of Dirac Matrices	37
1.C	Commutators with H_0	37
1.D	Distributions Associated with the Evolution Kernel	38
1.E	Explicit Form of the Resolvent Kernel	39
1.F	Free Plane-Wave Solutions	39
2	The Poincaré Group	42
2.1	The Lorentz and Poincaré Groups	43
2.1.1	The Minkowsky Space	43
2.1.2	Definition of the Lorentz Group	44
2.1.3	Examples of Lorentz Transformations	44
2.1.4	Basic Properties of the Lorentz Group	46
2.1.5	The Poincaré Group	47
2.1.6	The Lie Algebra of the Poincaré Group	48
2.2	Symmetry Transformations in Quantum Mechanics	50
2.2.1	Phases and Rays	50
2.2.2	The Wigner-Bargmann Theorem	51
2.2.3	Projective Representations	51
2.2.4	Representations in a Hilbert Space	52
2.2.5	Lifting of Projective Representations	53
2.3	Lie Algebra Representations	54
2.3.1	The Lie Algebra and the Gårding Domain	55
2.3.2	The Poincaré Lie Algebra	56
2.3.3	Integration of Lie Algebra Representations	58
2.3.4	Integrating the Poincaré Lie Algebra	60
2.4	Projective Representations	62
2.4.1	Representations of the Covering Group	62
2.4.2	A Criterion for the Lifting	64
2.4.3	The Cohomology of the Poincaré Lie Algebra	65
2.4.4	Relativistic Invariance of the Dirac Theory	67
2.5	The Covering Group of the Lorentz Group	67
2.5.1	$SL(2)$ and Lorentz Group	68
2.5.2	Rotations and Boosts	69
2.5.3	Nonequivalent Representations of $SL(2)$	70
2.5.4	Linear Representation of the Space Reflection	71
2.5.5	Gamma Matrices	72
2.5.6	Equivalent Representations	73
2.5.7	Time Reversal and Space-Time Reflections	75
2.5.8	A Covering Group of the Full Poincaré Group	76
	Appendix	77
2.A	Algebra of Gamma Matrices	77
2.B	Basic Properties of Gamma Matrices	78
2.C	Commutation Formulas	79
2.D	Dirac-Matrix Representation of Lorentz Transformations	79

2.E	Expansion of Products of Gamma Matrices	79
2.F	Formulas with Traces	80
3	Induced Representations	81
3.1	Mackey's Theory of Induced Representations	82
3.1.1	Induced Representations of Lie Groups	82
3.1.2	A Strategy for Semidirect Products	83
3.1.3	Characters and the Dual Group	84
3.1.4	The Dual Action of the Poincaré Group	85
3.1.5	Orbits and Isotropy Groups	86
3.1.6	Orbits of the Poincaré Group	87
3.1.7	Invariant Measure and Little Group	88
3.1.8	Induced Representations of the Poincaré Group	88
3.2	Wigner's Realization of Induced Representations	89
3.2.1	Wigner States	89
3.2.2	Wigner States for the Poincaré Group	90
3.2.3	Irreducibility of the Induced Representation	92
3.2.4	Classification of Irreducible Representations	93
3.2.5	The Defining Representation of the Little Group ...	93
3.3	Covariant Realizations and the Dirac Equation	94
3.3.1	Covariant States	94
3.3.2	Covariant States for the Poincaré Group	95
3.3.3	Invariant Subspaces	95
3.3.4	The Scalar Product in the Invariant Subspaces	96
3.3.5	Covariant Dirac Equation	97
3.3.6	The Configuration Space	98
3.3.7	Poincaré Transformations in Configuration Space ..	99
3.3.8	Invariance of the Free Dirac Equation	100
3.3.9	The Foldy-Wouthuysen Transformation	101
3.4	Representations of Discrete Transformations	102
3.4.1	Projective Representations of the Poincaré Group ..	102
3.4.2	Antiunitarity of the Time Reversal Operator	104
4	External Fields	106
4.1	Transformation Properties of External Fields	107
4.1.1	The Potential Matrix	107
4.1.2	Poincaré Covariance of the Dirac Equation	107
4.2	Classification of External Fields	108
4.2.1	Scalar Potential	108
4.2.2	Electromagnetic Vector Potential	108
4.2.3	Anomalous Magnetic Moment	109
4.2.4	Anomalous Electric Moment	110
4.2.5	Pseudovector Potential	111
4.2.6	Pseudoscalar Potential	111
4.3	Self-adjointness and Essential Spectrum	112
4.3.1	Local Singularities	112

4.3.2	Behavior at Infinity	113
4.3.3	The Coulomb Potential	114
4.3.4	Invariance of the Essential Spectrum and Local Compactness	114
4.4	Time Dependent Potentials	117
4.4.1	Propagators	117
4.4.2	Time Dependence Generated by Unitary Operators	118
4.4.3	Gauge Transformations	119
4.5	Klein's Paradox	120
4.6	Spherical Symmetry	122
4.6.1	Assumptions on the Potential	122
4.6.2	Transition to Polar Coordinates	123
4.6.3	Operators Commuting with the Dirac Operator	125
4.6.4	Angular Momentum Eigenfunctions	126
4.6.5	The Partial Wave Subspaces	128
4.6.6	The Radial Dirac Operator	129
4.7	Selected Topics from Spectral Theory	131
4.7.1	Potentials Increasing at Infinity	131
4.7.2	The Virial Theorem	134
4.7.3	Number of Eigenvalues	136
5	Supersymmetry	138
5.1	Supersymmetric Quantum Mechanics	139
5.1.1	The Unitary Involution τ	139
5.1.2	The Abstract Dirac Operator	139
5.1.3	Associated Supercharges	140
5.2	The Standard Representation	141
5.2.1	Some Notation	141
5.2.2	Nelson's Trick	142
5.2.3	Polar Decomposition of Closed Operators	143
5.2.4	Commutation Formulas	145
5.3	Self-adjointness Problems	145
5.3.1	Essential Self-adjointness of Abstract Dirac Operators	145
5.3.2	Particles with an Anomalous Magnetic Moment	147
5.4	Dirac Operators with Supersymmetry	149
5.4.1	Basic Definitions and Properties	149
5.4.2	Standard Representation	151
5.5	Examples of Supersymmetric Dirac Operators	151
5.5.1	Dirac Operator with a Scalar Field	151
5.5.2	Supersymmetry in Electromagnetic Fields	152
5.5.3	The Klein-Gordon Equation	153
5.6	Normal Forms of Supersymmetric Dirac Operators	154
5.6.1	The Abstract Foldy-Wouthuysen Transformation	154
5.6.2	The Abstract Cini-Touschek Transformation	156
5.6.3	Connection with the Cayley Transform	157

5.7	The Index of the Dirac Operator	158
5.7.1	The Fredholm Index	158
5.7.2	Regularized Indices	159
5.8	Spectral Shift and Witten Index	161
5.8.1	Krein's Spectral Shift Function	161
5.8.2	The Witten Index and the Axial Anomaly	165
5.8.3	The Spectral Asymmetry	166
5.9	Topological Invariance of the Witten Index	167
5.9.1	Perturbations Preserving Supersymmetry	167
5.9.2	Invariance of the Index Under Perturbations	167
5.10	Fredholm Determinants	170
5.11	Regularized Indices in Exactly Soluble Models	173
5.11.1	Scalar Potential in One Dimension	173
5.11.2	Magnetic Field in Two Dimensions	174
5.11.3	Callias Index Formula	174
6	The Nonrelativistic Limit	176
6.1	c-Dependence of Dirac Operators	177
6.1.1	General Setup	177
6.1.2	Supersymmetric Dirac Operators	178
6.1.3	Analyticity of the Resolvent	180
6.1.4	Nonrelativistic Limit with Anomalous Moments	182
6.2	c-Dependence of Eigenvalues	183
6.2.1	Browsing Analytic Perturbation Theory	183
6.2.2	The Reduced Dirac Operator	186
6.2.3	Analyticity of Eigenvalues and Eigenfunctions	187
6.2.4	First Order Corrections of Nonrelativistic Eigenvalues	188
6.2.5	Interpretation of the First Order Correction	188
6.2.6	Example: Separable Potential	191
7	Special Systems	193
7.1	Magnetic Fields	194
7.1.1	Introduction	194
7.1.2	Dirac and Pauli Operators	194
7.1.3	Homogeneous Magnetic Field	196
7.2	The Ground State in a Magnetic Field	198
7.2.1	Two Dimensions	198
7.2.2	Three Dimensions	199
7.2.3	Index Calculations	200
7.3	Magnetic Fields and the Essential Spectrum	202
7.3.1	Infinitely Degenerate Threshold Eigenvalues	202
7.3.2	A Characterization of the Essential Spectrum	203
7.3.3	Cylindrical Symmetry	206
7.4	The Coulomb Problem	208
7.4.1	The Hidden Supersymmetry	208
7.4.2	The Ground State	210

7.4.3	Excited States	211
7.4.4	The BJL Operator	214
7.4.5	Discussion	216
7.4.6	Stationary Coulomb Scattering	219
8	Scattering States	222
8.1	Preliminaries	223
8.1.1	Scattering Theory	223
8.1.2	Wave Operators	224
8.1.3	The Scattering Operator	225
8.2	Asymptotic Observables	226
8.2.1	Introduction	227
8.2.2	Invariant Domains	228
8.2.3	RAGE	230
8.2.4	Asymptotics of Zitterbewegung	230
