

Contents

Preface

Introduction	1
1 Historical Development and Current Trends in Organometallic Chemistry	1
2 Demarcation and Classification of Organometallic Compounds	7
3 Energy, Polarity and Reactivity of the M–C Bond	10
3.1 Stability of Main-Group Organometallics	10
3.2 Lability of Main-Group Organometallics	12

MAIN-GROUP ORGANOMETALLICS

4 Methods of Preparation in Perspective	15
5 Alkali Organometallics	19
5.1 Organolithium Compounds	19
Excursion: ^6Li - and ^7Li -NMR of Organolithium Compounds	24
5.2 Organyls of the Heavier Alkali Metals	33
Excursion: ESR Spectroscopy of Organoalkali Metal Compounds	35
6 Organometallics of Groups 2 and 12	38
6.1 Organometallics of the Alkaline Earths (Group 2)	38
6.1.1 Organoberyllium Compounds	38
6.1.2 Organomagnesium Compounds	40
6.1.3 Organocalcium, -strontium and -barium Compounds	47
6.2 Organometallics of Zn, Cd, Hg (Group 12)	48
6.2.1 Organozinc Compounds	48
6.2.2 Organocadmium Compounds	50
6.2.3 Organomercury Compounds	50
Excursion: Organomercury Compounds in vivo	54
7 Organometallics of the Boron Group (Group 13)	57
7.1 Organoboron Compounds	57
7.1.1 Organoboranes	57

7.1.2	Boron Heterocycles	62
7.1.3	Polyhedral Boranes, Carbaboranes and Heterocarbaboranes	66
Excursion: ^{11}B -NMR of Organoboron Compounds		73
7.2	Organoaluminum Compounds	75
7.3	Gallium-, Indium-, and Thallium Organyls	86
7.3.1	σ Organyls of Ga, In, Tl and their Lewis-Base Adducts	86
7.3.2	π Complexes of Ga, In, and Tl	89
7.3.3	Applications of Thallium Organyls in Organic Synthesis	92
8 Organoelement Compounds of the Carbon Group (Group 14)		94
8.1	Organosilicon Compounds	95
8.1.1	Silicon Organyls of Coordination Number 4	95
8.1.2	Silicon Organyls of Coordination Numbers 2 and 3 and their Subsequent Products	105
8.2	Organogermanium Compounds	115
8.2.1	Germanium Organyls of Coordination Number 4	115
8.2.2	Germanium Organyls of Coordination Numbers 2 and 3 and their Subsequent Products	118
8.3	Organotin Compounds	121
Excursion: ^{119}Sn -Mössbauer and ^{119}Sn -NMR Spectroscopy		122
8.3.1	Sn Organyls of Coordination Numbers 4, 5, and 6	124
8.3.2	Sn Organyls of Coordination Numbers 2 and 3	131
8.4	Organolead Compounds	137
8.4.1	Pb^{IV} Organyls	138
8.4.2	Pb^{III} - and Pb^{II} Organyls	143
9 Organoelement Compounds of the Nitrogen Group (Group 15)		147
9.1	Element ^V Organyls (E = As, Sb, Bi)	148
9.1.1	Pentaorganoelement Compounds R_5E	148
9.1.2	Organoelement Derivatives $\text{R}_n\text{EX}_{5-n}$	150
9.2	Element ^{III} Organyls (E = As, Sb, Bi)	152
9.2.1	Trisorganoelement Compounds R_3E	152
9.2.2	Organoelement Derivatives $\text{R}_n\text{EX}_{3-n}$	155
9.3	Chains and Rings containing E – E Single Bonds	157
9.4	E = C and E = E Multiple Bonds	161
9.4.1	E = C ($p_\pi - p_\pi$) Bonds	161
9.4.2	E = E ($p_\pi - p_\pi$) Bonds	165
10 Organoelement Compounds of Selenium and Tellurium (Group 16)		167
11 Organometallics of Copper, Silver and Gold (Group 11)		172
11.1	Copper- and Silver Organyls	172
11.2	Gold Organyls	178

ORGANOMETALLIC COMPOUNDS OF THE TRANSITION ELEMENTS

12 The 18-Valence-Electron (18-VE) Rule	186
Excursion: Can the VSEPR concept (valence shell electron-pair repulsion, Gillespie-Nyholm model) be applied to transition-metal complexes?	191
13 σ-Donor Ligands	193
13.1 Preparation of Transition-Metal Alkyls and Aryls	194
13.2 Selected Properties of Transition-Metal σ -Organometallics	197
13.2.1 Thermodynamic Stability versus Kinetic Lability	197
13.2.2 Transition-Metal σ -Complexes in vivo	201
13.2.3 Transition-Metal Perfluorocarbon σ -Complexes	204
14 σ-Donor/π-Acceptor Ligands	206
14.1 Transition-Metal Alkenyls	206
14.2 Transition-Metal Alkynyls	208
14.3 Transition-Metal Carbene Complexes	210
14.4 Transition-Metal Carbyne Complexes	218
14.5 Metal Carbonyls	220
14.5.1 Preparation, Structure and Properties	221
14.5.2 Variants of CO Bridging	222
14.5.3 Bonding in Metal Carbonyls, Theory and Experimental Evidence	226
14.5.4 Principal Reaction Types of Metal Carbonyls	232
14.5.5 Carbonylmatalates and Carbonyl Metal Hydrides	234
14.5.6 Carbonyl Metal Halides	237
14.6 Thio-, Seleno-, and Tellurocarbonyl Metal Complexes	238
14.7 Isocyanide Complexes (Metal Isonitriles)	240
Excursion: Photochemical Reactivity of Organotransition Metal Complexes	242
15 σ, π-Donor/π-Acceptor Ligands	252
15.1 Olefin Complexes	252
15.1.1 Homoalkene Complexes	252
15.1.2 Heteroalkene Complexes	270
15.2 Alkyne Complexes	272
15.2.1 Homoalkyne Complexes	273
15.2.2 Heteroalkyne Complexes	279
15.3 Allyl and Enyl Complexes	279
15.3.1 Allyl Complexes	280
15.3.2 Dienyl and Trienyl Complexes	289
Excursion: ^{13}C - and ^1H -NMR Spectroscopy of Organometallics	295
15.4 Complexes of the Cyclic π -Perimeters C_nH_n	309
15.4.1 C_3R_3^+ as a Ligand	310
15.4.2 C_4H_4 as a Ligand	311
15.4.3 C_5H_5^- as a Ligand	315

15.4.3.1	Binary Cyclopentadienyl Transition-Metal Complexes	316
15.4.3.2	Cyclopentadienyl Metal Carbonyls	333
15.4.3.3	Cyclopentadienyl Metal Nitrosyls	337
15.4.3.4	Cyclopentadienyl Metal Hydrides	339
15.4.3.5	Cyclopentadienyl Metal Halides	340
15.4.4	C ₆ H ₆ as a Ligand	342
15.4.4.1	Bis(arene)metal Complexes	343
15.4.4.2	Arene Metal Carbonyls	352
15.4.4.3	Other Complexes of the General Type (η^6 -ArH)ML _n	355
15.4.4.4	Benzene Cyclopentadienyl Metal Complexes	356
15.4.5	C ₇ H ₇ ⁺ as a Ligand	358
15.4.6	C ₈ H ₈ as a Ligand	361
	Excursion: Transition Metal NMR in Organometallic Chemistry	370
15.5	Metal π -Complexes of Heterocycles	376
15.5.1	Nitrogen-, Phosphorus- and Sulfur Heterocycles as Ligands	376
15.5.2	Boron Heterocycles as Ligands	380
15.5.3	Boron-Nitrogen Heterocycles	385
16	Metal—Metal Bonds and Transition Metal Atom Clusters	386
16.1	Formation and Criteria of Metal—Metal Bonds	386
16.2	Dinuclear Clusters	390
16.3	Trinuclear clusters	392
16.4	Tetranuclear Clusters	395
	Excursion: Structure and Bonding Conditions in Clusters, the Isolobal Analogy	396
16.5	Approaches to Systematic Cluster Synthesis	402
16.6	Pentanuclear and Higher Nuclearity Clusters	405
17	Organometallic Catalysis	411
17.1	Catalytic Reactions and the 16/18 VE Rule	412
17.2	Transition Metal Assisted Valence Isomerizations	415
	Excursion: Interaction of Transition Metal Fragments with Cyclopropanes	416
17.3	Isomerization of Unsaturated Molecules	418
17.4	Arylation/Vinylation of Olefins (Heck Reaction)	419
17.5	Alkene Metathesis	419
17.6	Oligomerization and Polymerization	421
17.7	Olefin Oxidation (Wacker Process)	425
17.8	Hydrogenation of Alkenes	427
17.9	Fischer-Tropsch Reactions	430
17.10	The Water-Gas Shift Reaction	432
17.11	Monsanto Acetic Acid Process	433
17.12	Hydroformylation (Oxo Reaction)	434
17.13	Hydrocyanation	438
17.14	Reppe Carbonylation	438
17.15	Activation of C—H Bonds in Alkanes – a Topical Problem in Organometallic Research	439

18 Literature	446
Appendix	463
Symbols and Abbreviations	463
Nomenclature of Organometallic Compounds	465
Author Index	468
Subject Index	483
