

Contents

The chapter headings listed below correspond to the main text: *Computational Techniques for Fluid Dynamics I/II*. Only those chapters containing problems are given; the page numbers are those on which the solutions to the problems can be found in the manual.

2. Partial Differential Equations	1
3. Preliminary Computational Techniques	8
4. Theoretical Background	15
5. Weighted Residual Methods	27
6. Steady Problems	40
7. One-Dimensional Diffusion Equation	57
8. Multidimensional Diffusion Equation	78
9. Linear Convection-Dominated Problems	90
10. Nonlinear Convection-Dominated Problems	113
11. Fluid Dynamics: The Governing Equations	137
12. Generalised Curvilinear Coordinates	146
13. Grid Generation	159
14. Inviscid Flow	172
15. Boundary Layer Flow	194
16. Flows Governed by Reduced Navier-Stokes Equations	219
17. Incompressible Viscous Flow	227
18. Compressible Viscous Flow	240
